*Fairbairn Dam.* The *Queensland Grant (Maraboon Dam) Act* 1968 provided for grants to Queensland of up to \$20 million for the construction of a dam on the Nogoa River near Emerald.

*Copeton Dam.* Commonwealth grants up to \$20 million will be made to New South Wales under the *New South Wales Grant (Gwydir River Dam) Act* 1969 for the construction of a dam on the Gwydir River near Copeton.

*King River Dam.* Under the *Victoria Grant (King River Dam) Act* 1969 the Commonwealth is providing grants of up to \$4 million to Victoria for the construction of a dam on the King River south of Cheshunt.

*Tailem Bend to Keith Pipeline.* The construction of a pipeline and certain associated works to carry water from Tailem Bend to Keith in South Australia is being assisted financially by provision of grants up to \$6 million under the *South Australia Grant (Tailem Bend to Keith Pipeline) Act* 1969.

*Ord River Irrigation Project.* The *Western Australia (Ord River Irrigation) Act* 1968 provided for financial assistance to Western Australia on the basis of grants for dam construction and interest-bearing loans in respect of the irrigation works. Grants amounting to \$4,593,000 were paid during 1971-72.

*River Murray Salinity Reduction.* The *Victoria Grant (River Murray Salinity) Act* 1968 provides for grants to Victoria of up to \$3,600,000 for two salinity reduction projects on the River Murray.

*Cressy-Longford Irrigation Works, Tasmania.* Grants of up to \$750,000 to Tasmania for the construction of a channel system and associated works to carry water from the tailrace of the Poatina Power Station to supply rural holdings were provided for by the *Tasmania Grant (Cressy-Longford Irrigation Works) Act* 1969.

*Assistance to Primary Industry*

*Marginal dairy farms reconstruction.* Under the *Marginal Dairy Farms Agreement Act* 1970 the Commonwealth may provide financial assistance to the States of up to \$25 million to enable the States to acquire marginal dairy farms from their owners by agreement, and dispose of them so as to encourage the most practicable and economic use of the land. The States are required to repay half of the sum paid out by the Commonwealth under this scheme. Payments to the States in 1971-72 amounted to \$7,592,000.

*Rural reconstruction.* The *States Grants (Rural Reconstruction) Act* 1971 provides for the Commonwealth to make available up to \$100 million over the period ended 30 June 1975 to finance schemes for farm debt reconstruction, farm build-up, and rehabilitation for persons forced to leave rural industry. Three-quarters of the amount paid by the Commonwealth over the period of the scheme is to be repaid by the States. Payments under the scheme in 1971-72 amounted to \$40 million.

*Transport and communication**Roads projects*

The *Commonwealth Aid Roads Act* 1969 provided for principal and supplementary grants totalling \$1,252,050,000 to be paid to the States over the five-year period commencing on 1 July 1969. Supplementary grants totalling \$52,050,000 are to be made to South Australia, Western Australia and Tasmania to assist in the transition from arrangements under the 1964 Act and the principal grant of \$1,200 million is to be allocated specifically as follows: Urban-arterial and sub-arterial roads \$600,690,000; Rural-arterial roads \$186,760,000 and other rural roads \$394,550,000; and planning and research \$18,000,000. Total grants of \$1,252,050,000 payable in the five-year period from 1969-70 to 1973-74 are to be allocated on the following basis: New South Wales, \$380,400,000; Victoria, \$254,400,000; Queensland, \$231,600,000; South Australia, \$129,000,000; Western Australia, \$200,400,000; and Tasmania, \$56,250,000. In addition, the Commonwealth has agreed to provide up to \$2.5 million to South Australia towards the cost of completing the sealing of the Eyre Highway. For details of previous legislation *see* earlier year books.

*Beef cattle roads.* The *States Grants (Beef Cattle Roads) Act* 1968 provided for grants of \$39,500,000, \$9,500,000, and \$1,000,000 for Queensland, Western Australia, and South Australia respectively for a programme of beef cattle road construction over a period of seven years commencing from 1 July 1967.

*Railway projects*

The Commonwealth is continuing to make grants to South Australia and Western Australia under its railway standardisation agreement with those two States. In addition, from 1971-72 onwards \$1.75 million was made available to Tasmania to meet part of the cost of the construction of a new rail link between Nelsons Creek and Bell Bay, and the upgrading of the existing rail track between Launceston and Nelsons Creek and associated works.

*Harbours*

The Commonwealth has agreed to provide financial assistance to Tasmania of \$1.4 million towards the construction of port facilities at Grassy Harbour, King Island.

*Other functions*

*Housing.* With the termination of the Commonwealth-State Housing Agreement, States' borrowings through the Loan Council are to be supplemented by: (i) cumulative grants of \$2.75 million a year payable for 30 years in respect of each of the years from 1971-72 to 1975-76 to replace interest concessions under the old agreement, the total sum over 30 years is to aggregate \$412.5 million; (ii) non-cumulative grants of \$1.25 million each year for the next five years, a total of \$6.25 million, for reducing rents of dwellings for families considered to have insufficient means to pay the rents ordinarily payable to State authorities in respect of these dwellings.

*Aboriginal Advancement.* The *States Grants (Aboriginal Advancement) Acts* 1969, 1970 and 1971 provided for the payment to the States of grants totalling \$9.2 million in 1971-72 and an estimated \$14.5 million in 1972-73 for Aboriginal advancement particularly in the fields of housing, education and health.

*Development of Exmouth township, Western Australia.* The Commonwealth has assisted the Western Australian Government in financing the cost of developing a township at Exmouth in connection with the United States Naval Communications Station established at North West Cape.

*Other specific purpose grants*

*Contributions under Financial Agreement.* Details of the Financial Agreement between the Commonwealth and the States are given in Year Book No. 37, pages 685-90. Under this Agreement the Commonwealth undertook to contribute \$15,169,824 per annum towards interest payable on the State loan securities for a period of 58 years from 1 July 1927. This amount is distributed among the States as follows: New South Wales, \$5,834,822; Victoria, \$4,254,318; Queensland, \$2,192,470; South Australia, \$1,407,632; Western Australia, \$946,864; Tasmania, \$533,718. In addition, under the Financial Agreement the Commonwealth agreed to make certain contributions to the National Debt Sinking Fund for redemption of State loan securities. Details of these are given on page 609 of this chapter.

*Debt Charges Assistance.* As part of the revised revenue assistance arrangements to apply over the five years 1970-71 to 1974-75 the Commonwealth is providing the States with grants to finance increasing portions of the interest and sinking fund charges on certain State debt amounting to \$1,000 million. The grants, which are authorised by the *States Grants (Debt Charges Assistance) Act* 1970 totalled \$11,504,000 in 1970-71 and will increase by that sum each subsequent year. Over the five years 1970-71 to 1974-75, the total assistance provided will amount to \$172,560,000.

#### Advances to the States

The following tables show figures of advances to the States and repayments of advances. More detailed figures appear in *Public Authority Finance: Commonwealth Authorities*.

(a) From 1971-72 this item includes only advances to the States in respect of the cost of erection of houses for military personnel. Other funds for housing are obtained by the States under the State Loan program. (b) Comprised mainly of States' deposits with the National Debt Sinking Fund.

Minus sign (—) denotes excess of repayments.

Details of some of the more important State projects for which the Commonwealth is providing financial assistance by way of advances are set out below.

**Development of resources and assistance to industry**

*Water resources projects*

*Blowering Reservoir, New South Wales.* The Blowering Reservoir was constructed at the expense of the State of New South Wales mainly by the Snowy Mountains Hydro-electric Authority, and the Commonwealth has financed half the cost in the form of repayable interest-bearing loans to that State.

Under the *Western Australia (South-west Region Water Supplies) Agreement Act 1965-1971*, the Commonwealth is providing financial assistance of up to \$12,000,000 by way of interest-bearing loans to Western Australia to accelerate works undertaken by the State to extend the comprehensive water supply scheme in the south-west portion of the State.

*Chowilla and Dartmouth Reservoirs.* Under the River Murray Waters Agreement the Commonwealth provided assistance in the form of interest-bearing loans amounting to \$1,500,000 to meet the capital costs of the Chowilla Reservoir. Because of significant increases in the estimated cost of the project, it was decided in August 1967 to suspend work on it. Further investigations then followed, including a re-assessment of the likely yield from both Chowilla and alternative storages on the Upper Murray and Mitta Mitta Rivers. Following this re-assessment, the River Murray Commission in February 1969 agreed that a 3,000,000 acre feet storage at Dartmouth on the Mitta Mitta River provided the greatest overall benefits in terms of cost and yield and should be the next development of the resources of the River Murray. The estimated cost of the Dartmouth Dam is \$64 million, and the Commonwealth is making advances to the three States concerned (New South Wales, Victoria and South Australia) amounting to fifty per cent of each of their one-quarter share of the construction costs. The Commonwealth itself will make its own quarter contribution of the cost of the project. No payments have yet been made to the States, but it is estimated the \$500,000 will be paid to each of the three participating States in 1972-73. (Further information can be found in Chapter 23, Water Conservation and Irrigation).

#### *Rural industries development projects*

*Brigalow lands.* Under the Brigalow Lands Agreement Acts, Commonwealth advances to the State of Queensland for specified works associated with the production of beef cattle and other primary products in the Fitzroy River Basin and the supply of beef for export were fixed at an overall limit of \$23 million. Repayments over a twenty-year period commenced in 1968 in respect of advances made prior to 1 July 1967 and in 1971 in respect of advances made after 1 July 1967.

*Softwood forestry.* The *Softwood Forestry Agreements Act* 1967 authorised the Commonwealth to provide assistance during the five years ending 30 June 1971 for increased planting of softwood forests. Total assistance of the order of \$17.7 million is in the form of interest-bearing loans repayable over twenty-five years.

#### *Transport and communication*

*Railway projects.* The Commonwealth is continuing to make advances to South Australia and Western Australia to finance 30 per cent of the cost associated with railway standardisation in those States. In 1971-72, \$2.5 million was made available to Tasmania to finance railway extensions and up-grading in that State.

*Natural gas pipeline, South Australia.* Under the *Natural Gas Pipeline (South Australia) Agreement Act* 1967 the Commonwealth is providing a maximum of \$15 million by way of interest-bearing loans to help finance the construction of a pipeline to transport gas from natural gas fields at Gidgealpa and Moomba.

#### *Power, fuel and light*

The *Tasmania Agreement (Hydro-Electric Power Development) Act* 1968 provided for interest-bearing loans with an overall limit of \$47 million to Tasmania for the financing of a five-year programme of accelerated hydro-electric development based on the commencement of development of the Gordon River area in the south west of the State.

## **Main components of receipts**

The main components of the receipts of Commonwealth authorities are taxation, income of public enterprises and other factor income transfers, and borrowing and financing transactions. Taxation constitutes by far the major source of receipts. Borrowing is now of minor significance so far as Commonwealth authorities are concerned, although, as may be seen in later tables, it has become an increasingly significant source of funds for the States. The realisation of the increasing commitment of State revenues to the servicing of a rapidly growing debt burden led to the arrangement agreed to at the 1970 Premiers' Conference whereby the Commonwealth now makes interest-free capital grants to the States in lieu of moneys previously obtained by the States from borrowings (*see* page 560).

In what follows, an account is given of the system of Commonwealth taxation, and some details are given of the current operations of Commonwealth public enterprises. Borrowing and other financing activities of Commonwealth authorities are dealt with for convenience in a later section relating to the debt of all public authorities.

#### **Commonwealth taxation—summary**

The following tables show Commonwealth taxation receipts classified by type of tax for the years 1967-68 to 1971-72, and the proportion of each type to total collections.

### Taxes on income

A description of the development of income taxes in Australia appeared in Year Book No. 35, page 926. Since July 1942 the Commonwealth, under the uniform tax arrangement, has been the only authority imposing taxes on income.

The laws dealing with the assessment and imposition of Income tax at 30 June 1972 were — *Income Tax Assessment Act 1936-1972*, *Income Tax Act 1971-1972*, *Income Tax (Non-Resident Dividends and Interest) Act 1967*, *Income, Tax (Drought Bonds) Act 1969*, and the *Income Tax Regulations*. The second-mentioned Act is an annual measure, and its primary purpose is to declare the rates of tax payable for the financial year.

Both individuals and companies are liable for income tax. Private companies are subject to tax on undistributed income in addition to the primary income tax levied on all companies.

The operation of the *Income Tax Assessment Act* 1936–1972 is affected by the following Acts:

- (a) *Taxation Administration Act* 1953–1968, which provides for the administration of certain Acts relating to taxation;
- (b) *Income Tax (International Agreements) Act* 1953–1972 which gives the force of law to comprehensive double taxation agreements between the Commonwealth and the Governments of the United Kingdom, the United States of America, Canada, New Zealand, Singapore and Japan. This Act also gives the force of law to an agreement with the Government of France for the avoidance of double taxation on income derived from international air transport. An agreement with Italy dealing with airline profits has been signed, but has not yet been given the force of law.
- (c) *Diplomatic Privileges and Immunities Act* 1967 which provides for the exemption from income tax of certain income of diplomatic representatives, their staff and families.
- (d) *International Organisations (Privileges and Immunities) Act* 1963–1966, and Regulations made under that Act, which provide for exemption from income tax of certain incomes of international organisations and their officials;
- (e) *Loan (Drought Bonds) Act* 1969 which authorises the issue of drought bonds and empowers the Commissioner of Taxation to declare when drought bonds shall become redeemable.

Individuals with incomes in excess of \$1,040, non-profit companies with total incomes in excess of \$416, and all other companies, partnerships and trusts deriving income are required to lodge returns of income each year.

Where applicable, income tax payable is assessed and assessment notices showing the amounts payable are issued during the year following the year of income. For individuals the approximate amount payable, however, has already been collected during the income year (from employees by deductions from salary or wages and from non-employees by a provisional tax). The amount shown on the assessment notice is therefore adjusted against the amount already paid and any difference either collected or refunded.

#### **Taxes on income—individuals**

##### *Pay-as-you-earn-system*

*Salary and wage earners* are subject to tax instalment deductions by employers according to a prescribed scale which shows the amount to be deducted according to income and number of dependants. Under the group employer scheme of deduction (covering most employers of more than ten persons), the amount deducted is required to be regularly remitted to the Commonwealth Taxation Office.

Not later than 14 July each year employers are required to supply each employee with a group certificate showing amount earned and deductions made during the year ended 30 June.

Under the stamp scheme used by employers other than group employers, a stamp deduction sheet in two parts is used. Each four weeks the employer purchases stamps (also in two parts) for the amount of deductions made each pay day and sticks one part on each half of the sheet. At the end of the year the employer gives the employee one half of the sheet and sends the other half to the Taxation Office. The employee's half is then used in the same way as a group certificate.

*Individuals with taxable income of \$400 or more from other than salary or wages* may be required to pay provisional tax in respect of that income. Collection of provisional tax for the current year is made at the same time as collection and assessment for the previous year are adjusted. The notice of assessment shows an amount of provisional tax for the current year. The provisional amount is intended as an approximation to the tax which will be assessed after the return of income for the current year has been lodged. It is ascertained by assuming that the income of the current year will be the same as that for the previous year and applying to that income the rates for the current year. The assessment notice shows the provisional tax paid in the previous year as a credit against the tax assessed on the basis of the return for that year.

##### *Assessable income*

Assessable income includes all income, other than exempt income, derived directly or indirectly from sources in Australia and, in the case of resident taxpayers, includes income from sources outside Australia.

Income includes certain other receipts declared by the Assessment Act to be assessable income. Receipts such as gifts (other than gratuities received by an employee from his employer in the course of his employment), legacies, profits from the sale of property (not acquired for the purpose of profit making by sale), lottery wins, and most capital gains are not regarded as income and are not assessable.

Certain types of income are exempt from tax, the more important being (i) war and service pensions (ii) age and invalid pensions, child endowment and other payments under the *Social Services Act* 1947-1972 and the *Tuberculosis Act* 1948, (iii) income from gold-mining and some other mining operations, (iv) twenty per cent of certain mining profits, (v) dividends paid out of exempt mining profits, (vi) income received from a scholarship, bursary or other educational allowance, (vii) income of certain non-profit institutions and mutual income of some other organisations, (viii) income of specified superannuation funds, (ix) pay, allowances and bounties for part-time duty, and gratuity payable on a call out for continuous full-time service of members of the Defence Force Emergency Reserves, and (x) pay and allowances of members of the Defence Forces while allotted for duty in special areas (e.g. part of Borneo and adjacent waters, and South Vietnam).

Expenditure incurred in producing assessable income or in carrying on a business is an allowable deduction, except to the extent that it is of a capital, private, or domestic nature, or is incurred in producing exempt income. Subscriptions to certain business associations and trade union dues are also allowable deductions.

Special deductions for both resident and non-resident taxpayers include such items as trading losses incurred in previous years, bad debts, depreciation, annual rates and land taxes paid, gifts to various institutions, certain expenditure on scientific research, and, subject to certain conditions, one-third of amounts paid as calls to mining, prospecting, oil prospecting, or afforestation companies operating in Australia. In lieu of the one-third deduction for calls, capital subscribed to companies engaged in exploration or mining for petroleum and certain other minerals in Australia or Papua New Guinea may, in certain circumstances, be deductible in full.

Special deductions may be allowed for certain expenditure of a capital nature incurred in mining or prospecting operations conducted for the purpose of earning assessable income and in the provision of certain transport facilities necessary for and directly related to those operations. In the case of primary producers certain developmental expenditure of a capital nature may be deducted. Deductions in addition to depreciation are allowed to manufacturers (except for equipment purchased during the period 4 February 1971 to 13 February 1972 inclusive) and primary producers by way of an investment allowance for expenditure on specified plant and equipment. In addition, deductions may be allowed to primary producers for the cost of purchasing drought bonds. Subject to a maximum permissible tax saving, a special rebate is allowed for certain expenditure on export market development. The rebate is in addition to any normal deduction for the expenditure allowed as a business expense.

Residents of Zone A and Zone B, prescribed isolated areas subject to uncongenial climatic conditions and high costs of living are entitled to a zone allowance deduction. Members of the defence forces serving in certain overseas localities, are entitled to a deduction of the same amount as residents of Zone A.

### *Concessional deductions*

Concessional allowances to residents for dependants, medical and dental expenses, life insurance, superannuation contributions, etc. are made as a deduction from income. The maximum deduction allowed for the income year 1972-73 for each dependant or for a housekeeper is shown below.

<i>Dependant, etc. (resident)</i>	<i>Maximum deduction(a)</i>
	\$
Spouse, daughter-housekeeper(b); housekeeper(c); parent or parent-in-law . . . . .	364
One child under 16 years of age; invalid relative(d); student child 16 to under 25 years of age	260
Other children under 16 years of age . . . . .	208

(a) If the dependant is maintained for part only of the year, a partial deduction is allowed. (b) Of a widower or widow. (c) Caring for a spouse in receipt of an invalid pension, or caring for children under 16 years of age of a widower or widow. (d) Child, step-child, brother or sister over 16 years of age.

If a dependant derives separate net income, which includes age or invalid pension but not child endowment, the deduction is reduced by the amount, by which the separate net income exceeds \$130. Scholarships are excluded except insofar as they relate to maintenance.

Medical expenses (less amounts recouped from hospital and medical funds) paid by a resident taxpayer in respect of himself, his spouse, children under 21 years of age and dependants for whom concessional deductions are allowed, are allowed as a concessional deduction. These expenses include payments to a legally qualified medical practitioner, dentist, nurse or chemist, or hospital, in respect of an illness or operation, therapeutic treatment or eye tests, expenditure on medical or surgical appliances, artificial limbs or eyes, hearing aids and spectacles, payment of an attendant of a blind or bed-ridden person or for the maintenance of a trained dog used by a blind person.

Other concessional deductions allowed to resident taxpayers include: (i) payments of life insurance premiums and contributions to superannuation funds and friendly societies, (maximum \$1,200), (ii) payments to medical or hospital funds, (iii) funeral expenses (maximum \$100 for each dependant), (iv) expenditure incurred for the full-time education of children less than twenty-five years of age (maximum \$400 for each child), (v) subscriptions to trade, business or professional associations or unions (maximum \$42 to each), and (vi) self-education expenses paid by the taxpayer for the purpose of gaining qualifications for use in carrying on a profession or business, or in the course of employment.

#### *Effective exemption from tax*

For the income years from 1963–64 to 1971–72 inclusive, the income of a taxpayer without dependants was exempt from income tax if it did not exceed \$416. For 1972–73 the income of a taxpayer without dependants was exempt from income tax if it did not exceed \$1,040. The effect of deductions for dependants was to exempt resident taxpayers up to the incomes shown in the samples hereunder.

#### RESIDENT TAXPAYERS: EFFECTIVE EXEMPTIONS FROM INCOME TAX (\$)

<i>Income years ended June—</i>	<i>Taxpayer with—</i>		<i>Wife and—</i>			
	<i>No dependants</i>	<i>Wife only</i>	<i>one child</i>	<i>two children</i>	<i>three children</i>	<i>four children</i>
1964 to 1967 . . . .	416	702	884	1,014	1,144	1,274
1968 to 1972 . . . .	416	728	936	1,092	1,248	1,404
1973 . . . . .	1,040	1,404	1,664	1,872	2,080	2,288

Special provisions applying for the 1972–73 income year to *resident aged persons* (i.e. men aged 65 years or more or women aged 60 years or more) were:

#### *(A) Single Persons Age Allowance Provisions*

<i>Taxable Income \$</i>	
Up to 1,326	No income tax payable
	<i>Income Tax limited to:</i>
1,327–1,532	16½ per cent of taxable income over \$1,326
1,533–2,080	\$34.33 plus 18 per cent of taxable income over \$1,532
2,081–2,132	\$132.97 plus 45 per cent of taxable income over \$2,080
2,133–2,202	\$156.37 plus 66½ per cent of taxable income over \$2,132

#### *(B) Married Couples Age Allowance Provisions*

<i>Combined Taxable Income(a) \$</i>	
Up to 2,314	No income tax payable
	<i>Income Tax limited to:</i>
2,315–2,500	16½ per cent of taxable income over \$2,314
2,501–3,000	\$31.00 plus 31 per cent of taxable income over \$2,500
3,001–3,640	\$186.00 plus 40 per cent of taxable income over \$3,000
3,641–3,744	\$442.00 plus 45 per cent of taxable income over \$3,640
3,745–3,871	\$488.80 plus 66½ per cent of taxable income over \$3,744

(a) Where a spouse has no taxable income the 'combined taxable income' is regarded as equal to the taxable income of the taxpayer.

#### *Rates of income tax on individuals*

The table on page 570 shows the rates of income tax for income years 1954–55 to 1972–73 as set out in the First Schedule to the Income Tax Act.

Assessable income represents total actual income minus exempt income. Taxable income is the amount remaining after all allowable deductions have been made on assessable income.

Where the taxable income of a person does not exceed \$1,120 the amount of income tax payable is limited to two-thirds of the excess of the taxable income over \$1,040. The tax so ascertained is reduced by any rebate or credit to which the taxpayer is entitled.

The only cases in which incomes below \$1,040 attract tax are those for which special rates are payable in accordance with certain sections of the Income Tax Assessment Act.

For *primary producers* the rate of income tax for the current year is, in general, determined by the average of the taxable incomes for the five years up to and including the current year. In 1951 a taxpayer was given the right to elect not to have the averaging provisions applied but up to 1965-66 income year the election, if made under then existing legislation, was irrevocable. The *Income Tax Tax Assessment Act* 1966 amended this and a primary producer who, prior to the 1966-67 income year, elected to withdraw from the averaging system, was able to review that decision, being permitted to return to the averaging system provided that the necessary election was made in respect of any one of the income years 1966-67 to 1969-70. In the year of re-entry the taxpayer would be treated for averaging purposes as though he had never withdrawn from the system. However, with existing legislation, he will not have the right to withdraw again. The application of the averaging provisions is limited to that part of the taxable income which does not exceed \$16,000. When the taxable income does exceed \$16,000, the balance is taxed at ordinary rates applicable to that part. When the taxable income is less than \$16,000, the rate of tax for averaging purposes is limited to the rate on a taxable income of \$16,000.

The taxable income, including abnormal receipts, of *actors, artists, inventors*, etc. is taxed at the rate appropriate to the normal taxable income plus one-third of the abnormal receipts.

Interest derived from bonds, etc. issued between 1 January 1940 and 31 October 1968 by the Commonwealth, or on certain State semi-government loans issued free of State income tax, is subject to a rebate of income tax of 10 cents for each \$1 of interest received. The rebate does not apply to interest received from bonds, etc., issued on or after 1 November 1968.

#### COMMONWEALTH INCOME TAX—INDIVIDUALS: GENERAL RATES, 1954-55 TO 1972-73 INCOME YEARS

32,000	40,000					8,826.50	66.70	8,448.70	64.0
40,000	upwards	16,835.83	66.67	16,830.50	66.70			21,248.70	66.7

(a) For the 1959-60 and 1961-62 to 1963-64 income years a rebate of 5 per cent was allowable on the tax calculated from this schedule. (b) Additional tax equal to 2.5 per cent of the tax calculated from this schedule was also payable. (c) Additional tax equal to 2.5 per cent and 4.375 per cent of the tax calculated from this schedule was also payable for 1970-71 and 1971-72 respectively.

*Income tax payable on specified incomes*

The following table shows, for the income years 1964-65 to 1972-73, the actual income tax payable by taxpayers with various incomes and numbers of dependants without regard to any rebate or refund which may apply.

**COMMONWEALTH INCOME TAX PAYABLE ON SPECIFIED INDIVIDUAL INCOMES

(a) Assessments in respect of 1970-71 incomes issued to 30 September 1972. Assessments issued after that date are not included. (b) Net income is 'Total assessable income less total deductions for expenses incurred in gaining assessable income'. (c) Taxable income is the income remaining after deducting from assessable income all allowable deductions.

Details of the number of individual taxpayers and net income tax assessed by grades of income for the income years 1967-68 to 1970-71 are shown in the following table.

**COMMONWEALTH INCOME TAX ASSESSMENTS: TAXABLE INDIVIDUALS, BY GRADE OF INCOME(a) (INCOME YEARS 1967-68 TO 1970-71)**

Grade of income(a)	1967-68		1968-69		1969-70		1970-71

<b>Total</b>	<b>5,001,174</b>	<b>1,986,843</b>	<b>5,204,042</b>	<b>2,317,982</b>	<b>5,372,501</b>	<b>2,678,970</b>	<b>5,570,721</b>	<b>2,934,618</b>

(a) Actual income for 1967-68 to 1969-70; net income for 1970-71. Actual income is 'gross income including exempt income less expenditure incurred in gaining that income'. Net income is 'Total assessable income less total deductions for expenses incurred in gaining that income'.

### Partnerships and trusts

Income tax returns are required to be lodged on behalf of partnerships and trusts which, as partnerships and trusts, are not required to pay tax except in certain specified circumstances when they may be assessed as individuals. In general, the net income remaining, after allowing all deductions including expenditure incurred in gaining the income, is distributed to the partners or beneficiaries concerned and is assessable for tax in the respective individual returns.

The following table shows for the 1970-71 income year numbers, total business income and net income of partnerships and trusts. Greater detail is published in annual bulletin *Commonwealth Taxation Assessments*.

### PARTNERSHIPS AND TRUSTS—INCOME YEAR 1970-71

Item	Partnerships	Trusts	Total
Number . . . . .	399,434	107,685	507,119
Total business income . . . \$'000	5,970,244	79,016	6,049,260
Net income . . . . . \$'000	1,959,038	215,090	2,174,128

**Taxes on income—companies**

For taxation purposes companies are divided into two main groups—private and public. Broadly, a private company is defined as a company in which all the issued shares are held by not more than twenty persons, or which is capable of being controlled by not more than seven persons, and which is not a company in which the public is substantially interested, or is a subsidiary of a public company. All other companies are regarded as public companies. Both private and public companies pay primary tax assessed on a taxable income ascertained on the same principles as for individuals.

Dividends received are assessable income; resident companies, however, receive a rebate at the average rate on the amount of dividends included in the taxable income, while this rebate is not allowed to non-resident companies.

A private company is liable to pay additional tax upon the amount, if any, by which the dividends paid by the company within a prescribed period fall short of sufficient distribution as defined.

*Rates of tax.* The rates of primary income tax for all companies and additional tax for private companies applicable to income years 1959–60 to 1971–72 are shown in the following table.

**RATES OF INCOME TAX: COMPANIES, 1959-60 TO 1971-72 INCOME YEARS**  
(Cents per \$)

Income years ended June	Resident private company			Resident public company(a)		Non resident company			
	On taxable income		Additional tax on undistributed income	On taxable income		On dividends income		On other income	
	Up to \$10,000	On remainder		Up to \$10,000	On remainder	Up to \$10,000	On remainder	Up to \$10,000	On remainder
1960 to 1963	25	35	50	35	40	30	40	35	40
1964 to 1967	27.5	37.5	50	37.5	42.5	32.5	42.5	37.5	42.5
1968 and 1969	30	40	50	40	45	35	45	40	45
1970	32.5	42.5	50	42.5	47.5	37.5	47.5	42.5	47.5
1971 and 1972	37.5	42.5	50	47.5	47.5	42.5	47.5	47.5	47.5

(a) Excludes co-operative, non-profit and life insurance for which the rates of tax (in cents per \$) for 1971–72 income year were:

Type of company	Taxable income	
	Up to \$10,000	On remainder
Co-operative	42.5	47.5
Non-profit—Friendly societies' dispensaries	37.5	37.5
Other	42.5	47.5
Mutual life insurance	37.5	42.5
Other life insurance—Mutual income	37.5	42.5
Other income	47.5	47.5

A non-profit company is not liable to income tax unless the taxable income exceeds \$416. Where the non-profit company is a friendly society dispensary and the taxable income does not exceed \$1,664 the maximum amount payable is one-half of the excess over \$416 less any rebate or credit to which the company is entitled. Where the taxable income of a non-profit company other than a friendly society dispensary does not exceed \$1,830, the tax payable by the company is limited to 55 per cent of the amount by which the taxable income exceeds \$416 less any rebate or credit to which the company is entitled. Other companies are assessed for income tax if the taxable income is \$1 or more.

Details in respect of company income tax assessments for the 1970-71 income year are shown in the following table.

**COMMONWEALTH INCOME TAX ASSESSMENTS: RESIDENT AND NON-RESIDENT COMPANIES, BY GRADE OF INCOME AND OFFICE OF ASSESSMENT**

(Income derived in the year 1970-71)

*Income tax assessed.* The amounts of income tax covered by statistical analyses of assessments for recent years are shown in the following table. The amounts are shown under the year of income of the taxpayer. Tax is usually paid by companies in the year following the year of income. Individuals pay tax in the year of income, but there is usually an adjustment in the following year. Tax assessed after the close of the normal assessing period (fifteen months after the close of the income year for individuals and eighteen months for companies) is not included.

## COMMONWEALTH INCOME TAXES ASSESSED: INCOME YEARS 1966-67 TO 1970-71 (\$'000)

Tax	1966-67	1967-68	1968-69	1969-70	1970-71

<b>Total . . . . .</b>	<b>2,671,422</b>	<b>3,004,504</b>	<b>3,474,418</b>	<b>4,108,925</b>	n.a.

*Refunds of revenue.* Income tax collections, as previously shown, are net amounts after refunds of revenue made in the course of the year. Refunds are of two types—those charged to special appropriations under authority of the Income Tax Assessment Act and those charged to special appropriations under authority of the Audit Act. Income tax instalment refunds, by far the greatest part of income tax refunds, are made when the instalments deducted during the year exceed the tax assessed on incomes for that year. Refunds made from special appropriations under section 37A of the Audit Act include refunds of moneys paid to the revenue in error, refunds of tax overpaid, refunds due to the amendment of assessments, etc. Refunds of income tax to individuals during the collection years 1967-68 to 1971-72 were: 1967-68, \$398,371,000; 1968-69, \$477,965,000; 1969-70, \$514,065,000; 1970-71, \$594,748,000, and 1971-72, \$697,057,000.

**Estate duty**

Under the *Estate duty Assessment Act 1914-1970* estate duty is assessed on the net value of the estate less a statutory exemption determined in accordance with the following formula: (a) where the whole of the estate passes to the widow, widower, children (including adopted children, step-children and ex-nuptial children) or grandchildren of the deceased person: (i) for qualifying estates of deceased primary producers—\$24,000; (ii) for other estates—\$20,000; decreasing by \$2 for every \$8 by which the value of the estate exceeds \$24,000 or \$20,000 as the case may be; (b) where no part of the estate passes to the relatives mentioned in (a): (i) for qualifying estates of deceased primary producers—\$12,000; (ii) for other estates—\$10,000; decreasing by \$2 for every \$8 by which the value of the estate exceeds \$12,000 or \$10,000 as the case may be; and (c) where part only of the estate passes to the relatives mentioned in (a): an amount calculated proportionately under (a) and (b) above.

As a general rule, the estate of a deceased primary producer would qualify for the higher level of statutory exemption if: (i) the death occurred on or after 25 September 1969; (ii) the deceased person was domiciled in Australia at the time of his death; (iii) during the period of five complete income tax years preceding death, more than one-half of the deceased person's gross income was derived from the carrying on by him of a primary production business in Australia; and (iv) the gross value of rural property in Australia—being land and certain other types of assets used in a primary production business such as livestock and agricultural plant—exceeded the gross value of all other property in the estate. In specified circumstances, dividends and certain other receipts from a family proprietary company in which a deceased person held shares may be treated as income derived from the carrying on by him of a primary production business and the value of the shares may be included, either wholly or in part, in the value of the estate's rural property.

Special exemptions are also allowed in respect of estates of defence personnel who die on active service or within three years of termination of their active service from injuries received or diseases contracted while on active service, and prescribed personal property held in Australia by certain United States personnel who are in Australia solely for purposes connected with projects of the United States Government.

A 'quick succession' rebate of estate duty may be allowable if the deceased was a beneficiary in an estate (upon which duty is payable or has been paid) of a person who pre-deceased him by not more than five years.

A 'rural property' rebate of part of any estate duty attributable to rural property included in the estate of a deceased primary producer may be allowable if the value of the estate (before deducting any statutory exemption) is less than \$250,000 and certain conditions are satisfied. The conditions are the same as those governing entitlements to higher levels of statutory exemptions for estates of deceased primary producers, as outlined in the explanations relating to statutory exemptions. If the value of a qualifying estate does not exceed \$140,000, the rebate is fifty per cent of any duty attributable to rural property in Australia. Rates of rebate gradually reducing from fifty per cent are applicable to estates having net values between \$140,000 and \$250,000.

The rates of duty have remained unchanged since 1941 and increase as the value of the estate for duty increases, as follows: does not exceed \$20,000, 3 per cent; \$20,001 to \$40,000, 3 per cent to 6 per cent; \$40,001 to \$240,000, 6 per cent to 26 per cent; \$240,001 to \$1,000,000, 26 per cent to 27.9 per cent; \$1,000,000 or more, 27.9 per cent.

Particulars of the number and value of dutiable estates and duty assessed, for each of the assessment years 1967-68 to 1971-72 are given in the following table.

COMMONWEALTH ESTATE DUTY ASSESSMENTS, 1967-68 TO 1971-72

	1967-68	1968-69	1969-70	1970-71	1971-72

Average duty assessed per estate \$	3,983	4,541	5,097	4,881	3,877

(a) Debts, Exempt Estate and State Probate Succession Duties.

### Gift duty

The *Gift Duty Act* 1941–1966 and the *Gift Duty Assessment Act* 1941–1967 impose a gift duty on gifts which are defined as dispositions of property made otherwise than by will, without adequate consideration in money or money's worth. There is a liability on both the donor and the donee to furnish a return, and both are jointly and severally liable for payment of the duty. However, if a return is furnished by the donor, the donee is relieved of this obligation.

Certain exemptions from duty are provided, the more important being: payments to an employees' superannuation or like fund; retiring allowances or gratuities granted to employees; gifts to organisations not carried on for the profit of any individual; gifts to the Commonwealth or a State; and small gifts not exceeding \$100.

The rate of gift duty applicable to any particular gifts is fixed by reference to the total value of all gifts made by the same donor within the period of eighteen months before and eighteen months after the time of making that gift. Where the total value of all gifts as defined does not exceed \$4,000 no duty is payable; The present rates of duty are (a) \$4,001 to \$20,000, 3 per cent provided that the gift duty payable shall not exceed one half of the amount by which the gift exceeds \$4,000 or a proportionate amount where more than one gift is involved; (b) \$20,001 to \$40,000, 3 per cent to 6 per cent; (c) \$40,001 to \$240,000, 6 per cent to 26 per cent; (d) \$240,001 to \$1,000,000 and over, 26 per cent to 27.9 per cent.

Particulars of the number of gift duty assessments, value of gifts as assessed and duty assessed for each of the assessment years 1967–68 to 1971–72 are given in the following table.

COMMONWEALTH GIFT DUTY ASSESSMENTS, 1967-68 TO 1971-72

	1967-68	1968-69	1969-70	1970-71	1971-72

Duty assessed . . . „	8,701	9,501	8,399	7,796	9,878

### Australian Capital Territory Stamp Duty and Tax

*Stamp duty and tax* on a range of instruments and transactions connected with the Australian Capital Territory, including Jervis Bay, came into operation on 1 July 1969.

The *Australian Capital Territory Taxation (Administration) Act* 1969 provides for the administrative procedures necessary for assessment and collection of duty and tax.

Six additional Acts specify the range of dutiable instruments or transactions subject to duty or tax which are as under:

*Cheques and other bills of exchange and promissory notes:* Five cents on each.

*Hire purchase agreements:* 1½ per cent of the purchase price (if over \$100) after excluding any deposit and any terms or insurance charges.

*Insurance business:* Five per cent of premiums other than for life assurance, third party motor vehicles insurance or workers' compensation insurance.

*Sales and purchases of marketable securities:* Effected through a broker for full sale value; Up to \$100–7 cents for each \$25.00 or part thereof. Over \$100–30 cents for each \$100 or part thereof.

The rate applies to the sale price and/or purchase price payable by the seller and purchaser respectively.

Transfer of marketable securities not through a broker; 15 cents for every \$25.00 of the value or part thereof.

*Leases and realty:* Transfer of interest in Crown lease for a period of 5 years or realty: \$1.00 for every \$100 or part thereof of its value. Transfer of other leases: \$1.00 for every \$100 or part thereof of the consideration paid.

Grant of lease (not Crown lease): 30 cents for every \$100 rent or part thereof and if any other consideration not being rent—\$1.00 for every \$100 or part thereof of that other consideration.

A general exemption is provided from all duties for public hospitals, public benevolent institutions, religious institutions and public educational institutions. The total amount collected as Australian Capital Territory Stamp Duty and Tax was \$2,475,000 in 1970–71, \$2,561,000 in 1971–72 and \$3,589,000 in 1972–73.

### Customs duties

A description of the Commonwealth Customs Tariff System is given in Chapter 11, Overseas Transactions. Details of duties collected on the import of commodities classified in accordance with the "Brussels Nomenclature" are given in the following table.

**CUSTOMS DUTIES ACCORDING TO BRUSSELS TARIFF DIVISIONS, 1967-68 TO 1971-72**  
(\$'000)

<i>Brussels Tariff Division</i>	<i>Source of receipts</i>	<i>1967-68</i>	<i>1968-69</i>	<i>1969-70</i>	<i>1970-71</i>	<i>1971-72</i>
1	Live animals; animal products . . . . .	911	1,164	1,208	1,251	1,113

<b>Total</b> . . . . .	<b>855,168</b>	<b>902,307</b>	<b>939,283</b>	<b>1,053,460</b>	<b>1,212,925</b>

The quantities of commodities on which excise duty were paid are given in Chapter 11, Overseas Transactions, page 315.

**Sales Tax**

The general rate of tax levied on all goods other than those specified in the schedules to the *Sales Tax (Exemptions and Classifications) Act* 1935-1970 is 15 per cent and goods subject to special rates are taxed at either 2.5 per cent or 27.5 per cent. Prior to 19 August 1970 these special rates were 2.5 per cent and 25 per cent.

Particulars of the net amount of sales tax payable and the sales of taxable and exempt goods in each State for 1971-72 are given in the following table. The figures relate to sales during the period 1 July to 30 June. The figures for sales tax payable differ from those for net collections shown on page 566 because the latter include some adjustments in respect of earlier tax years and relate to tax payable on returns lodged during the year, which in general cover sales for the period June to May.

**COMMONWEALTH SALES TAX AND AMOUNT OF SALES: STATES AND TERRITORIES**

Sales of exempt goods by registered persons . . . . .	4,448,868	2,790,636	1,628,133	750,766	775,173	261,794	45,008	10,700,379
<b>Total sales of taxable and exempt goods</b>	<b>6,275,662</b>	<b>4,058,554</b>	<b>2,154,542</b>	<b>1,059,842</b>	<b>1,088,367</b>	<b>337,283</b>	<b>53,548</b>	<b>15,027,799</b>
Sales tax payable . . . . .	290,624	191,350	82,908	49,842	50,453	12,266	1,422	678,866

Sales of taxable and exempt goods and sales tax payable for Australia are shown in the following table for the years 1967-68 to 1971-72.

**COMMONWEALTH SALES TAX AND AMOUNT OF SALES**  
**AUSTRALIA, 1967-68 TO 1971-72**  
(\$ million)

<i>Year of sale</i>	<i>Net sales on which sales tax was payable</i>	<i>Sales of exempt goods by registered persons</i>	<i>Total sales of taxable and exempt goods</i>	<i>Sales tax payable</i>
1967-68 . .	3,095	8,394	11,489	424
1968-69 . .	3,367	8,933	12,300	498
1969-70 . .	3,810	9,759	13,569	577
1970-71 . .	4,097	10,141	14,238	637
1971-72 . .	4,327	10,700	15,028	679

In the foregoing tables, sales include goods transferred to stock for sale by retail, goods imported by persons other than registered taxpayers, and goods used in the business of the taxpayer. Exempt sales relate to goods exempted from sales tax under the *Sales Tax (Exemptions and Classifications) Act* 1935-1970. The figures shown do not represent the total sales of all commodities, as vendors trading only in exempt goods are not required to be registered, and consequently the volume of their sales is not included in the statistics above. In addition, non-taxable sales (i.e. goods sold by one registered taxpayer to another registered taxpayer) are excluded.

#### Primary production taxes and charges

The following section shows current rates of charges, and receipts from, primary production and other charges during the years 1967-68 to 1971-72. Further information relating to primary production charges is given in Chapter 22, Rural Industry.

*Wheat export charge and wheat tax.* For details see Chapter 22, Rural Industry.

*Wool tax.* The rate of wool tax applicable to transactions in wool in the period 1 August 1970 to 30 June 1973 was 1 per cent. On 3 April 1973 the Government announced its intention to increase the rate for the 1973-74 financial year to 2.4 per cent.

*Miscellaneous export charges.* These consist of charges levied on exports of apples and pears (*Apple and Pear Export Charges Act* 1928-1968), canned fruits (*Canned Fruits Export Charges Act* 1926-1966), dried fruits (*Dried Fruits Export Charges Act* 1924-1970), and eggs (*Eggs Export Charges Act* 1947-1965).

*Tobacco charge.* The rates of tobacco charge currently in force are as follows:

- (a) in respect of leaf grown in Australia and sold to a manufacturer:
  - (i) 1.1 cents per kilogram of leaf, payable by the grower or other persons who own the leaf immediately before sale, and
  - (ii) 2.2 cents per kilogram of leaf, payable by the manufacturer;
- (b) in respect of leaf grown and used by grower-manufacturers:
  - (i) where the manufacturer grows nine-tenths of the Australian tobacco leaf used by him—1.1 cents per kilogram of leaf,
  - (ii) in other cases—2.2 cents per kilogram of leaf.

(See also Chapter 22, Rural Industry.)

*Butter fat levy.* The *Butter Fat Levy Act* 1965-66 provides for a maximum rate of \$0.48 per hundredweight of butterfat content of specified dairy produce and for the apportionment of the proceeds between overseas marketing (50 per cent) and local promotion (50 per cent). (See also Chapter 22, Rural Industry.)

*Dairy Research Levy.* The *Dairying Research Levy Act* 1972 came into operation on 1 July 1972. It imposes a levy on all whole milk produced in Australia and is payable either on a butterfat or gallonage basis, according to the normal method of payment to producer by the purchaser. The present operative rates of levy are 10 cents per hundredweight butterfat or 0.033 cents per gallon milk.

*Canning-fruit charge.* The present rate of canning-fruit charge is \$1.00 per ton of fruit. This rate has operated since 10 December 1970.

*Honey levy.* The current rate of levy on honey sold for domestic consumption in Australia is 0.5 cents per pound.

*Livestock slaughter levy.* The present operative rate of levy for cattle is 46 cents per head of which 25 cents is for beef research, 1 cent for research into the meat processing industry and 20 cents to finance the operations of the Australian Meat Board. For sheep and lambs the levy is 3.85 cent per head and the components are 1.75 cents for sheep meat research, 0.1 cents for research into the meat processing industry and 2.00 cents for the Australian Meat Board.

*Poultry industry levy.* The rates of levy for each hen kept for commercial purposes (the first twenty hens being exempt) were 4.0 cents per fortnight from 1 July 1971 to 8 June 1972, nil per fortnight from 9 June 1972 to 30 June 1972 and 4.0 cents per fortnight from 1 July 1972.

*Meat chicken levy.* The rate of levy is 10 cents per hundred meat chickens hatched, payable by any hatchery with 20,000 chickens or more.

*Pig slaughter levy.* The present operative rate of levy is 5 cents for each pig slaughtered for human consumption.

*Wine grapes charges.* The *Wine Grapes Charges Act* 1929–1969 imposes a levy, which is payable by the owner of a winery or distillery, on all grapes delivered to that winery for use in the manufacture of wine. No charge is payable unless 10 tons or more of grapes have been used in the manufacture of wine during a season. The operative rate of charge as from 25 January 1973 is \$2.40 per tonne of fresh grapes and \$7.20 in respect of dried grapes.

*Dried wine fruits levy.* The *Dried Vines Fruits Levy Act* 1971 imposes a levy on dried vine fruits where the average return for a season exceeds by more than \$10 the amount per ton that constitutes the base price for that season, with a maximum of \$20 per ton.

*Apple and pear stabilisation export duty.* The *Apple and Pear Stabilisation Export Duty Act* 1971 imposes an export duty on the exportation on consignment of fruit of a season where the average export return for a season exceeds the support price for that season. The maximum rate of export duty is 80 cents per reputed bushel.

*Dried fruits levy.* The *Dried Fruits Levy Act* 1971 imposes a levy on dried fruits of a season received for packing. The rate of levy is in the case of dried vine fruits 50 cents per ton and in the case of dried tree fruits \$2.50 per ton.

**Pay-roll tax**

Commonwealth pay-roll tax came into operation on 2 May 1941 and provided for the imposition of a tax on wages paid or payable in respect of any period of time occurring after 30 June 1941. The tax was payable by employers on all wages and salaries paid or payable in excess of a general exemption. The rate of tax, 2.5 per cent, was unchanged since its inception but the general exemption was increased over the years from \$173.33 to \$1,733.33 per month (\$2,080 per annum to \$20,800 per annum).

From 1 September 1971, in accordance with an agreement between the Commonwealth and the States following the June 1971 Premiers' Conference, the Commonwealth vacated the pay-roll tax field in favour of the States. The Commonwealth continued, however, to impose pay-roll tax in the two internal Commonwealth Territories, i.e. the Australian Capital Territory and the Northern Territory. The laws relating to pay-roll tax in the Territories are the *Pay-roll Tax (Territories) Assessment Act 1971* and the *Pay-roll Tax (Territories) Act 1971*.

The rate of tax payable in the Territories is 2.5 per cent with a statutory exemption of wages up to \$1,733.33 per month (\$20,800 per annum) or a proportion of that amount in the case of an employer who is an employer also in a State.

On vacating the pay-roll tax field in favour of the States the Commonwealth introduced an export incentive grant scheme to provide grants in respect of the 1971-72 and 1972-73 financial years equal to the rebates which would have been payable for those years if the pay-roll tax rebate scheme which had operated from the 1960-61 financial year had continued in operation until it was due to expire on 30 June 1973.

Gross collections of pay-roll tax in 1971-72 amounted to \$99,070,028. Refunds of pay-roll tax during 1971-72 under the payroll tax rebate scheme amounted to \$58,674,224 (\$50,674,224 under the export incentive grant scheme). For details of the pay-roll tax rebate scheme, see page 553 of the Official Year Book No. 57.

**Other Commonwealth taxation**

*Stevedoring Industry Charge.* The rates in operation since 10 February 1972 have been as follows:

Class of Waterside Worker			Rate \$
A	..	..	1.00 per man-hour
B	..	..	1.20 per man-hour
C	..	..	0.82 per man-hour

Class A waterside workers are regular waterside workers on weekly hire in permanent and non-permanent continuous ports. Class B are regular casual workers in non-permanent continuous ports and Class C are regular casual workers in non-continuous and seasonal ports and irregular workers in all ports.

*Broadcasting listeners and television viewers' licences.* Information relating to the various classes of licence, and the fees currently applicable to each, is given in Chapter 12, Transport, Communication and Travel, page 390.

**Taxes levied in the Territories**

*Northern Territory.* Taxes levied by the Commonwealth in the Northern Territory in the years 1967-68 to 1971-72 were as follows.

NORTHERN TERRITORY: TAXATION BY TYPE OF TAX, 1967-68 TO 1971-72  
(\$'000)

Charges on conveyances of interests in land(a) . . . . .	298	383	..	..	..
Other taxes, fees, fines, etc. . . . .	32	25	25	22	12
<b>Total taxation . . . . .</b>	<b>2,045</b>	<b>2,290</b>	<b>4,079</b>	<b>5,408</b>	<b>8,725</b>

(a) These charges have been levied in the form of stamp duty from 1969-70 onwards.

Rates on land and stamp duties (*see also* page 578) are the principal taxes levied in the Australian Capital Territory.

#### Gross operating surplus of public enterprises

The *gross operating surplus* of public *trading* enterprises is the excess over working expenses of total revenue from charges before providing for capital consumption and other costs of capital (i.e. interest, debt redemption). *Financial* enterprises do not charge directly, at least not in full, for the services they render; that expenditure is largely financed by net receipts of interest and other transfer income. By convention, the output of these enterprises is valued at cost, so that no operating surplus is recorded in their production accounts. The profits of these enterprises are attributable to their property income. *Income* (including depreciation) of public financial enterprises is therefore arrived at after deducting interest paid and working expenses (i.e. net current expenditure on goods and services) from total receipts of interest and non-dwelling rent.

In the following table the revenue, working expenses and gross operating surplus of public trading enterprises are shown; public financial enterprises are reflected simply on the basis of their income (including depreciation). Further information relating to the more important of these enterprises may be found in the chapters dealing with banking, housing, railways, electric power generation, etc.

## STATE AUTHORITIES

The State authorities dealt with in this section include the central government of each State, statutory bodies created by or under State legislation to carry out activities on behalf of the central government, and incorporated organisations in which individual State governments have a controlling interest.

The transactions of many of the State authorities are itemised in State Consolidated Revenue Funds or in Trust Funds, so that a satisfactory coverage of their transactions can be obtained from a detailed analysis and reclassification of the published accounts whose receipts and payments are summarised in the statement of Treasury balances for each State. The remaining statutory bodies and other publicly owned or controlled organisations maintain accounts entirely, or largely separate from the public accounts although there may be transactions between them and State governments (such as advances and capital contributions, interest and dividends, and votes for running expenses and capital works) which would affect the public accounts. The accounting reports of this group of organisations have to be collected and analysed in order to present a complete statement of the transactions of State authorities—or at least methods of analysis need to be adopted which adequately reflect their transactions so that they are, in principle, covered by the statistics. In the figures which follow in this section all expenditure by State central government authorities on certain institutions, whether direct (e.g. new building charged to Loan Fund) or indirectly by way of current or capital grants to the bodies administering them, has been treated as final expenditure on goods and services by State authorities; fees and gifts from persons or private businesses to these institutions are not included, and neither is the expenditure of the institutions from their own resources. Universities and hospitals are particular examples of organisations for which this practice has been adopted.

Many of these State authorities have been granted autonomy by State legislatures to the extent that they are largely financially independent. Some of these are funded from earmarked tax revenues and are vested with independent borrowing powers. A considerable number of others belong to the category of public enterprises, since they are able to charge for their services so as to cover their costs of operation. These bodies have usually been created to control a specific activity or provide a specific service within a State. It is often the case that in other States similar activities are carried out, or services are provided, by central government or local authorities. Details of the activities of autonomous or semi-autonomous State authorities engaged in construction and maintenance of roads and bridges, provision of water supply and sewerage services, and harbour facilities, are given in the last part of this chapter. Information on the activities of other State authorities engaged in such fields as transport, electricity and gas, housing and banking may be found in chapters relevant to those subjects.

Details of the transactions of State authorities are given in the tables which follow. These figures have been prepared on a national accounting basis, and arranged in a form of presentation which is compatible with the figures given earlier for Commonwealth authorities. The figures are generally consistent with those given for State and local authorities in *Australian National Accounts*, 1971–72. Reference should be made to the introduction of *Public Authority Finance*, 1969–70, for definitions and descriptions of items appearing in these tables, and also for further details of the organisations covered by the figures. However because of the preliminary nature of the 1971–72 information at the time of compilation of the statistics State dissections have been shown only for 1970–71.

Additional information relating to the activities of the State authorities may also be found in the Year Books of the individual States.

## Receipts and outlay

The receipts and outlay of State authorities for the five year period ended 1971-72 are given in the following table.

STATE AUTHORITIES(a): RECEIPTS AND OUTLAY, 1967-68 TO 1971-72

(a) Excluding financial enterprises.

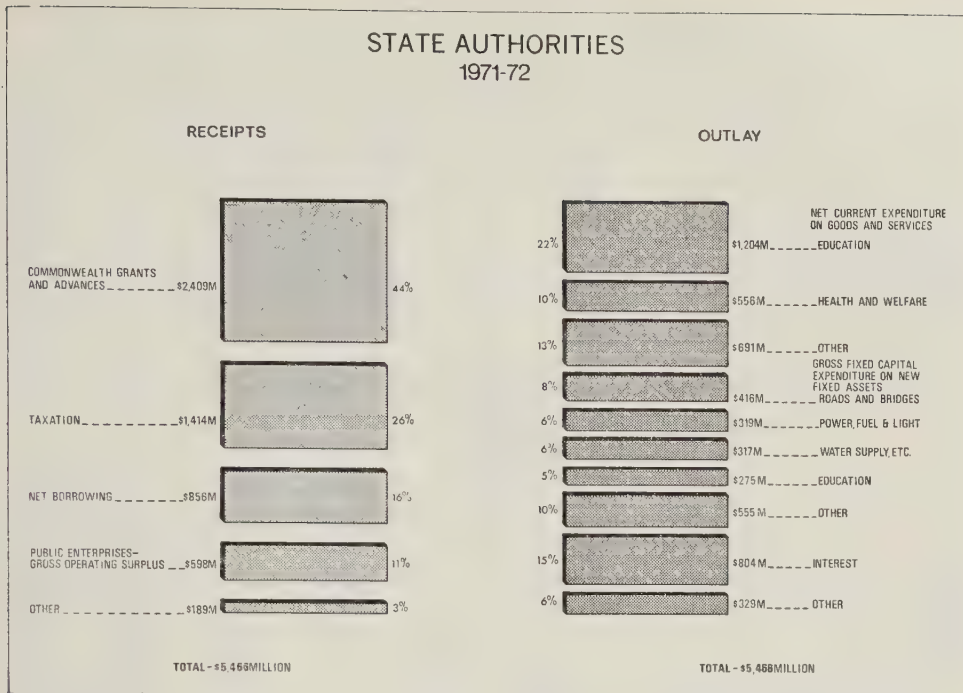

PLATE 35

**Main components of outlay**

The main component of the outlay of State authorities is expenditure on goods and services. As in the case of Commonwealth authorities, this expenditure (as shown here) consists of purchases of goods and services for current consumption, less any charges made by the authorities, together with expenditure on acquisition of fixed assets and changes in stocks, and may be regarded as a measure of demand for goods and services. The following tables show functional dissections of net current expenditure on goods and services and expenditure on new fixed assets as an indication of the range of programs in which the State authorities are involved.

**Main components of receipts**

The major source of funds available to State authorities is in the form of financial assistance by way of grants and advances from the Commonwealth. Taxation is also an important source of revenue, and central government borrowing by way of Commonwealth securities issued on behalf of the States as well as borrowing by statutory bodies accounted for a significant proportion of the total funds available, in marked contrast to the relatively minor role played by borrowing in financing the activities of Commonwealth authorities.

Details of Commonwealth financial assistance to the States have already been given in the section dealing with Commonwealth authorities, and government borrowing activities are dealt with later in this chapter.

The following tables provide details of the taxes collected by State authorities classified by type of tax. Further information relating to State taxes may be found in *Public Authority Finance: Taxation*, 1971-72.

## LOCAL AUTHORITIES

In each State of the Commonwealth there exists a system of local government whose powers and responsibilities are in general similar, and cover such matters as the construction and maintenance of roads, streets and bridges, water, sewerage and drainage systems, and health and sanitary services, the supervision of building, and the administration of regulations relating to items such as weights and measures, slaughtering, the registration of dogs, etc. In addition to these obligatory functions, there are also many which may be performed by a local authority either with or without the consent of the ratepayers or the Governor-in-Council. These include transport facilities, electricity, gas, and other business undertakings, hospitals, charitable institutions, recreation grounds, parks, baths, libraries, museums, etc.

The system is based on the principle of a grant of specific powers by the State legislatures to the local authorities, their autonomy, however, being more or less limited by the provision for general supervision by a department of the central government or by the Governor-in-Council. Otherwise, within the scope of the Acts under which they are constituted or which they have to administer, they are responsible only to the ratepayers. While the broad pattern of local government throughout the States of Australia is similar, the range of activities, election of officers, methods of valuation and rating powers, etc. vary considerably from State to State, and even within States.

The areas over which local government bodies, numbering in excess of 900, exercise general control, are known in New South Wales as cities, municipalities and shires; in Victoria as cities, towns, boroughs and shires; in Queensland as cities, towns and shires; in South Australia as cities, corporate towns and district council areas; in Western Australia as cities, towns and shires; and in Tasmania as cities and municipalities. In New South Wales some local authorities in an area have combined to provide services such as electricity, water, sewerage and drainage—e.g. the county councils. Within shires there are also some municipal units known as urban areas. Apart from the more thinly populated parts of New South Wales and South Australia, and the Commonwealth Territories (except for the City of Darwin and Alice Springs), practically the whole of Australia comes within local government jurisdiction. For further details *see* State Year Books.

### **Area, population, dwellings, and value of rateable property**

The area, population, dwellings, and the value of rateable property in the incorporated areas of each State are shown in the following table. The valuations relate to rateable property only and exclude government and other non-rateable property, whose value in the aggregate is considerable. In some cases councils rate on annual value, or unimproved capital value, or improved capital value, or partly on each of these bases of valuation. The amounts stated are the totals for the areas rated according to each basis of valuation. Particulars of dwellings are in accordance with the definition used in the 1966 census, and are compiled from information collected on the census schedules. For the purpose of the census a dwelling was defined as any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building. The term has, therefore, a very wide reference and includes, in addition to houses and flats, a great variety of dwellings ranging from a single-roomed shack to a multi-roomed hotel or institution. Unoccupied dwellings include vacant dwellings available for sale and renting, 'week-end' and holiday dwellings, and other dwellings temporarily unoccupied on the night of the Census. Dwellings being built are not included.

In the following table particulars of number, area, and value of rateable property refer to estimates made, where practicable, for the capital city statistical division and outside this division. Wherever the statistical boundary cuts across a local government area the estimates have involved either the inclusion or exclusion of the whole of the local government authority concerned in, or from, the capital city statistical division. Particulars of population refer to estimates made for capital city statistical division and outside this division in accordance with the definition of boundaries used in the 1966 census and exclude migratory population and population in unincorporated areas.

(a) Based on year ended 31 December 1971. (b) Excludes Lord Howe Island, unincorporated areas and migratory population. (c) As at 30 June 1972. (d) Estimated on basis of Census 30 June 1971. (e) Based on year ended 30 September 1971. (f) Excludes Yallourn Works Area, under the jurisdiction of the State Electricity Commission, and other unincorporated areas. (g) Year ended 30 June 1971. Total population less migratory and unincorporated. (h) Year ended 30 June 1970. (i) Includes parts only of four L.G.A.s.

### Receipts and outlay

The following tables show details of the receipts and outlay of all local authorities for the years 1967-68 to 1971-72, and of local authorities in each of the six States in 1970-71. The figures up to 1967-68 are based upon detailed analyses of the accounting reports of local authorities; however, as complete information was not available at the time of their preparation, the figures for 1970-71 have been estimated, and should therefore be regarded as approximate only. Figures shown for 1971-72 are based on very limited data, but may be taken as rough indicators of orders of magnitude.

## ALL PUBLIC AUTHORITIES

In the following tables the transactions of the Commonwealth, State and Local authorities have been brought together and consolidated to provide details of the receipts and outlay of the public authority sector as a whole.

## Summary of receipts and outlay

The receipts and outlay of all public authorities for the five year period ended 1971-72 are set out in the following table.

## ALL PUBLIC AUTHORITIES(a): RECEIPTS AND OUTLAY, 1967-68 TO 1971-72

## PUBLIC SECTOR BORROWING

Figures given in this section do not purport to show either 'public debt' or 'net public debt', but are designed to provide details of securities issued on behalf of the Commonwealth and the States, together with details of securities issued and other forms of debt outstanding in respect of local authorities and State authorities with independent borrowing powers.

This information cannot be aggregated, without adjustment, to provide a measure of the 'debt' of public authorities for a number of reasons. There are forms of debt not evidenced by the issue of securities, such as Commonwealth advances to the States for specific capital purposes—of which the advances made under the Commonwealth-State Housing Agreements would be the most important example. Governments themselves maintain significant holdings of their own securities: for example, the Commonwealth Government, in the National Debt Sinking Fund, the Loan Consolidation and Investment Reserve, and in other Trust Funds, holds large investments in securities issued either directly by itself or on behalf of the States. Some of the securities issued on behalf of the States and held by the Commonwealth represent the proceeds of overseas loans, securities for which were issued

directly by the Commonwealth—the Australian currency counterpart proceeds of the loans being invested in special loans to finance State works programs. A number of State public corporations and local authorities also maintain significant investments in government securities (including their own securities). Aggregation of the figures for securities on issue which follow would clearly involve a substantial degree of duplication; the sum of securities on issue therefore cannot be regarded as representing 'net public debt'.

### Commonwealth and States: Loan transactions and Government securities on issue

Under the 1927 Financial Agreement between the Commonwealth and the States, the Commonwealth Government accepted responsibility for the securities of State governments then on issue, and was empowered to arrange for all future borrowings on behalf of the Commonwealth and the States and to issue Commonwealth securities for all money borrowed. The Commonwealth is reimbursed by the States for interest, exchange, etc., paid on their behalf, and the securities are redeemed from the National Debt Sinking Fund to which both the Commonwealth and State Governments make contributions.

In the tables which follow, details are given of transactions in Commonwealth securities issued on account of the Commonwealth and the States, together with details of securities on issue, annual interest liability and average rate of interest liability. Amounts relating to overseas loans are shown in the currencies in which the loans are repayable, and in Australian currency equivalent calculated on the basis of the International Monetary Fund par rates of exchange (and the calculated equivalent for Swiss francs) ruling at 30 June in each year shown. All amounts shown are at face value.

For further information relating to securities issued by the governments of the Commonwealth and the States reference should be made to the Commonwealth Budget paper *Government Securities on Issue*.

#### Net movement in securities on issue

Summary details of the net movement in securities issued for Commonwealth purposes and on account of the States during the period 1967–68 to 1971–72, are given in the following group of tables. Also provided is a table (page 604) which sets out the balance of securities on issue at 30 June 1971 and 1972, and the composition of the change in these balances.

## National Debt Sinking Fund

### Securities on issue on behalf of the Commonwealth

The National Debt Sinking Fund was established by the *National Debt Sinking Fund Act 1923–1959* and came into operation on 11 August 1923. Particulars of the creation and operation of sinking funds by that Act are included in issues of the Year Book prior to No. 23. The *National Debt Sinking Fund Act 1966* repealed all previous legislation on sinking funds relating to securities on issue on behalf of the Commonwealth. Under the Act of 1966 the period of redemption is 25 years from 1 July 1966 for debt outstanding at 30 June 1966 and 25 years for net debt created in subsequent years.

Broadly, the amounts payable to the National Debt Sinking Fund each year are made up of contributions from the Consolidated Revenue Fund of the Commonwealth as follows:

- (a) an amount of \$30.94 million each year for a period of 25 years;
- (b) an amount equal to 4 per cent of the amount of net debt created (if any) in any year for a period of 25 years.

In addition, an amount equal to specified receipts by the Commonwealth in repayment of loans or advances made out of moneys in the Loan Fund will be paid to the Sinking Fund.

The amounts payable to the Fund in any year from Consolidated Revenue Fund are to be reduced by the following:

(a) the net income from investments in any year; and

(b) an amount equal to 4 per cent of the amount of the net reduction of debt in any year.

Particulars of receipts and expenditure of the Commonwealth Account for the years 1967-68 to 1971-72 are as follows.

**Securities on issue on behalf of States**

A sinking fund for the redemption of the securities on issue on behalf of States was established under the Financial Agreement. Particulars of the transactions of the National Debt Sinking Fund (States' Account) for each State during the year 1971-72 and for all States during the years 1967-68 to 1971-72 are shown in the following tables.

### State and Local Authorities' Indebtedness

The statistics of indebtedness of State and local authorities set out in the two following tables have been compiled from returns supplied by all local authorities (including New South Wales County Councils), and by autonomous and semi-autonomous State authorities which have independent borrowing powers, i.e. the power to borrow other than by having Commonwealth securities issued on their behalf—and which have in fact exercised these powers in borrowing from the public under the provisions of the Loan Council's 'Gentleman's Agreement.'

The State authorities covered by these statistics include the authorities responsible for providing the following services.

*New South Wales.* Water Supply, Sewerage and Drainage, Electricity and Gas Supply, Fire Brigades, Banking, Housing, Harbours, Grain Elevators, Roads and Bridges, Marketing, Industry Assistance, and Miscellaneous . . . . .

*Victoria.* Water Supply and Sewerage, Irrigation and Drainage, Harbours, Transport, Electricity and Gas Supply, Roads and Bridges, Fire Brigades, Marketing (Buying and Selling), Industry Assistance, Grain Elevators, and Housing.

*Queensland.* Water Supply and Sewerage, Irrigation and Drainage, Harbours, Transport, Electricity Supply, Fire Brigades, University, Hospitals and Ambulances, Marketing (Buying and Selling and Agency), and Industry Assistance.

*South Australia.* Irrigation and Drainage, Transport, Electricity Supply, Fire Brigades, Hospitals and Ambulances, Marketing (Agency), Industry Assistance, Banking, Housing, University and Miscellaneous.

*Western Australia.* Water Supply and Sewerage, Harbours, Transport, Electricity Supply, Fire Brigades, Hospitals, Marketing (Agency), Housing, University, and Miscellaneous.

*Tasmania.* Harbours, Electricity Supply, Fire Brigades, Transport, Housing, Industry Assistance and Water Supply.

In the tables which follow, debt includes all liabilities for which arrangements have been made for repayment over a period of one year or more, and net overdrafts. Interest capitalised and amounts due for the capital cost of assets or for services rendered which are to be repaid over a period of one year or more are included. Current liabilities, such as interest accrued (but not capitalised), trade creditors, amounts held in trust, and other debts which are to be repaid in less than one year are not included. Net overdraft is the gross overdraft of all funds less all bank credit balances (including fixed deposits) which do not form part of a sinking fund to repay a loan. New loans raised during the year include new loan liabilities incurred during the year, loans raised from the public to repay indebtedness to the Government, and interest capitalised. Loans raised and redeemed within the year, increases in overdrafts, and loans raised for conversion or redemption of existing debt are excluded. Funds provided for redemption include instalments of principal repaid and amounts credited to sinking funds established for the purpose of repaying the debt on maturity. Amounts provided for redemption from loans raised for that purpose are excluded.

### Aggregate debt of State and local authorities

The following table brings together figures of Commonwealth securities on issue on account of the States, debt outstanding of State authorities which have borrowed directly, and debt outstanding of local authorities, to provide an indication of the level of indebtedness of the public authorities in each State. It should be noted, however, that for the kinds of reasons outlined on page 601, this aggregation of figures for securities on issue and debt outstanding cannot be taken as a measure of the 'net public debt' of the State and local authorities. In order to measure this latter magnitude it would be necessary to identify and deduct the substantial holdings of Commonwealth, State and local securities which represent the investment by these authorities of reserve funds and trust and other funds which they administer. In addition, it would be necessary to include the indebtedness of the State authorities to the Commonwealth in respect of advances made for specific capital purposes (such as those made under the Commonwealth-State Housing Agreements). For some purposes too it might be necessary to identify and deduct any loans outstanding from governments to other sectors.

## ROADS AND BRIDGES: WATER SUPPLY AND SEWERAGE: HARBOURS

As indicated elsewhere in this chapter, further details of the activities of public authorities engaged in particular fields of activity such as defence, transport and communication, health and welfare, education, electricity supply, banking, etc., may be found in other chapters of this Year Book which deal specifically with those subjects. However, it has been convenient for the time being to include in this chapter an account of the activities of authorities engaged in the fields of construction and maintenance of roads and bridges, provision of water supply and sewerage services and provision of harbour facilities. Particular attention is given to the activities of State authorities engaged in these fields.

## Roads and Bridges

Primary responsibility for the construction and maintenance of roads and bridges rests with State and local authorities. In each State there exists a central road authority or a government department which undertakes construction, reconstruction and maintenance of declared 'main' and 'developmental' roads, and which administers the distribution of funds to local authorities and supervises and co-ordinates road construction throughout the State. Provision of roads and bridges has always

been one of the principal functions of local authorities, and these authorities still account for a significant proportion of construction and maintenance activity, as is shown by figures given earlier in this chapter. However the relative importance of the contribution of local authorities has tended to decline in recent years, reflecting in part a reassessment of priorities in allocations of road finance. The Commonwealth Government is concerned with construction and maintenance of roads and bridges in the Northern Territory and Australian Capital Territory and roads of access to Commonwealth property in the various States; but the Commonwealth's most significant contribution to government activity in this field is in the provision of specific purpose capital grants to the States under the Commonwealth Aid Roads Acts, which constituted about 30 per cent of the total outlay by State and local authorities on roads and bridges in 1970-71.

In what follows, figures are provided of expenditure on roads and bridges by all public authorities, Commonwealth grants for road purposes, and an account is given of the activities of the principal State authorities concerned with roads and bridges in each State. For details of mileages of roads open to traffic, classified according to class of road and road surface, see Chapter 12, Transport, Communication and Travel.

#### All public authorities

The figures given in the following table provide an approximate measure of the aggregate net expenditure on roads and bridges by Commonwealth, State and local authorities in recent years. Expenditure on roads by those authorities whose primary activity is directed towards functions other than roads, e.g. electricity, forestry, housing, etc., is not included. The figures cover expenditure on the construction, reconstruction and maintenance of roads and bridges, and direct administration. Debt charges are not normally classified by function and are therefore excluded. Because a satisfactory and consistent distinction between new construction and maintenance cannot be made with existing data, all expenditure on roads and bridges is treated as capital expenditure.

#### ALL PUBLIC AUTHORITIES: GROSS FIXED CAPITAL EXPENDITURE, ROADS AND BRIDGES, 1967-68 TO 1971-72 (\$ million)

Year	Common- wealth authorities	State and local authorities					Tas.	All public authorities

1971-72(a)	29	247	198	119	69	74	18	754

(a) Estimated.

#### Commonwealth grants

The following table shows the allocations to the States under the several Commonwealth Aid Roads Acts for road construction, maintenance, repair and other works connected with transport for each of the years 1967-68 to 1971-72. After 1 July 1959, when the *Commonwealth Aid Roads Act* 1959 came into operation, the Commonwealth made separate provision for expenditure on strategic roads and the promotion of road safety practices.

## New South Wales

Main roads administration is organised as a separate department under the control of a Commissioner. The activities of the Department of Main Roads include works on main, secondary, developmental and tourist roads throughout the State, all roads in the unincorporated portion of the Western Division, and certain associated works, principally bridges and vehicular ferries, constructed and maintained from government funds. The Department of Main Roads co-operates with the municipal and shire councils in the work of constructing and maintaining the main roads system.

During 1971-72 changes were made in the method of financing road construction. The New South Wales Government decided that as from 1 January 1972, the full cost of works carried out by the Department of Main Roads was to be met from the Department's own funds. Prior to this date, local councils, in the County of Cumberland were required to meet half the cost of secondary roads construction and a proportion of the cost of tourist roads; and in country districts, councils were required to meet a proportion of the cost of road and bridge construction and maintenance on roads other than State highways. The financial burden was therefore removed from councils in respect of works under the control of the Department of Main Roads. Councils continued to perform work on those roads for which they were responsible in the past.

The funds of the Department of Main Roads are derived principally from motor vehicle taxation, charges on heavy commercial goods vehicles under the Road Maintenance (Contribution) Act, 1958, grants under Commonwealth Aid Roads Acts (*see* page 616), other grants from the State or Commonwealth Governments, and proceeds of a levy on municipal and shire councils in the County of Cumberland in accordance with the Main Roads Act, 1924. The State Government also makes repayable advances for Main Roads Department works, and since 1963 the Commissioner for Main Roads has had the power (with the approval of the Governor on the recommendation of the Treasurer) to borrow moneys. The figures shown below represent the aggregate revenue and expenditure of the following funds: the County of Cumberland Main Roads General and Special Purposes Funds, the Country Main Roads General and Special Purposes Funds, and the Aid Roads Fund.

(a) Excludes repayable advances by the State Government and private loans (\$8,750,000 in 1967-68, \$12,900,000 in 1968-69, \$10,600,000 in 1969-70, \$11,250,000 in 1970-71, and \$8,800,000 in 1971-72), and transfers from Sydney Harbour Bridge Account for Expressway construction (\$4,775,000 in 1967-68, \$900,000 in 1968-69, \$224,000 in 1969-70, \$70,000 in 1970-71, and \$57,000 in 1971-72). Expenditure from these amounts is fully reflected in expenditure. (b) Excludes debt redemption (\$477,000 in 1967-68, \$812,000 in 1968-69, \$984,000 in 1969-70, \$1,365,000 in 1970-71, and \$1,674,000 in 1971-72) and repayment of government advances (\$200,000 in 1967-68 and later years). (c) Mainly purchase of assets not subject to annual depreciation charge. The purchase of other assets is omitted here because the depreciation charge for them is reflected each year in 'Roads and bridges'.

Toll facilities operated by the Department of Main Roads include the Sydney Harbour Bridge and completed sections of the Sydney-Newcastle Expressway.

The Sydney Harbour Bridge was opened for traffic on 19 March 1932, and has a main span of 1,650 feet with clearance for shipping of 170 feet. The deck, 160 feet wide, carries eight road traffic lanes, two railway tracks, one cycleway and one footway. During 1971-72, approximately 50.2 million private road vehicles, 25.4 million rail passengers and 9.6 million bus passengers crossed the bridge. Income from tolls during 1971-72 amounted to \$5,001,000, including road tolls of \$4,707,000, rail passenger tolls \$272,000 and bus passenger tolls \$22,000.

The sections of the Sydney-Newcastle Expressway now open to traffic extend approximately six miles between Berowra and the Hawkesbury River and approximately ten miles north of the river to Calga. The Department is currently constructing a bridge on the Hawkesbury River to link these two sections of the Expressway. Total cost of the project to 30 June 1972 was \$32 million. Toll collections during the year ended 30 June 1972 amounted to \$2,563,562.

### Victoria

With the object of improving the main roads of the State, the Country Roads Board was established by legislation passed in 1912. The principal duties of the Board are to determine which roads should be declared in the various classifications; to supervise the construction, reconstruction and maintenance of these roads; to inquire into the State's resources in road materials and the most effective methods of road construction and maintenance; and to recommend deviations in existing roads or the construction of new roads in order to facilitate communications or to improve the conditions of traffic.

The funds of the Country Roads Board are derived principally from motor registration fees, two-thirds of additional registration fees (charged on initial registration or transfer), a proportion of drivers' licence fees, payments by the Commonwealth Government under the Commonwealth Aid Roads Acts, roads charges under the Commercial Goods Vehicles Act, repayments by municipalities and, since 1965, a share of the addition to registration fees paid to the Roads (Special Projects) Fund and a grant under the Public Works Loan Application Act. In addition, loans have been authorised from time to time under the Country Roads Acts for permanent works on main and developmental roads, State highways, tourists' roads and forest roads, while the State Government has provided, free of repayment, loan moneys for restoration of flood and bush fire damage. Finance for the elimination of level crossings and for improved approaches, signs, lighting and other work to reduce danger at level crossings is derived mainly from the one third of additional registration fees paid into the Level Crossings Fund, maintained by the Board.

The Melbourne and Metropolitan Board of Works bears the responsibility for carrying-out planning scheme proposals relating to metropolitan highways and bridges, and is now carrying out a program of urgent highway works throughout the metropolitan area of Melbourne. The extension of the South-Eastern Freeway from Burnley to Tooronga, the Tullamarine Freeway to serve the new Tullamarine airport and the St. Kilda Road Underpass connecting Alexandra Avenue and Sturt Street have been completed. The Eastern Freeway from Collingwood to Bulleen is now under construction. Widening of High Street, St. Kilda, is in progress. Expenditure on road projects up to 30 June 1972 was \$76.1 million. Of this amount, \$26.1 million was financed from the proceeds of the Board's Metropolitan Improvement Rate, \$45.5 million was contributed by the Treasurer of Victoria from the Roads (Special Projects) Fund and \$4.5 million from the Commonwealth Aid Roads Account during 1971-72.

The Lower Yarra Crossing Authority was incorporated in October 1965 as a company limited by guarantee and given powers under the *Lower Yarra Crossing Authority Act 1965* to construct, operate and maintain a toll crossing over the lower reaches of the River Yarra.

### Queensland

The Department of Main Roads was constituted in February 1951 with the Commissioner of Main Roads as its permanent head. The duties of the Commissioner are to carry out surveys and investigations necessary to determine State highways, main developmental, and secondary roads; and the responsibility for building and maintaining these declared roads is largely that of the Commissioner. Roads of purely local importance are constructed and maintained by local authorities. In many cases construction is financed by the State Government by means of Treasury loans. Other roads may be built by the Public Estate Improvement Branch of the Lands Department in order to open up areas of previously inaccessible or undeveloped country.

The funds of the Department of Main Roads are obtained chiefly from motor vehicle registration and collections, fees, etc., under the Transport Acts, contributions under the Commonwealth Aid Roads Acts, and loans, grants and advances from the State Government. The total receipts and payments during each of the years 1967-68 to 1971-72 are shown in the following table.

**DEPARTMENT OF MAIN ROADS, QUEENSLAND: RECEIPTS AND PAYMENTS**  
**1967-68 TO 1971-72**  
(\$'000)

	1967-68	1968-69	1969-70	1970-71	1971-72

(a) Includes grants to local authorities for road purposes.

### South Australia

The Highways Department is administered by the Commissioner of Highways, who is empowered, subject to the approval of the Minister of Roads and Transport, to undertake the construction, maintenance and protection of the principal roads of the State, allocate grants to councils for road-works and supervise the expenditure of these grants, and assist Councils to purchase road-making plant and to defray the cost of road-works. In addition, the Commissioner advises Councils on technical questions concerning the construction, maintenance or repair of roads. Funds of the Department are derived mainly from the Highways Fund, into which are paid the proceeds from motor vehicle registration and drivers' licences (less cost of collection) appropriations from loan funds, repayments of advances made to Councils, and contributions by the Municipal Tramways Trust, and from contributions under the Commonwealth Aid Roads Acts.

The following table shows particulars of receipts and payments, during the years 1967-68 to 1971-72, of funds controlled by the Highways Department.

**HIGHWAYS DEPARTMENT, SOUTH AUSTRALIA**  
**RECEIPTS AND PAYMENTS, 1967-68 TO 1971-72**  
 (\$'000)

(a) Includes reimbursement works for Commonwealth Government. (b) Includes administration expenses.  
 (c) Represents gross repayments less recoveries by charges to works on account of depreciation and materials used.

### Western Australia

Work connected with road construction and maintenance and associated projects in Western Australia is undertaken by the State Government, through the Main Roads Department, and by local government authorities throughout the State. The Department operates under the *Main Roads Act*, 1930-1972, and is administered by a Commissioner of Main Roads responsible to the Minister for Works. The Act makes provision for the construction and maintenance of public roads in the categories of main roads, controlled-access roads and developmental roads. An additional category, that of important secondary roads, is used by the Department in determining its works program. Within its own district each local government authority is responsible for the provision and upkeep of roads other than those provided by the Main Roads Department. In addition, the local authority is required by the Main Roads Act to maintain any developmental road situated in its district.

The funds of the Main Roads Department are derived principally from allocations made under the *Commonwealth Aid Roads Act* 1969 under which Western Australia has been allotted grants totalling \$200,400,000 for the five-year period commencing 1 July 1969. In the seven-year period to 30 June 1974 grants totalling a maximum of \$9,500,000 are to be received from the Commonwealth for the improvement of roads used for the transport of beef cattle in the Kimberley District. Other sources of income include a portion of vehicle licence fees collected by local government authorities and the Commissioner of Police, overload permit fees and an allocation from drivers' licence fees. Further moneys for expenditure on road maintenance are available under the *Road Maintenance (Contribution) Act*, 1965-1972 administered by the Commissioner of Transport. Since 1 July 1969 the Main Roads Department, through changes to legislation, has administered funds not previously included in receipt and payments of the Department. Receipts and payments for the years 1967-68 to 1971-72 are shown in the following table.

**MAIN ROADS DEPARTMENT, WESTERN AUSTRALIA: RECEIPTS AND  
PAYMENTS, 1967-68 TO 1971-72**

(\$'000)

<b>Total . . . . .</b>	<b>36,393</b>	<b>36,442</b>	<b>49,764</b>	<b>56,616</b>	<b>66,693</b>

(a) Includes administration and expenditure on hire and maintenance of road construction plant, etc., and on purchase of materials. (b) Consists of payments to local authorities for work carried out on behalf of the Main Roads Department. From 1968-69 these payments have been included in 'Construction and reconstruction of roads and bridges' and 'Maintenance of roads and bridges'.

### Tasmania

Under the *Roads and Jetties Act 1935*, the control of the construction and maintenance of roads and certain road making plant was vested in the Minister for Lands and Works. Works authorised by the Minister in respect of roads classified as State highways, main roads, secondary roads and tourist and developmental roads are constructed by the Department of Public Works and financed from the State Highways Trust Fund, into which are paid Commonwealth Aid Roads grants, motor vehicle taxes and public vehicle fees. Loan funds are also authorised by Parliament for road purposes. Municipal councils contribute towards the cost of maintaining main and secondary roads in the classified system. The maintenance of roads not included in the classified system is the responsibility of municipal councils, but they are assisted with grants made available under the Commonwealth Aid Roads Act for expenditure on Rural Roads.

The table following shows particulars of receipts and payments for the years 1967-68 to 1971-72 (municipal council receipts from rates and loans for road purposes are excluded).

### Water supply, sewerage and drainage

The information in this section relates primarily to the metropolitan areas and provincial cities and towns. For information on water supply and irrigation in rural areas *see* Chapter 23, Water Conservation and Irrigation.

#### New South Wales

The two largest domestic water supply and sewerage systems are controlled by statutory boards each consisting of a president and a vice-president appointed by the State Government, and five members elected by local councils. These are (a) the Metropolitan Water, Sewerage and Drainage Board, which administers the systems in the County of Cumberland, i.e. in Sydney and in the surrounding districts, and, in addition, has jurisdiction over territory extending along the South Coast beyond Wollongong to Lake Illawarra, Shellharbour and Kiama, and (b) the Hunter District Water Board serving the Newcastle-Maitland-Cessnock areas. At Broken Hill and Cobar similar boards include representatives of the mining companies. Other systems, apart from irrigation projects and water storage systems administered by the State Government, are controlled by county, municipal or shire councils.

*Metropolitan and Hunter District water supply.* The storage reservoirs of the *metropolitan water supply system* with a combined available capacity of 577,112 million gallons, drain catchment areas of 3,890 square miles (including Warragamba, 3,480 square miles, Upper Nepean, 347 square miles, and Woronora, 29 square miles). The development of a water supply system on the Warragamba River was completed with the official opening of the Warragamba Dam in October 1960. This dam, constructed in concrete, has a storage capacity of 452,505 million gallons. Its safe net draught is estimated to be 274 million gallons a day. At 30 June 1972 there were 190 service reservoirs in use with a combined capacity of 839 million gallons. Fluoridation of the metropolitan water supply commenced in April 1968.

The following table shows, for the Metropolitan system, the number of properties, the estimated population supplied, and other details.

**METROPOLITAN WATER SUPPLY(a), NEW SOUTH WALES: SERVICES, 1967-68 TO 1971-72**

Year	Improved properties for which water mains available	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of mains	Number of meters
					Per property	Per head of estimated population		
		'000	mil. gal	mil. gal	gallons	gallons	miles	
1967-68	756,063	2,816	270	98,981	357	96	8,325	532,859
1968-69	775,548	2,885	302	110,347	389	106	8,534	550,017
1969-70	795,918	2,968	285	104,017	358	97	8,805	583,818
1970-71	817,655	3,042	293	106,860	358	97	8,973	608,851
1971-72	839,984	3,040	295	107,838	351	97	9,195	634,211

(a) County of Cumberland, City of Greater Wollongong, Shellharbour and Kiama Municipalities, and parts of Colo and Wollondilly Shires.

The water supply of the *Hunter District system* is drawn principally from three sources; the Chichester Reservoir, with a storage capacity of about 3,742 million gallons and draining a catchment of 76 square miles, the Tomago Sandbeds, which extend northerly along the coast towards Port Stephens, and the Grahamstown Water Supply Scheme which is still being developed. Another source of supply is provided by the Nelson Bay-Anna Bay Scheme. Service reservoirs and tanks distributed throughout the water supply district have a total storage capacity of 137 million gallons.

*Metropolitan and Hunter District sewerage and drainage system.* The metropolitan sewerage and drainage system serving Sydney and suburbs comprises 4 major sewerage systems and 7 minor systems, consisting of 6 outfalls discharging directly into the Pacific Ocean and 5 treatment works. There are also 8 centres outside the metropolitan area of which 5 (Camden, Campbelltown, St Mary's, Richmond and Warragamba township) are served by local treatment works and 3 (Bellambi, Port Kembla and Wollongong) discharge directly into the Pacific Ocean. Stormwater drainage channels under the control of the Metropolitan Water, Sewerage and Drainage Board at 30 June 1972 were 192 miles long.

The following table gives details of sewerage services and stormwater drains of the Metropolitan system.

**METROPOLITAN SEWERAGE AND DRAINAGE(a)  
NEW SOUTH WALES: SERVICES, 1968 TO 1972**

30 June—			Improved properties for which sewerage available	Estimated population served	Length of sewers	Length of stormwater channels
				'000	miles	miles
1968	.	.	574,847	2,135	6,166	184
1969	.	.	602,312	2,235	6,504	186
1970	.	.	637,258	2,374	6,804	190
1971	.	.	659,035	2,477	7,109	191
1972	.	.	696,342	2,531	7,435	192

(a) County of Cumberland, City of Greater Wollongong, Shellharbour and Kiama Municipalities, and parts of Colo and Wollondilly Shires.

The main sewerage system of the *Hunter District* serves the City of Newcastle and discharges into the Pacific Ocean at Burwood Beach. There are also local treatment works at Maitland, Cessnock and some of the outlying districts.

*Metropolitan system finances* The following table shows the debt, revenue and expenditure of the Metropolitan Water, Sewerage and Drainage Board for each of the services of water supply, sewerage and drainage during 1971-72, and for the three services combined for the years 1967-68 to 1971-72.

**METROPOLITAN(a) WATER SUPPLY, SEWERAGE AND DRAINAGE**  
**NEW SOUTH WALES: FINANCES, 1967-68 TO 1971-72**  
 (\$'000)

Year	Capital debt at 30 June	Revenue	Expenditure			Total	Surplus
			Working expenses (b)	Interest and exchange	Debt redem- ption		
1971-72—							
Water . . .	355,031	59,159	34,190	18,188	6,779	59,157	2
Sewerage . . .	345,258	57,385	31,664	18,673	7,041	57,378	7
Drainage . . .	15,689	3,307	2,229	874	198	3,301	6
<b>Total—</b>							
1971-72 . . .	715,978	119,851	68,083	37,736	14,017	119,836	14
1970-71 . . .	654,420	97,694	52,289	33,259	12,135	97,683	11
1969-70 . . .	627,475	88,343	47,112	30,213	11,004	88,328	15
1968-69 . . .	590,869	80,206	41,865	28,216	10,105	80,185	21
1967-68 . . .	550,793	68,917	31,765	26,389	10,754	68,908	9

(a) County of Cumberland, City of Greater Wollongong, Shellharbour and Kiama Municipalities, and parts of Colo and Wollondilly Shires. (b) Includes provision for renewals, long service leave, etc.

*Local government country water supply and sewerage systems.* At 31 December 1970, country water supply services were conducted or under construction by 49 municipalities, 95 shires and 6 county councils, and country sewerage services by 54 municipalities and 75 shires. The capital indebtedness of these schemes was \$140,931,000 at 31 December 1970. Debt of the municipalities amounted to \$59,487,000, shires to \$64,436,000 and county councils to \$17,008,000. Government advances amounting to \$699,000 are included in these figures. Aggregate income and expenditure amounted to \$28,333,000 and \$21,416,000 respectively, in 1970.

*Other country water supply and sewerage systems.* The water supply and sewerage services for Broken Hill are operated by a statutory board, the Broken Hill Water Board. Its capital indebtedness at 31 December 1971 was \$5,133,000. In 1971, income (excluding subsidies, State Government \$246,000 and mining companies \$689,000) amounted to \$808,000 and expenditure (excluding debt redemption \$335,000) amounted to \$1,396,000. The Cobar Water Board was constituted in February 1964. At 31 December 1971 its capital indebtedness was \$2,134,000. The following country water supply systems—South-West Tablelands, Junee, and Fish River—are administered by the Department of Public Works. These supply water in bulk to municipalities and shires, the Electricity Commission of New South Wales, and other large consumers. Only a small quantity is sold direct to private consumers. The capital indebtedness of these systems was \$15,049,000 at 31 December 1971. The Mulwala Water Supply and Sewerage Service was constructed as an urgent war-time work for the Commonwealth, and the Bethungra Water Supply System is administered by the Department of Public Works in conjunction with the Junee supply.

## Victoria

*Melbourne and Metropolitan Board of Works.* The Board consists of a Chairman and fifty-three Commissioners elected to represent the municipalities which lie wholly or partly within the metropolitan area. The principal functions of the Board are: to control and manage the metropolitan water supply system; to provide the metropolitan area with an efficient main and general sewerage system; to deal with main drains and main drainage works; to control and manage the rivers, creeks and watercourses within the metropolitan area; and to carry out the functions of a permanent planning authority.

*Metropolitan water supply.* There are 6 storage reservoirs serving the metropolitan area—Yan Yean, 7,233 million gallons; Maroondah, 6,289 million gallons; O'Shannassy, 930 million gallons; Silvan, 8,853 million gallons; Upper Yarra, 45,400 million gallons; and Greenvale, 6,048 million gallons; total 74,753 million gallons. Service reservoirs number 57, with a total capacity of 409 million gallons. The following table shows particulars of Melbourne metropolitan water supply services for the years 1967-68 to 1971-72.

## MELBOURNE WATER SUPPLY: SERVICES, 1967-68 TO 1971-72

Year	Number of houses supplied	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of aqueducts, etc., mains and reticulation	Number of meters
					Per house	Per head of estimated population		
		'000	mil. gal.	mil. gal	gallons	gallons	miles	
1967-68	642,039	2,170	139.0	50,876	216	64.1	6,791	577,713
1968-69	658,944	2,227	173.4	63,288	263	77.9	7,034	595,560
1969-70	676,111	2,285	183.7	67,063	272	80.4	7,176	612,074
1970-71	698,024	2,359	200.4	73,141	287	84.9	7,337	630,020
1971-72	724,071	2,447	199.2	72,912	275	81.4	7,464	644,904

*Metropolitan sewerage and drainage.* Particulars of sewerage and drainage services for 1967-68 to 1971-72 are shown below.

## MELBOURNE SEWERAGE AND DRAINAGE: SERVICES, 1967-68 TO 1971-72

Year	Number of houses for which sewers are provided	Estimated population for which sewers are provided	Average daily pumping	Total sewage pumped for the year	Average daily pumping		Length of sewers, etc.	Length of main drains
					Per house	Per head of estimated population		
		'000	mil. gal	mil. gal	gallons	gallons	miles	miles
1967-68	509,185	1,685	86.1	31,514	169.1	51.1	4,739	240
1968-69	528,983	1,741	96.7	35,300	182.8	55.5	4,906	250
1969-70	543,870	1,786	109.5	39,972	201.3	61.3	5,073	255
1970-71	559,000	1,827	111.5	40,695	199.5	61.0	5,213	260
1971-72	575,221	1,885	115.8	42,399	201.3	61.4	5,282	265

The metropolitan sewerage system consists of the main system (serving an area of 123,536 acres) and 7 subsidiary systems—the Braeside system (serving an area of 6,849 acres), the Kew system (serving an area of 113 acres), the Maribyrnong system (serving an area of 182 acres), the Lower Plenty system (serving an area of 2,180 acres), the Heatherton system (serving an area of 2,049 acres), the Altona system (serving an area of 369 acres) and the Chelsea system (serving an area of 670 acres). The Board of Works Farm, 26,809 acres in extent and situated about twenty-four miles south west of Melbourne beyond the township Werribee, serves to purify and dispose of approximately ninety-five per cent of the sewerage flow of the metropolis before its discharge into Port Phillip Bay.

*Melbourne and Metropolitan Board of Works' finances.* The following table provides for the year 1971-72 a summary of the financial operations of the water supply, sewerage and drainage services conducted by the Melbourne and Metropolitan Board of Works, and of the combined services for the years 1967-68 to 1971-72. The financial operations of the Board as the Authority responsible for metropolitan highways and bridges are referred to on page 619.

**MELBOURNE AND METROPOLITAN BOARD OF WORKS: FINANCES**  
**1967-68 TO 1971-72**  
 (\$'000)

<i>Service, etc.</i>		<i>Capital cost of works and buildings at 30 June(a)</i>	<i>Revenue</i>	<i>Expenditure</i>				<i>Total</i>	<i>Surplus (+) or deficit (-)</i>

(a) Total loan indebtedness—1971-72, \$569,255.

(b) Statutory and general expenditure not distributed over services.

*State Rivers and Water Supply Commission.* Water supply and conservation throughout Victoria, (except for the area controlled by the Melbourne and Metropolitan Board of Works) is under the jurisdiction of the State Rivers and Water Supply Commission. The events leading to the establishment of the Commission, and its various works are described in the chapter, Water Conservation and Irrigation.

### Queensland

The *Brisbane City Council* operates the water supply and sewerage systems of the City of Brisbane and also supplies, in bulk, the whole of the water used by the City of Ipswich and a portion of that used by the City of Redcliffe and Albert Shire Council. Redcliffe supplements its supply from that of the Pine Rivers Shire Council, while Albert also draws on its own reservoirs. The total number of service reservoirs for Brisbane Water Supply is 30, with a capacity of 110.9 million gallons. The Somerset reservoir is a dual purpose project with a designed total holding capacity of 200,000 million gallons, 67,500 million gallons to be for water storage and 132,500 million gallons for flood mitigation. The following table is a summary of operations of the complete Brisbane City Council system (Brisbane, Ipswich, and portion of Redcliffe and Albert Shires) for the years 1967-68 to 1971-72.

**BRISBANE WATER SUPPLY(a): SERVICES, 1967-68 TO 1971-72**

<i>Year</i>		<i>Services connected</i>	<i>Estimated population supplied</i>	<i>Average daily consumption</i>	<i>Total consumption for the year</i>	<i>Average daily consumption</i>		<i>Length of trunk and reticulation mains</i>
						<i>Per service</i>	<i>Per head of estimated population</i>	
				mil. gal	mil. gal	gallons	gallons	miles
1967-68	.	207,657	759,434	76.7	27,984	369	101.0	2,823
1968-69	.	213,445	772,356	85.4	31,170	400	110.6	2,834
1969-70	.	218,798	799,276	81.9	29,888	374	102.4	2,972
1970-71	.	223,911	807,168	85.5	31,221	382	106.0	3,062
1971-72	.	235,343	828,088	91.8	33,603	390	110.9	3,279

(a) Includes Ipswich and a portion of Redcliffe and Albert Shires.

The sewerage treatment works of the *Brisbane sewerage scheme* is situated at Luggage Point at the entrance to the Brisbane River. The following table is a summary of operations of the Brisbane sewerage scheme for the years 1967-68 to 1971-72.

BRISBANE SEWERAGE: SERVICES, 1967-68 TO 1971-72

Year	Premises connected	Estimated population served	Total sewage pumped for the year	Length of main, branch, reticulation, etc., sewers
			mil. gal	miles
1967-68 . .	109,364	404,647	8,358	1,607
1968-69 . .	122,690	453,953	8,619	1,824
1969-70 . .	143,245	530,007	9,313	2,048

1970-71 . . .	77,802	10,524	1,961	3,064	9,261	+	1,263
1971-72 . . .	77,876	11,171	2,531	2,697	6,979	+	4,192

(a) Total, including other expenditure.

*Other areas.* At 30 June 1971, of the 130 local authorities in addition to the City of Brisbane, 126 had water supply schemes and 75 operated sewerage systems. The receipts (other than loan and loan subsidy) of water undertakings controlled by the cities and towns referred to above amounted to \$13,089,000 in 1970-71. Expenditure amounted to \$12,983,000, including \$5,400,000 for debt charges. In addition, expenditure from loans and loan subsidy amounted to \$10,186,000. Finances of sewerage undertakings are incorporated with cleansing and sanitary services and are not available separately.

### South Australia

The water supply and sewerage systems in this State were constructed mainly, and are maintained by the Engineering and Water Supply Department, under the control of the Minister of Works. Works controlled by the Department are the Adelaide, Barossa, Beetaloo, Bundaleer, Moorook, Tod River, Warren, Yorke Peninsula, and other country water districts systems, the Morgan-Whyalla water supply system, the metropolitan and country sewerage systems, the Metropolitan Flood Waters Scheme, and works on the River Murray constructed under the River Murray Waters Agreement. Several water supply schemes on the Murray River are administered by the Department of Lands in conjunction with irrigation works, and supplies to Woomera and Leigh Creek coalfield are controlled by the operating authorities.

*Adelaide waterworks.* At 30 June 1972 the Adelaide waterworks supplied districts covering 385 square miles of the metropolis and extending to near country areas. The capacity of the principal reservoirs was 41,438 million gallons and there were 3,795 miles of metropolitan mains. The Mannum-Adelaide pipeline conveys water from the River Murray. Water is delivered to a terminal storage near Adelaide and thence to the metropolitan distribution system or alternatively it can be delivered into metropolitan reservoirs on the River Torrens or to reservoirs on the River Onkaparinga by further pumping. The pipeline also supplies various country areas along and extending from its route. A second River Murray pipeline extending from Murray Bridge to the River Onkaparinga is under construction.

**ADELAIDE WATERWORKS: FINANCES, 1967-68 TO 1971-72**  
(\\$'000)

Year	Invested capital at 30 June (a)	Revenue	Expenditure		Total	Surplus(+) or deficit(-)
			Working expenses (b)	Interest		
1967-68	108,936	10,267	6,746	4,730	11,476	- 1,209
1968-69	114,121	10,793	5,552	4,919	10,471	+ 322
1969-70	123,817	12,722	6,236	5,399	11,636	+ 1,086
1970-71	133,509	14,513	6,787	5,887	12,674	+ 1,839
1971-72	143,880	15,772	7,130	6,414	13,544	+ 2,229

(a) After deduction of depreciation. (b) Includes debt redemption.

*Adelaide metropolitan sewerage system.* The Adelaide metropolitan sewerage system, comprising the Adelaide, Glenelg, Port Adelaide, Christies Beach, and Salisbury-Elizabeth areas of 207 square miles in all, includes treatment works at Glenelg, Port Adelaide, Bolivar, and Christies Beach. Financial and other particulars for 1967-68 to 1971-72 are shown hereunder.

**ADELAIDE METROPOLITAN SEWERAGE: SUMMARY, 1967-68 TO 1971-72**

Year	Length of sewers	Number of con- nections	Invested capital at 30 June(a)	Revenue	Expenditure		Total	Surplus
					Working expenses (b)	Interest		
	miles		\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
1967-68	2,125	227,489	74,808	7,156	3,375	2,822	6,197	959
1968-69	2,193	234,818	78,141	7,601	3,463	3,073	6,536	1,065
1969-70	2,276	244,239	84,080	8,644	3,716	3,601	7,317	1,327
1970-71	2,347	254,816	90,169	10,477	4,270	3,910	8,180	2,297
1971-72	2,415	265,755	96,431	11,977	4,909	4,500	9,409	2,568

(a) After deduction of depreciation. (b) Includes debt redemption.

*Country sewerage schemes.* Sewerage schemes are operating at Port Lincoln, Naracoorte, Mount Gambier, Millicent, Lobethal, Gumeracha, Nangwarry, Mount Burr, Myponga, Mannum, Whyalla and Angaston. At Port Lincoln and Mount Gambier the sewers discharge to ocean outfalls, and treatment works are used on the other systems. There are 331 miles of sewers and 19,222 connections in the country systems. Sewerage schemes for Port Pirie, Murray Bridge and Gawler are under construction and operating in part.

*Country water supply.* Water districts systems at 30 June 1972 comprised an area of 15,867,000 acres. Supply came from major reservoirs having a capacity of 20,439 million gallons, from minor reservoirs, from the River Murray, and from underground sources. Apart from local supplies, water from the River Murray is distributed over wide areas through the Mannum-Adelaide, Morgan-Whyalla, Swan Reach-Stockwell and Tailem Bend-Keith pipelines and branches of these pipelines. The principal areas of underground supplies are in the south-east of the State, where water from the Murray Basin can be had at moderate depths or from lakes, and from sand beds on Eyre Peninsula.

In the year 1971-72 supplies made to Mount Gambier, Naracoorte and other towns in the south-east amounted to 1,333 million gallons, and the Unley-Wanilla, Lincoln and Poldas Basins contributed 764 million gallons to the Tod River Water District.

*Morgan-Whyalla water supply scheme.* This scheme, which has 223 miles of main via Port Augusta and 176 miles of main via the Spencer Gulf undersea crossing, was officially opened on 31 March 1944, the capital invested to 30 June 1972 being \$38,000,000. Apart from supplying Whyalla, the mains have been used to allow expansion of reservoir supplies in the northern agricultural area of the State, and to meet new demands caused by industrial growth at Whyalla, Port Pirie and Port Augusta. During 1971-72 water used from the scheme amounted to 4,379 million gallons.

### Western Australia

The principal water supply systems of Western Australia are under the control of two State authorities, the Metropolitan Water Supply, Sewerage and Drainage Board and the Public Works Department. The area which constitutes the territory administered by the Board encompasses approximately 1,600 square miles and extends from Perth southward to Rockingham and Serpentine, northward to Mullaaloo, and eastward to Sawyers Valley and Kalamunda. The Public Works Department controls the Goldfields and Agricultural Water Supply and the Great Southern Towns Water Supply as well as 125 local water supplies (*see also* Chapter 23, Water Conservation and Irrigation). Four independent town schemes are controlled by local Water Boards in country areas, and individual water supplies serve railways, timber mill towns, isolated mines, pastoral properties, stock routes, and agricultural areas, mainly from dams, tanks, wells and bores.

*Metropolitan water supply, sewerage and drainage.* The sources of the metropolitan water supply are Serpentine Reservoir and Serpentine Pipehead Reservoir, Canning Reservoir, Churchman Brook Reservoir, Victoria Reservoir, Wungong Brook Diversion Weir and North Dandalup Pipehead Dam. The largest of these sources are the Serpentine Reservoir and the Canning Reservoir, which have a capacity of 39,000 million gallons and 20,550 million gallons respectively. Water from storages on the Darling Range is conveyed to service reservoirs to serve the City of Perth and the metropolitan area. A limited quantity of water is drawn from Mundaring Weir to serve sections of Greenmount, and to meet the peak demands of summer consumption supplies are supplemented from artesian bores, which can provide a daily maximum of 21 million gallons. The amount of bore water used is rarely more than 10 per cent of the metropolitan consumption and is usually considerably less.

The following table shows particulars of the *metropolitan water supply services* for 1967-68 to 1971-72.

**METROPOLITAN WATER SUPPLY, WESTERN AUSTRALIA: SERVICES  
1967-68 TO 1971-72**

Year	Number of services (a)	Average daily consumption	Total consumption for year	Average daily consumption per service (b)	Length of mains	Number of meters
		mil. gal	mil. gal	gallons	miles	
1967-68 . . .	173,068	68.2	24,958	403	2,923	152,603
1968-69 . . .	185,340	76.7	28,015	429	3,144	161,859
1969-70 . . .	193,359	87.2	31,820	458	3,317	171,346
1970-71 . . .	200,597	89.2	32,573	452	3,505	178,857
1971-72 . . .	210,465	93.4	34,099	455	3,687	187,313

(a) Figures relate to 30 June.

(b) Calculated from averages for the year.

Some particulars of the *metropolitan sewerage and main drainage services* for 1967-68 to 1971-72 are shown in the following table.

**METROPOLITAN SEWERAGE AND MAIN DRAINAGE  
WESTERN AUSTRALIA: SERVICES 1967-68 TO 1971-72**

Year	Services	Length of sewers	Length of main drains
		miles	miles
1967-68 . . . .	72,177	886	118
1968-69 . . . .	74,018	931	126
1969-70 . . . .	76,638	988	141
1970-71 . . . .	81,940	1,136	157
1971-72 . . . .	87,318	1,237	157

*Metropolitan Water Supply, Sewerage and Drainage Board—finances.* The following table shows particulars of the finances of the Western Australian Metropolitan Water Supply, Sewerage and Drainage Board.

**METROPOLITAN WATER SUPPLY, SEWERAGE AND MAIN DRAINAGE

*Country water supplies.* Information relating to country water supplies is included in Chapter 23, Water Conservation and Irrigation.

### Tasmania

*Waterworks.* During the year 1971-72, water was supplied to over 104,000 properties which consumed approximately 15,900 million gallons.

In Tasmania, water supply was once the exclusive responsibility of the city and municipal councils. In recent years, two semi-government authorities have been set up to operate bulk supply schemes for distribution by the local government authorities in the Hobart and Launceston areas, and directly to some industrial consumers. The North Esk Regional Water Supply Scheme is operated by the Rivers and Water Supply Commission as a State concern, supplying bulk water to the municipalities of St Leonards, George Town, Lilydale, and portion of Westbury. This scheme supplies water to

industries situated near the Tamar River. Also vested in the Commission is the West Tamar Water Supply Scheme which serves the Municipality of Beaconsfield, and is operated by the Beaconsfield Council as the agent of the Commission. The over-all control of water supply in the greater Hobart area, comprising the municipalities of Hobart, Clarence, Glenorchy, and Kingborough, is vested in the Metropolitan Water Board, but the municipalities retain primary responsibility for reticulation. The Board has constructed a large pumping station at Bryn Estyn, near New Norfolk, which supplies bulk water from the Derwent River to the metropolitan area and has a pipeline capacity of 20 million gallons a day. In addition, the Board also controls the Southern Regional Water Supply Scheme with a pipeline capacity of 6.9 million gallons a day which supplies water to Hobart's eastern shore and nearby towns.

*Sewerage.* At the end of 1971-72 the number of tenements connected to sewerage services was about 83,000. Approximately 60 per cent of sewerage discharge is subject to treatment.

#### **Northern Territory**

Information relating to water supply in the Northern Territory may be found in Chapter 23, Water Conservation and Irrigation.

#### **Australian Capital Territory**

The water supply, sewerage and drainage systems in the Australian Capital Territory are under the control of the Commonwealth Department of Works. The sources of the water supply are: Cotter Dam (capacity 1,034 million gallons), Bendora Dam (2,360 million gallons) and Corin Dam (16,600 million gallons). Water is fed from Bendora Dam by gravity to 22 major reservoirs. The maximum daily supply is 57 million gallons. An alternative supply is available from 9 pumps at the Cotter Dam at a rate of 38 million gallons per day.

The total population served in the Australian Capital Territory, which during 1971-72 consumed 7,173 million gallons of water, was 158,417 (at 30 June 1972.) In addition, the Canberra water supply system supplied 454 million gallons of water to Queenbeyan, New South Wales. The total number of water meters at 30 June 1972 was 41,421 and the total length of water lines was 809 miles.

The sewerage system for Canberra suburbs has three treatment works: the Weston Creek works provide for 132,000 persons, the Fyshwick works provide for 20,000 persons and the Belconnen works provide for 25,000 persons. There were 816 miles of sewerage, and 9 miles of sewer rising mains (at 30 June 1972). There were also 813 miles of storm-water drains.

### **Harbour boards and trusts**

The number and net tonnage of vessels which entered the major ports in each State during the years 1970-71 and 1971-72 are shown in Chapter 12, Transport, Communication and Travel (*see* page 339). Particulars of overseas and interstate cargo discharged and shipped are shown on pages 339-43 of the same chapter.

#### **New South Wales**

*The Maritime Services Board of New South Wales* exercises general control over intra-state shipping, including the survey and certification of vessels, the licensing of harbour craft and the examination and issue of certificates to officers. It is responsible for the provision of pilotage services, lights, beacons, buoys and other port facilities, imposes and collects rates and charges on goods and vessels, and is vested with the general control and management of the navigable waters and ports within the State. At the ports of Sydney, Newcastle and Botany Bay the Board is also responsible for the provision of adequate wharfage and channels and carries out all construction, maintenance and dredging work. Since 1 February 1936 the State enactments on port charges, including the Navigation Act of New South Wales, the Harbour and Tonnage Rates Act and the Sydney Harbour Trust Act, have been administered by the Maritime Services Board. The total revenue collections by the Maritime Services Board amounted to \$39,302,000 in 1971-72. This figure includes the revenue for the ports of Sydney, Newcastle and Botany Bay.

Financial details relating to these three ports are shown in the following table.

MARITIME SERVICES BOARD FUND: FINANCES OF THE PORTS OF SYDNEY  
NEWCASTLE AND BOTANY BAY, 1967-68 TO 1971-72

(\$'000)

Year	Revenue				Expenditure(a)			Surplus(+) or deficit(-)
	Wharfage and transhipment rates	Tonnage rates and berthing charges	Other charges	Total	Administration and maintenance	Interest, debt redemption, exchange, etc.	Total	
1967-68	12,664	2,024	5,645	20,333	10,830	9,451	20,280	+ 53
1968-69	13,580	2,085	7,294	22,959	12,150	10,716	22,866	+ 93
1969-70	14,854	2,271	7,875	25,000	12,816	12,120	24,937	+ 64
1970-71	15,105	2,150	13,042	30,297	15,885	14,642	30,527	- 229
1971-72	17,160	2,296	10,915	30,371	17,073	13,059	30,132	+ 239

(a) Excludes capital expenditure but includes transfers to the Renewals Fund Reserve Account (\$4,940,000 in 1967-68, \$5,800,000 in 1968-69, \$6,760,000 in 1969-70, \$9,140,000 in 1970-71, and \$6,600,000 in 1971-72).

*Port of Sydney.* The wharves are situated close to the business centre of the city, about 4 or 5 miles from the Heads. At 30 June 1972 there were 5 dolphin berths, 3,550 feet long, and 76 effective commercial cargo berths, with a total length of 36,792 feet, controlled by the Board. Accommodation for harbour craft amounts to 2,245 feet, while the length of other berths, including oil and private wharves, totals 11,791 feet. Depth of water at wharves is up to 43 feet. Special facilities for the storage and handling of products such as wheat, wool, coal, etc. are provided. Docking facilities are available for large vessels at the Captain Cook Graving Dock. Container facilities became available in March 1969 with the opening of the eastern section of the Balmain container terminals to cellular container vessels.

*Port of Newcastle.* Shipping at Newcastle is concerned primarily with the coal, iron and steel and other heavy industries located in the district. However, facilities are available for the shipment of wool, wheat and frozen meat, and a wharf is available for timber.

*Botany Bay.* The port is primarily a discharging centre for the oil refinery at Kurnell, near Sydney, and one jetty with a tanker berth each side of the jetty is available as well as three tanker offshore moorings with submarine pipelines.

*Port Kembla* is the port of the southern coalfields and for the major industrial areas in and about Wollongong.

*Other ports.* In addition to the port of Sydney, Newcastle, Port Kembla, and Botany Bay, the Board controls 29 outports along the coastline of 609 miles. The shipping trade of these outports is relatively small.

## Victoria

The *Port of Melbourne* comes under the control of the Melbourne Harbor Trust Commissioners, a financially independent statutory organisation, with a full-time chairman and five part-time commissioners.

The advanced methods of cargo handling which have developed with the advent of container, unit load, and roll-on roll-off vessels now entering the Port, have required, during the past 10 years an expenditure in excess of \$60 million on capital works, and the current capital value of the Port of Melbourne is more than \$103 million. The Port covers an area of 10.5 square miles and provides 12 miles of berthage, with 92 commercial berths.

The main container complex, Swanson Dock, has four berths. Constructed at a cost of \$20 million, and taking some 6 years to complete, this 90 acre complex handled 3.56 million tons of containerised cargo in 1972.

Currently, the Port of Melbourne has seven roll-on roll-off berths. The Webb Dock area, the Port's busiest roll-on roll-off complex, was originally a ferry berth (constructed in 1959) with a four acre back-up area, and has now been developed into a three berth complex, with a back-up area of 20 acres. During 1972 Webb Dock handled 2.36 million tons of cargo.

The depth of water (low water ordinary spring tide) from the main channels to the principal wharves is 31 to 37 feet.

The following table shows particulars of the financial operations of the Trust.

MELBOURNE HARBOR TRUST: FINANCES, 1968 TO 1972

(\$'000)

Year	Gross loan indebtedness at 31 December	Revenue		Expenditure				Total	Surplus (+) or Deficit (—)
		Wharfage and tonnage rates	Total	Operation, administration and maintenance	Interest, debt redemption, exchange, etc.	General reserve, depreciation, renewals and insurance account			
1968	36,029	8,357	13,573	6,972	2,381	4,002	13,355	+218	
1969	37,888	8,901	14,321	7,903	2,127	4,049	14,079	+242	
1970	40,690	9,475	15,047	8,512	2,869	3,419	14,800	+247	
1971	44,059	10,038	16,263	9,719	3,152	3,158	16,029	+233	
1972	45,644	9,398	15,478	10,569	2,506	2,867	15,942	—464	

The *Port of Geelong* operated by the Geelong Harbor Trust, has available 17 effective berths, plus 2 berths at the Commonwealth Explosives Pier, Point Wilson, owned and operated by the Commonwealth. Two modern dry bulk berths (Lascelles Wharf Nos 1 and 2 berths) became fully operational in 1970 and a roll-on/roll-off berth at Corio Quay came into operation in January 1971.

*Port of Portland.* Development projects currently in hand will within the next year or so, provide the port with facilities necessary to handle fully laden carriers up to 70,000 tons deadweight. In the first instance No. 1 berth and its approaches are being dredged from 36 feet to 40 feet low water and the bulk grain gallery extended to the outer limits of the K. S. Anderson wharf. Trade handled during 1971-72 rose by 9.5 per cent to an all time high of 922,294 tons; operating revenue showed a corresponding increase of 6.3 per cent to \$1,326,846.

### Queensland

The ports of Queensland generally are administered by harbour boards with members representing the cities, towns and districts served by the ports. Where no board is established, control is exercised by the Corporation of the Treasurer through the Department of Harbours and Marine.

Harbour Board ports are Bowen, Bundaberg, Cairns, Gladstone, Mackay, Rockhampton and Townsville.

Corporation of the Treasurer principal ports are Brisbane, Hay Point, Lucinda, Maryborough, Mourilyan, Thursday Island and Weipa.

*Brisbane*, the busiest port in the State, is a river port of world standard dredged to a sufficient depth to accommodate all classes of vessels on the Australian trade. The port, as well as providing wharves for containers, bulk grain fertiliser, freezer goods, petroleum products and general cargo also provides shipbuilding and ship repair facilities including a dry dock accommodating vessels up to 70,000 tons deadweight. Two refineries, situated at the mouth of the river can supply all ships' bunkering requirements.

The finances of Brisbane Harbour for the years 1967-68 to 1971-72 are shown in the following table.

**BRISBANE HARBOUR: FINANCES, 1967-68 TO 1971-72**  
(\\$'000)

Year	Loan indebtedness at 30 June	Receipts		Payments	
		Harbour dues	Total	Working expenses(a)	Total
1967-68 . . .	4,504	2,019	3,475	3,039	3,376
1968-69 . . .	4,890	2,333	3,622	3,156	3,483
1969-70 . . .	5,726	2,320	3,772	4,542	4,927
1970-71 . . .	5,576	2,685	3,788	3,556	4,004
1971-72 . . .	6,352	3,001	4,349	3,308	3,789

(a) Excludes interest and redemption included in total.

### South Australia

*Department of Marine and Harbors.* All South Australian harbours are controlled by the Department of Marine and Harbors, which is responsible to the Minister of Marine for the discharge of its duties and functions. The most important ports are the six deep-sea ports of Port Adelaide, Port Pirie, Wallaroo, Port Lincoln, Port Giles and Thevenard. In South Australia there are also eight privately-owned and operated ports. The principal of these are Whyalla, Ardrossan, Rapid Bay, and Proper Bay (Broken Hill Pty Co. Ltd), Port Augusta (Commonwealth Railways) and Port Stanvac (Petroleum Refineries (Aust.) Pty Ltd). Maximum depths of water (low water) at the wharves of the main ports range from 27 feet at Port Pirie to 35 feet at Port Adelaide. The following table shows the finances of the Department for 1967-68 to 1971-72.

**DEPARTMENT OF MARINE AND HARBORS, SOUTH AUSTRALIA: FINANCES**  
1967-68 TO 1971-72  
(\\$'000)

Year	Loan indebtedness at 30 June	Revenue	Expenditure from revenue			Surplus(+) or Deficit(-)
			Working expenses	Interest	Total	
1967-68 . . .	45,478	6,418	4,196	1,869	6,065	+352
1968-69 . . .	47,614	6,653	4,365	1,957	6,322	+331
1969-70 . . .	50,736	7,282	4,265	2,176	6,442	+840
1970-71 . . .	55,081	7,628	5,056	2,431	7,487	+141
1971-72 . . .	59,589	7,611	5,346	2,796	8,142	-530

### Western Australia

The *Port of Fremantle* is operated and controlled by the Fremantle Port Authority. The port covers an extensive water area of some 180 square miles and comprises an inner and an outer harbour. The inner harbour includes 20 deep-water land-backed berths, providing more than 550,000 square feet of covered storage space and 13,104 feet of wharf berth accommodation. All inner harbour berths are dredged to a low water depth of 36 feet. The outer harbour includes 3 main anchorages, Gage Roads, Owen Anchorage and Cockburn Sound. Deep-water jetties, including the oil refinery jetty in Cockburn Sound, are available in the outer harbour. Ocean-going deep draft ships enter the Sound by means of a channel dredged through Success and Parmelia Banks to a low water depth of 45 feet and a bottom width of 500 feet. In the outer harbour there are 3 tanker berths each with a low water depth of 44 feet at the Kwinana oil refinery, 2 berths at the nearby steelworks jetties with a low water depth of 38 feet, 2 berths at the alumina works jetty with a low water depth of 38 feet and 1 berth at the bulk cargo jetty with a low water depth of 44 feet. There is also a special berth for the handling of explosives. Total effective berth accommodation in the outer harbour is 6,110 feet. Gross earnings for 1971-72 amounted to \$10,969,782, working expenses to \$7,960,162, interest charges on loan capital \$1,302,733, and loan indebtedness totalled \$24,156,847.

The Ports of *Albany, Bunbury, Esperance, Geraldton* and *Port Hedland* are controlled by their respective Port Authorities.

*Other ports.* The following ports are controlled by the State Government Harbour and Light Department: Broome, Carnarvon, Derby, Onslow, Port Walcott, and Wyndham. Ports privately controlled comprise Yampi and Dampier, both operated by iron ore mining companies, and Exmouth, the port serving the communications installation at North West Cape. A private buoyed sea terminal is operated at Barrow Island for the shipment of crude oil, and private interests ship salt at Cape Cuvier, and salt and gypsum from Useless Loop in Shark Bay.

### Tasmania

Port services in Tasmania are under the control of eight port authorities: the Marine Boards of Hobart, Devonport, Burnie, Circular Head (Stanley), King Island (Currie), and Flinders Island (Whitemark); the Port of Launceston Authority and the Smithton Harbour Trust. The ports at Hobart, Launceston (Bell Bay), Burnie and Devonport are general cargo terminals for overseas shipping. Other ports catering primarily for overseas export of specialised cargoes include Port Latta (iron ore pellets), Triabunna (wood chips), and Port Huon (fruit).

#### AUTHORITIES CONTROLLING PORTS, TASMANIA: FINANCES 1967-68 TO 1971-72 (\$'000)

## CHAPTER 19

### EDUCATION, CULTURAL ACTIVITIES, AND RESEARCH

For the most recent statistics available on subjects dealt with in this chapter reference should be made to the series of mimeographed bulletins on social statistics issued by this Bureau. These bulletins comprise *Schools* (13.5), *University Statistics Parts 1, 2, 3* (13.7, 13.8, 13.9), *Colleges of Advanced Education* (13.10) and *Teacher Education* (13.12). The *Quarterly Summary of Australian Statistics* (1.3) contains summarised information on these subjects, and financial aspects are dealt with in the annual bulletins *Public Authority Finance—Commonwealth Authorities* (5.12), *Public Authority Finance* (5.33) *Public Authority Finance—State and Local Authorities* (5.43) and *Expenditure on Education* (5.44). The annual Reports of the respective State education departments provide detailed statistical and other information about particular States. The Commonwealth Department of Education issues publications on aspects of primary, secondary and tertiary education.

### EDUCATION

An account of the development of the Australian school system up to 1929 may be found in Year Book No. 22. In Year Book No. 40 a review of changes which occurred up to 1951 and of the practices then current was presented. The present situation is summarised in the early part of this chapter, in textual material provided by the Commonwealth Department of Education.

#### Pre-school education and child care

Pre-school centres were first established in the Australian States by voluntary organisations and a large number are still supported and supervised by them. The organisations include kindergarten unions, day nursery and creche associations, pre-school associations and denominational kindergartens. All now receive financial assistance from State governments but the amounts granted vary considerably from State to State. Other pre-schools are subsidised directly by States. In Tasmania the Education Department has accepted the responsibility for pre-school education. The development is towards incorporating pre-school education into primary schools rather than providing separate pre-school centres. In the internal Territories teachers are employed by the Commonwealth Department of Education; buildings are also provided in the Territories. In Queensland the State Government is also taking steps to provide pre-school education. In all cases parents assist in the provision of equipment.

Pre-school centres are situated in city and country areas and programs are adapted to meet the needs of the children attending. A typical pre-school centre provides half-day sessions for two groups of children. Active parent participation in the running of the centres is encouraged. A limited number of creches and day nurseries provide full-care in closely settled areas, and there is an increasing demand for care for children of working mothers, met in part by privately run centres of varying standards. In a few cities occasional care is available and there are a few residential centres. Major developments have taken place recently in the fields of pre-schooling and child care. The Government announced in February 1973, the appointment of the Australian Pre-Schools Committee, which will become a commission after the passage of enabling legislation. The Committee is to recommend measures the Government should adopt to ensure that all children are given the opportunity to attend pre-school for one year and to establish child care centres for children below school age to meet the needs of children of working parents and under-privileged families. The assistance under the scheme is to begin on 1 January 1974 and priority will be given to establishing centres in localities where the need is greatest.

The previous Australian Government introduced a new scheme of direct financial assistance to eligible and approved non-profit making organisations and local government authorities for child care centres which provide full day care and give priority of admission to children in special need. An amount of \$5 million was set aside for this scheme in 1972–73, including \$200,000 for research. The present Government has since appointed the Child Care Standards Committee to advise it on

the establishment of standards and on the payment of grants. An Advisory Committee on Child Care Research has also been set up to recommend on the payment of grants for appropriate research projects.

It is proposed to incorporate the present Child Care Scheme into the new program of assistance to begin in 1974 which will result from the work of the Australian Pre-Schools Committee.

The Australian Pre-School Association is a national body representing the voluntary organisations who have as their main concern the welfare and education of children of pre-school age. With some financial assistance from the Commonwealth the Association co-ordinates pre-school work for which it sets standards. It administers and supervises the six Lady Gowrie Child Centres which were established by the Commonwealth in consultation with the Australian Pre-School Association in 1940.

*Lady Gowrie Child Centres.* These six Centres, one in each State capital city, were planned to give stimulus to progress in the field of child development, and this has led to the study of educational practice at the pre-school level. They provide opportunities for demonstration and research based on early childhood education. Committees of local management for each Centre include psychiatrists, paediatricians, nurses, social workers, educators and lay persons who, in consultation, have developed an education program based on child development. These Centres are financed mainly by Commonwealth grants. The Commonwealth contribution for 1972-73 was \$231,000.

Radio and television bring some experience of pre-school education within the reach of practically every pre-school child in Australia. The Australian Broadcasting Commission pioneered the program 'Kindergarten of the Air', a twenty-five minute session, broadcast throughout the country from Monday to Friday. The half-hour television program 'Play-School' is also available twice each week-day to children of kindergarten age in State capital cities and country areas.

## Primary and Secondary Education

### Legal basis and administrative responsibility for education

Constitutional authority for education rests primarily with the six State governments. The federal Department of Education is responsible for the administration of education in the internal territories (Northern Territory and Australian Capital Territory) (*see the chapter The Territories of Australia*) and is becoming increasingly involved in financing education throughout Australia (*see pages 674-81*).

Responsibility for framing educational policy and having it put into effect rests with the Minister for Education in each State who is a member of State Cabinet. The administrative authority in each State is a department of education established by an Act of Parliament and headed by a Director-General. The education departments are divided into divisions administering primary, secondary and technical education. (In New South Wales there is a separate Department of Technical Education; in South Australia the Department of Further Education is responsible for technical education.) Other divisions are responsible for such matters as teacher recruitment and in-service training, audio-visual education, curriculum and research, education of atypical children, physical education, psychology and guidance. In addition to the central organisation which serves the State, regional offices of education have been created in New South Wales, Victoria, Queensland, South Australia, and Tasmania under a policy of decentralisation of administration.

During the nineteenth century, the six Australian States established government departments responsible through parliament for the provision of formal education as follows:

*New South Wales.* The Public Instruction Act, 1880 established a Department of Public Instruction. An amendment to the Act in 1916 made schooling compulsory.

*Victoria.* The *Victorian Education Act* 1872 provided for the establishment of an education department, a State Minister for Education and made schooling in Victoria free, compulsory and secular. The Act dates from the first of January 1873.

*Queensland.* The *Education Act* of 1875 established the Department of Public Instruction administered by a responsible Minister of the Crown. The provision in the Act for compulsory schooling was not fully enforced until 1 May 1900.

*South Australia.* The Compulsory Education Act 1875 established a Council of Education to administer public schools and made attendance compulsory (70 days in each half year) for all children between the ages of 7 and 13.

*Western Australia.* The *Education Act* 1893 established a Department of Education to replace the central Board of Education established under the *Education Act* 1871. An amendment to the 1893 Act made enforcement of compulsory education more effective in 1899, although the *Education Act* 1871 had provided for a degree of compulsion.

*Tasmania.* The *Education Act* 1885 established an education department responsible to a Minister of the Crown. Compulsory schooling was adopted in 1869.

School attendance is compulsory throughout Australia between the ages of 6 and at least 15 in New South Wales, Victoria, Queensland and South Australia, until the year in which a student turns 15 in Western Australia, and until the age of 16 in Tasmania. The various Education Acts require that all children between the prescribed ages must attend either a government school or some other recognised educational institution. Exemptions may be granted on the grounds of physical isolation from school, physical disability or family hardship. Education by correspondence is available to exempted students from State education departments.

Commencement of the school year varies between States and usually occurs between the end of January and mid-February. The year usually ends in mid-December for the long summer vacation. Two short vacations divide the school year into three terms.

### Government Schools

Government primary schools usually have mixed classes of boys and girls. At the secondary level practices vary, but the trend is towards co-educational schools.

Tuition at government primary schools is free in all States. Parents are expected to bear the cost of textbooks, uniforms and personal equipment and to pay fees for the use of sports equipment and other facilities. However, these expenditures are tax deductible and the cost of textbooks is in some States subsidised by the government.

Legislation in Queensland and Victoria makes provision for the registration of teachers in government schools. All teachers in South Australia will be registered from 1974. No registration of teachers is yet required in New South Wales, Western Australia and Tasmania.

### Non-government schools

Approximately 20 per cent of Australian children attend non-government primary and secondary schools, sometimes known as 'private' or 'independent' schools. The majority of the schools are conducted by, or are under the auspices of, various religious denominations, particularly the Roman Catholic Church (about 80 per cent in 1972), the Church of England, Presbyterian and Methodist Churches. A few non-government schools are undenominational and are conducted under the auspices of corporate bodies.

Non-government secondary schools have tended to cater for boys and girls separately, but recently a few major schools have become co-educational. The schools follow curricula similar to those laid down by State education departments and prepare their students for examinations conducted by public examining bodies. The methods adopted by education authorities to ensure an acceptable standard of education at non-government schools vary from State to State. New schools are inspected and approved by the State education department. The nature of this approval varies but generally the education department must be satisfied that the education provided is efficient and regular and that the buildings and facilities are suitable.

The States of Victoria and Tasmania require teachers at non-government schools to be registered.

Non-government schools charge tuition fees and, where applicable, boarding fees. Payment is not insisted on in some Roman Catholic parish schools in cases of family hardship, and at the majority of non-government secondary schools, privately endowed scholarships are available and fees are normally reduced for children of clergy and where two or more members of one family attend the same school.

Certain State government scholarships and bursaries are tenable at approved non-government secondary schools. Since 1967, State governments and the Commonwealth Government have introduced direct assistance to non-government schools, usually in the form of student allowances. Most State governments also assist non-government schools with approved building projects. For details of Commonwealth government assistance for the building and equipping of science laboratories and libraries at secondary schools, see page 673.

### Primary education

Although school attendance is not compulsory until the age of 6, most Australian children begin at about 5 in infants schools or classes attached to the primary school. In some States, the first year of the infants department is known as kindergarten. The emphasis in these infants classes, which cover two or three years, is given to games, the development of social attitudes and the informal side of education. There is a gradual movement towards more formal activities in the second and third years, and at the same time creative expression in painting, drawing, handwork, dancing and dramatisation is encouraged.

Children attend primary schools in their own districts on five days each week, and the school day is generally broken up into three or four sessions with breaks between. Daily instruction lasts for about five hours, made up of twenty or thirty minute lessons, and special periods are set aside for

physical education and sport. In general, a class is taken by one teacher who teaches all the subjects set out in the curriculum for that particular grade. However, in some areas new primary schools are being built according to the 'open plan' concept. This allows for more flexible teaching arrangements, where two or more teachers may supervise up to 70 pupils, who are divided into smaller groups during the day for separate activities, including individual study.

Syllabuses of instruction, with emphasis on basic or 'tool' subjects, social studies, and the English language, are drawn up by the education departments, although the teacher may be free to modify the course. In some of the more progressive primary schools, new or more advanced courses in subjects such as foreign languages, science and mathematics are being introduced to prepare children more thoroughly for secondary schooling. Increasing use is being made in the classroom of television, films, tape-recorders and other modern teaching aids.

When primary education has been successfully completed, usually after seven years, the child progresses automatically to a nearby secondary school. Factors determining the type of secondary school a child attends may include the headmaster's recommendations, tests of ability and achievement, the child's wishes and those of his parents.

### Secondary education

In secondary schools children do not usually remain in the one class all day, as they do not all study the same subjects. The subjects offered include a number already studied in primary school, such as English, physical education and music, and new ones such as foreign languages, technical and commercial subjects, along with more detailed and specialised studies in science, history, geography and mathematics. Each school day is divided into 'periods' and the students are taught by a number of teachers, each specialising in a particular group of subjects. In some secondary schools the program in the junior forms is based upon integrated studies and aims at developing pupil-centred activities.

The most common type of secondary school is the comprehensive or multi-purpose high school, which offers a wide range of subjects. To cater for this diversity, most high schools now have modern facilities for the teaching of domestic science, commercial subjects, woodwork and other technical subjects. In some States there are, however, separate high schools specialising in technical, agricultural, commercial or home science fields; some of the agricultural high schools are residential. The curriculum in these specialist schools consists of general academic subjects combined with practical training.

In New South Wales, the Conservatorium High School provides a full six-year secondary course for students who intend to pursue careers in music.

There are also schools in country centres known variously as 'area', 'consolidated', 'district' and 'rural' schools, some of which offer up to four years of secondary study. Matriculation colleges have been developed in major population centres in Tasmania, providing the final two years of secondary schooling. Secondary colleges are also being established in the Australian Capital Territory.

A diagram of State and territorial school systems showing grades, examinations and ages, is shown on plate 37, page 646.

### Examinations

For information on examination procedures up to 1971, see Year Book No. 55, pages 485-6 and Year Book No. 57, page 629.

Traditionally, public examinations set by central examining authorities in each State at junior and senior secondary levels controlled and influenced the curricula to a very large extent. In recent years the junior level examinations, taken at the end of the third, fourth or fifth year of secondary schooling, have been abolished, and their place has been taken by internal school examinations and school assessment. While the senior level examination, taken in the final year and used for matriculation purposes, is still retained in most States, there is a trend towards the abolition of external examinations at this level also. These changes in the examination systems have allowed the development of more broadly-based curricula designed to meet the varying needs, interests and abilities of the students, an increasing proportion of whom are staying on at school beyond the minimum leaving age.

In general, students in the early years of secondary schooling study a basic core of subjects together with some electives, specialisation taking place at a later stage in the course. Experimental projects in curriculum development are being carried out, and individual schools and teachers have more freedom in choosing their educational programs. Certificates awarded at the end of secondary schooling are: New South Wales and the Australian Capital Territory, Higher School Certificates; Victoria, Higher School Certificate; Queensland, Senior; South Australia, and Northern Territory, Matriculation; Western Australia, Leaving; Tasmania, Higher School Certificate.

### Special facilities for students

Details of medical and dental inspection of school children, and the provision of free milk are given in Chapter 14, Public Health. In Year Book No. 55, a general description is given of provisions for isolated areas, schools of the air and correspondence schools (pages 494 and 495), handicapped children and physical education (page 495), and educational guidance and school broadcasting and television (page 496). The following particulars supplement that information.

*Aboriginal education.* Aboriginal children in towns and cities attend the same schools as other Australian children. The curriculum of schools in distinctive Aboriginal communities is adapted to the background and the needs of the children; for example, bilingual education and an emphasis upon traditional arts, crafts and skills are features of an increasing number of Northern Territory schools in Aboriginal towns on reserves. There is unrestricted opportunity for academic progress for Aboriginal students with the ability to proceed through high school to tertiary education. This progress is encouraged and assisted by an Australia-wide Commonwealth Government scheme of Aboriginal secondary grants available to all secondary school children of Aboriginal descent on a non-competitive basis, and an Aboriginal Study Grants Scheme of similar scope covering fees and allowances in respect of tertiary courses. These two schemes form part of the assistance, financial and otherwise, provided by the Commonwealth in the field of Aboriginal education following the 1967 Referendum and Constitution Alteration (Aboriginals) 1967 (*see also* Scholarships and bursaries below). Commonwealth grants to the States for educational projects designed for the benefit of Aboriginal students totalled \$2,887,000 in 1972-73, a considerable proportion of this sum being devoted to the extension and development of pre-schooling facilities.

*School broadcasting.* Both radio and television school broadcasts continue to be used extensively by schools. They are produced by the Australian Broadcasting Commission in co-operation with the State Education Authorities and, as a result of the increasing number of transmitting stations, are now available to almost all schools in the Commonwealth. Approximately 96 per cent of schools make some use of the radio programs and about 75 per cent, of television. During the year almost 3,000 radio programs and about 300 television programs were produced and, in addition, over 200 television programs, relevant to Australian needs, were purchased overseas. The increasing use of audio and videotape recorders by schools, especially in secondary departments, gives a flexibility of usage that has greatly increased the utilisation of programs. There are about 10 hours of radio and 25 hours of television available each week in each State.

*Handicapped children.* The Commonwealth Department of Social Security (previously Department of Social Services), in conjunction with the Commonwealth Departments of Health and of Education (previously Department of Education and Science), commenced a survey of handicapped children in 1970. Payments under the *States Grants (Independent Schools) Act* 1969, which provides assistance to eligible independent schools, including special independent schools for handicapped children, commenced in 1970. Assistance to eligible institutions training handicapped children is also available under the *Handicapped Children (Assistance) Act* 1970 (*see also* page 673). From 1974 the Australian Government will provide substantial additional grants specifically for the education of handicapped children by State and voluntary authorities, and for the training of teachers of the handicapped.

### Scholarships and bursaries

All States have schemes of financial assistance to school students, mostly at the secondary level, through scholarships or bursaries. As tuition in government schools is free, this assistance is usually in the form of maintenance allowances, both for children living with their parents and for those living away from home. These allowances may be paid in a lump sum or in instalments throughout the year. Awards are usually made on the results of a competitive examination, and sometimes a means test is applied. Other government and private authorities, such as the Repatriation Department and the Legacy War Orphans Fund, assist certain categories of students with their school education. Many non-government schools also award scholarships, on a competitive basis, which enable students to attend those particular schools at reduced fees or without payment of fees.

In 1964 the Commonwealth Government, with the co-operation of the State education departments, introduced a program of secondary scholarships to encourage successful candidates to complete the final two years of secondary schooling. From the beginning of 1973, this scheme is being phased out and being replaced by the Commonwealth Senior Secondary Scholarship Scheme. Further details of both Schemes are given on page 665.

Various forms of financial assistance, both government and non-government, are available to help Aborigines to undertake further studies. In 1972, over 700 scholarships were awarded by ABSCHOL, a scholarship scheme organised by the Australian Union of Students; 1000 primary and 218 secondary scholarships were provided by the Aboriginal Education Incentive Scholarship Fund in Victoria; and 97 scholarships (23 primary, 71 secondary and 3 adult) were provided by the Aboriginal Education Council in New South Wales. *See* page 666 for details of the Aboriginal Study Grants Scheme, begun in 1968 by the Commonwealth.

#### **Subsidised transport to and from school**

All the States have systems of subsidies by which transport is free or at a concession rate for children who have to travel to and from school daily. In some States an allowance is paid if private transport has to be used.

#### **Assistance for children living in remote areas.**

In 1973 the Australian Government introduced a scheme of financial assistance to enable children living in isolated areas to have improved educational opportunities. Benefits include allowances of up to \$1,004 per annum, of which \$350 is free of means test, for pupils who must live away from home to attend school. Assistance of up to \$350 per annum is paid to pupils taking studies through State education department correspondence schools.

#### **School buildings**

The increase in the school population in the last decade led to an expansion in school building. To cope with this growth in population, it has been necessary to make use of temporary and emergency structures. Quite large schools are being built in stages to match increases in local population in new and rapidly developing suburbs in metropolitan areas. For details of assistance provided by the Commonwealth for the building and equipping of science laboratories and library facilities in secondary schools, *see* page 673.

#### **Textbooks, materials and other equipment**

The State education departments supply government schools free of charge with essential equipment including scientific apparatus, maps, blackboards, chalk, cleaning materials, and non-consumable equipment for commercial, home science and technical subjects. Garden tools and physical training equipment are also supplied in most States. Readers and writing equipment for individual students are sometimes supplied free in primary schools, and several education departments produce monthly school magazines which are supplied free or at a nominal price. In primary schools (except in one State where textbooks are made available free to children in both government and non-government primary schools) and in secondary schools, textbooks must, however, be purchased by students. In several States, schools own stocks of textbooks which are hired to students, and in one State, secondary textbooks are sold at reduced prices. In four States certain textbook costs are subsidised for students attending government and non-government schools. The parent organisations, with the assistance of subsidies from the education departments, are usually responsible for providing equipment such as radios and television sets, film strip projectors, pianos, duplicators and, in particular, library books.

#### **Teaching aids**

Each State education department has a branch producing and distributing teaching aids. Film strips and posters are distributed free or at low cost. Films are held in central libraries and are requisitioned by schools as required for teaching purposes. Some central libraries are able to provide copies of audio and videotape recordings. Commonwealth financial assistance under the Secondary Schools Libraries Program is available to State education departments for a range of audio-visual equipment.

#### **Parent organisations**

In Australia, where all government schools are administered by central departments, there is limited opportunity for local participation in education. However, increasing involvement of members of the community in education is being actively encouraged in a number of States and in the Territories. Public interest is expressed through parents committees or organisations of parents and other citizens interested in supporting their local school. The Education Acts of all States provide for the formation of groups of this type, whose aims are to promote an interest in the school by bringing

parents and teaching staff together, to help provide supplementary teaching aids and recreation materials, to foster the regular attendance of children at school, and to help find accommodation for teachers. The associations do not exercise authority over the staff for the management of the school. In several States the general maintenance of school buildings, equipment and grounds is a statutory responsibility of the parent groups, costs being covered by government grants. Lunch canteen services at local schools are maintained by groups in some States. Parent groups have established school children's insurance schemes, operated through State Government insurance offices or private insurance companies. These schemes cover children for accidents which may occur between the time of leaving home for school and returning home by the usual direct route. State-wide councils of federations of parent groups are associated in a federal body, the Australian Council of State School Organisations.

Many non-government schools also have parents associations, which may raise funds for special projects.

### Research

All State education departments have branches undertaking research directed towards departmental activities. The work of the research branches is concerned with such matters as curriculum content, new teaching methods, evaluation procedures, wastage rates and education statistics. Education research is also carried out by institutes such as the Victorian Institute for Educational Research, by research faculties and departments of education in universities, by colleges of advanced education, by the Commonwealth Department of Education and by the Australian Council for Educational Research.

### Curriculum development

While State education departments are responsible for the development of the curricula followed in their schools, the Commonwealth is prepared to consider support for proposals in the field of curriculum development if they are put forward by the States. Three such proposals are at present receiving Commonwealth financial support. They are:

*Australian Science Education Project.* This project is developing science learning materials for the first four years of secondary school. The Australian Government will contribute \$875,000 to the cost of the Project, and the States \$525,000, over the five-year period commencing in 1969. The Project will complete its scheduled task in March 1974.

*National Committee on Social Science Teaching.* This Committee was established in 1970 as a joint project between the Australian Government and the States to help foster development and improvement in the teaching of social science in Australian schools.

*Asian languages and cultures.* The report of the Advisory Committee on the Teaching of Asian Languages and Cultures, a Committee set up by the Australian Government in 1969, was tabled in Parliament in March 1971. As a result of the Committee's findings the Australian Government agreed in 1972 to contribute \$1.5 million over five years to a joint program with the States in this area of the curriculum. A joint Australian Government-States committee has been established to co-ordinate this program.

In June 1973 the Australian Government announced that it was establishing, in co-operation with the States, a curriculum development centre to undertake and promote curriculum development and to develop and assess teaching materials. The centre will be funded by the Australian Government.

## Numbers of schools, teachers and students

The statistics which follow relate generally to schools providing education according to the primary or secondary school curricula of the various State education departments, or both, whether provided in government or non-government schools. Junior technical schools, correspondence schools, and schools in institutional homes, hospitals and similar establishments are included. Institutions providing only pre-school education, senior technical and agricultural colleges, evening schools, continuation classes, and institutions such as business colleges and coaching establishments are, as a rule, excluded.

School censuses are conducted annually at or about the beginning of August throughout all States and Territories of Australia. The numbers of students in the tables which follow refer to enrolments at the school census date. The numbers of schools and teachers refer to the position at dates

which vary from State to State and in some instances from year to year. While it has not been possible to present all figures on a uniform basis between States, continuity of the figures for any one State over the period of years shown has been maintained as far as possible.

### Schools, teachers and students

The statistics of government and non-government schools, teachers and students in 1972 and earlier years are shown in the following tables. For more detailed statistics, see annual bulletin *Schools* (13.5).

1968	84,922	5,579	2,637	20,467	5,052	1,368	105,389	10,631	4,005

(a) Excludes teachers-in-training generally. (b) The methods used for calculating equivalent full-time units of part-time teaching vary from State to State, between government and non-government schools, and between primary and secondary schools within States. For most schools the information is based on either the total hours worked or total number of class periods taken in a week by part-time teachers, in relation to the normal hours worked or periods taken by full-time teachers. (c) If a full-time teacher teaches both senior and junior technical school pupils, he is counted as part-time in these statistics (which include junior technical, but not senior technical schools), if his teaching load in the junior school is less than 75 per cent. (d) Since 1969, the Queensland Education Department has employed only full-time teachers. (e) Unqualified teachers and teaching assistants at mission schools are excluded.

GRADES AND EXAMINATIONS IN THE PRIMARY AND SECONDARY SCHOOL SYSTEMS IN EACH STATE AND TERRITORY, 1972

The grade terminology follows, as nearly as possible, that used in government primary and high schools in each State in 1972. It is not necessarily used in all types of schools. The grades have been written in to agree with the age-scale shown on the diagram, in order to indicate differences in age-grade patterns between States. However, age-grade information is not precise enough to allow determination of accurate average age of students in each grade; and the age indications are therefore only approximate. The diagram should not be taken as a comparison of academic standards of grades between States. For a more detailed presentation of the systems operating in each State, reference should be made to diagrams etc. appearing in the annual reports of State Education Departments.

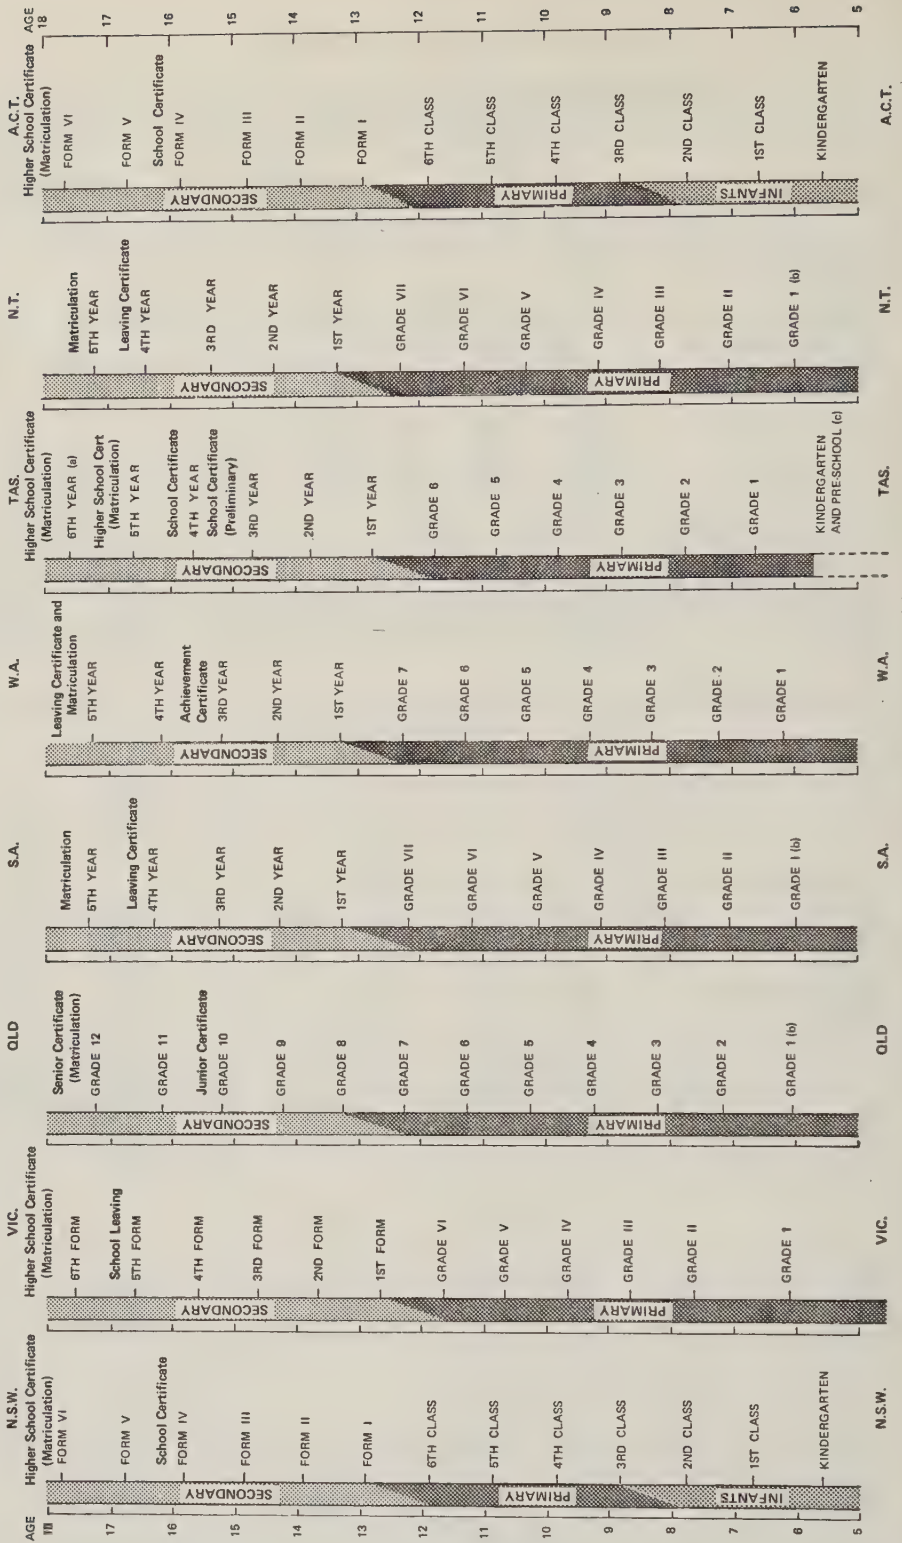

PLATE 37

(a) In Tasmania many students study for the Higher School Certificate over a two year period.  
(b) Preparatory grades are attached to some schools in Queensland, South Australia and the Northern Territory.  
(c) In Tasmania, many students attend two years pre-school, one year Kindergarten grade, or one year of both, before entering grade 1.

(a) Includes 290 primary students (151 males, 139 females) whose ages are not known.

## Universities

Applicants for enrolment in Australian universities are required to have reached matriculation standard, usually after five or six years of secondary education. Each university has its own regulations for matriculation, specifying the number and combination of subjects to be passed or the level of performance required. Students entering the universities have the choice of undergraduate study in various faculties. All universities also provide post-graduate courses of study.

In 1972 there were fifteen operative universities in Australia. Details of the courses offered by these universities, together with background information on their teaching and research programs, and a summary of general university development in recent years are given in Year Book No. 55, pages 507-9. By 1975, two new universities will be taking students, the Griffith University in Queensland and the Murdoch University in Western Australia. In addition, the Wollongong University College will become an autonomous university in 1975.

The following tables show statistics of university staff, student enrolments, assisted students, degrees conferred, diplomas and certificates awarded, income and expenditure. The first table gives summary statistics for each university and branch whereas the other tables provide State figures only. Reference should also be made to the annual publications *University Statistics, Parts 1-3* (13.7, 13.8, 13.9) for further details.

(a) Statistics for 1968 and 1969 refer to the situation at 30 June; and those for 1970, 1971 and 1972 refer to 30 April. (b) Adjusted for students enrolled for more than one course. (c) Includes external students.

## Assistance to university students

The Commonwealth Government, through the Commonwealth Scholarships Board, grants undergraduate and post-graduate scholarships to university students. Details of the Commonwealth Scholarship Scheme are given on page 665. Commonwealth, State and local governments also award cadetships and other assistance to their employees. Foreign students are assisted by the Commonwealth Government under arrangements such as the Colombo Plan. The universities themselves grant exhibitions and scholarships as well as special assistance to university staff, teachers, etc.

(a) Includes funds expended by various government departments and other bodies in respect of universities but not controlled by the universities. (b) In the case of endowments, only income from property and other investments of these endowments is included. The treatment of donations depends on the terms of the gift, etc. When the capital sum is specified to be expended over several years, only the portion of the capital sum allocated to each year is shown as income in that year, but if the capital sum is available for spending without limitation as to time, the full amount is recorded as income in the year it is received, irrespective of whether it is spent in that year or not. The capital value of land and buildings donated to the universities is not recorded as income, unless these properties are sold, in which case the amounts realised are included. (c) Excludes fees collected on behalf of student unions, adult education fees, ad hoc course fees and public examination fees.

### Colleges of advanced education

The Committee on the Future of Tertiary Education in Australia recommended that the tertiary level of education in Australia outside the universities should be further expanded and developed. As a result, the Commonwealth Advisory Committee on Advanced Education was set up in 1965. The Advisory Committee was replaced in 1971 by the Australian Commission on Advanced Education which continues to advise the Australian Government on the development of colleges of advanced education which provide training with a vocational emphasis.

In some States the colleges have been developed from existing technological institutions. The diploma-awarding schools or sections of technical institutions were generally separated from the trade, certificate and other sections of technical education, and were developed as colleges of advanced education receiving Commonwealth financial assistance. New colleges of advanced education have also been established.

Many colleges cater for a number of vocations in fields such as accountancy, architecture, art, applied sciences, building, business administration, data processing, domestic science, engineering, librarianship, medical laboratory technology, metallurgy, nutrition, pharmacy, teacher education and textile sciences. Other colleges of advanced education are specialist institutions, such as agricultural colleges, art schools, conservatoria of music, schools of paramedical studies and colleges offering courses in forestry and horticulture.

Administrative developments have occurred in the States to co-ordinate the activities of colleges of advanced education. Advanced Education Boards have been established in New South Wales, Queensland and South Australia. In Victoria, there is the Victoria Institute of Colleges. Tasmania has a Council of Advanced Education. In some States provision is also being made for co-ordination of all tertiary education, for example, by the establishment of the Higher Education Authority in New South Wales and the Tertiary Education Commission in Western Australia.

An Australian Council on Awards in Advanced Education has been established by joint action of the six States and the Commonwealth. One of the functions of the Council is to promote consistency throughout Australia in the nomenclature and standards used for awards in advanced education. It aims to do this by consultation between the States and Commonwealth accrediting agencies in the field of advanced education.

Further information about the development of colleges of advanced education can be found in the reports of the Australian Commission on Advanced Education and its predecessor, the Commonwealth Advisory Committee on Advanced Education, in particular the First Report, 1967-69, the Second Report, 1970-72, and the Third Report, 1973-75. Details of the maximum Commonwealth grants for the development of the colleges are given on page 670.

The following statistics refer to the operative institutions listed in the States Grants (Advanced Education) Act for 1970-72 as colleges of advanced education and the Canberra College of Advanced Education.

(a) Statistics comparable with other States are not available for Queensland. In 1972 the number of staff teaching at Queensland colleges of advanced education was 396 full-time and 546 part-time. These statistics include staff engaged in teaching in courses which were not at an advanced level. (b) Includes 95 full-time teaching staff at the Mitchell College of Advanced Education for whom details of subject field are not available.

## Teacher education

State education departments recruit most prospective teachers for government service from students leaving school after completion of secondary education. Each department offers training awards annually on the basis of academic merit and personal suitability. These awards cover the cost of a teacher training course (which may include university studies) and provide a living allowance. Students are usually required to enter into an agreement to serve for a specified number of years in the government schools of the State where they have trained. In some States intending teachers can obtain a scholarship at the first public secondary examination to enable them to complete teachers college entrance requirements.

Until now, State education departments have conducted teachers colleges to train teachers for government schools. However, significant developments have occurred since 1970. Some teachers colleges have either been incorporated within colleges of advanced education or have themselves become colleges of advanced education providing courses other than teacher education. From 1973 the other government teachers colleges will progressively become independent of State education departments. In most States the activities of the autonomous teachers colleges will be co-ordinated by the State advanced education authorities referred to on page 653; in two states there will be new statutory authorities to co-ordinate the activities of teachers colleges—in Victoria the State College of Victoria and in Western Australia the Teacher Education Authority. This development in the organisation of teachers colleges will be accompanied by an important change in the financing of the colleges. Commonwealth financial assistance to the States for teachers colleges has been in respect of building projects; for details of Commonwealth grants see page 671. From July 1973 Commonwealth financial assistance will be extended to cover the whole range of the teachers colleges activities, as in the case with universities and colleges of advanced education; this assistance will be provided under the advanced education legislation.

In 1972 there were 9 government teachers colleges in New South Wales, 14 in Victoria, 4 in Queensland, 5 in South Australia, 5 in Western Australia. Excluding kindergarten teachers colleges (see page 659) there were 7 private colleges in New South Wales, 6 in Victoria, 2 in Queensland and 1 in the Australian Capital Territory.

### Teachers for government schools

*Training of teachers.* Most teachers for government primary schools are trained in teachers colleges. Intending secondary school teachers either obtain a university degree with additional professional teaching training such as Diploma in Education, a diploma or certificate from a teachers college or follow a secondary teaching course at a college of advanced education. Teachers of specialist subjects, such as music, art, manual arts, domestic science and commercial subjects, receive from two to five years training which varies according to the institution concerned and the type of school in which the teacher is to serve. Where the specialist course is given at an institution other than the teachers college—e.g. at a university, college of advanced education, technical college or conservatorium of music, students are generally required to attend teachers college or university lectures in education, and in some cases the specialist course is followed by a year of professional training. Courses designed to train physical education teachers are offered in universities in some States and in at least one teachers college in every State.

Training for teachers of agricultural subjects in secondary schools consists of either an agricultural college diploma or a university degree course together with professional teacher training. Teachers of technical subjects in secondary schools may be trained in manual or industrial arts courses of two to four years duration at teachers colleges, colleges of advanced education, technical colleges or, in one State, at a university.

At several Australian universities, students wishing to take up teaching as a profession can receive their professional training along with the study of their teaching subjects as part of a first degree course. Courses of a similar nature are available at some colleges of advanced education where teacher education courses are integrated into the general teaching of the college.

The following table shows students undertaking teacher education courses in government and non-government colleges from 1969 to 1972. The figures exclude enrolments of practising and newly qualified teachers, and those teachers at short refresher courses and summer schools. They also exclude non-award students enrolled in part-time courses at the Technical Teachers College, Victoria.

(a) Excludes 877 students enrolled at kindergarten teachers colleges in 1969; 977 in 1970; 1,069 in 1971; and 1,216 in 1972. (b) Includes students at Technical Teachers College in Victoria gaining industrial experience, who were previously excluded.

(c) Includes 366 males undertaking a two year part-time course at the Technical Teachers College in 1971, and 400 in 1972.

The following table shows departmental students enrolled in the first year of their course and also those enrolled in the final year of their course. The figures exclude enrolments in one year courses which are mainly extension courses for students who have qualified as teachers.

DEPARTMENTAL STUDENTS ENROLLED IN THE FIRST  
AND IN THE FINAL YEAR OF A COURSE, 1972

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Australia		
							Males	Females	Persons
Enrolled in the first year of a course	5,457	(a)5,250	1,961	1,851	1,409	352	6,101	10,179	16,280
Enrolled in the final year of a course	4,075	(a)3,497	1,023	1,255	931	395	3,734	7,442	11,176

(a) Includes 217 and 183 males who are undertaking a two-year part-time course at the Technical Teachers College, for the first year, and the final year of a course, respectively.

*In-service training.* In-service training in Australia is directed chiefly towards keeping teachers abreast of developments and adding to their basic training. In-service training usually takes the form of short courses held sometimes during vacations, sometimes during school-time or in the evening. In some States in-service courses for teachers in remote areas are provided by correspondence and there are also in-service courses for special groups of teachers such as headmasters or teachers in one-teacher schools. In addition, district inspectors are responsible for organising short conferences of teachers, where professional topics are discussed. Education departments encourage teachers to pursue university courses and in some States pay the cost of courses undertaken by selected teachers.

*Status of teachers.* Most teachers in government schools are permanent public servants and have security of tenure, superannuation rights, and the right of appeal in matters of promotion. The centralised education systems and the general policy of providing fully trained teachers for both city and country areas means that teachers are subject to transfer to any part of the State in which they serve.

#### Training of technical teachers

To preserve links with industry and trade practice, schemes have been developed for the recruitment of specialist tradesmen as teachers and for their training in educational method and teaching techniques. In Victoria, the Technical Teachers College provides training for students with appropriate diploma or trade qualifications and suitable industrial experience. In New South Wales, technical college lectures and tradesmen-teachers receive an in-service course of teacher training in general education theory and training method, while correspondence courses and visiting lecturers assist the newly appointed tradesman-teacher in country colleges. Variations of this scheme are in operation in other States. Many technical teachers, principally of academic, commercial and domestic science subjects, hold trained teachers certificates from teachers colleges.

#### Training of non-government school teachers

Teachers for non-government schools receive their training in a number of ways. The Roman Catholic Church staffs both its primary and secondary schools, as far as possible, with members of religious orders. In recent years there has been an increase in the number of lay teachers being employed in Catholic schools, and training of students to become lay junior-secondary or primary teachers has been undertaken by Catholic teachers colleges.

Other non-government schools tend to recruit their staff from teachers who have already obtained qualifications in Australia or overseas. In New South Wales and Victoria, non-government school authorities offer courses designed specially for teachers in their schools. Non-government schools also recruit university graduates, who are then given professional guidance by senior members of the school staff. Private students may enrol at government teachers colleges on payment of a fee, but the number of places available is limited. The Commonwealth Government provides financial assistance to the States for approved building projects provided that the colleges admit a number of private students. Some teacher trainees who will eventually teach in non-government schools train in this way.

The following table shows, for non-government teachers colleges, the number of students enrolled, and the number in the final year of their courses.

**NON-GOVERNMENT TEACHERS COLLEGES: ENROLMENTS(a), AUSTRALIA, 1972**

	<i>Enrolments</i>			<i>Students in final year of a course</i>		
	<i>Males</i>	<i>Females</i>	<i>Persons</i>	<i>Males</i>	<i>Females</i>	<i>Persons</i>
For primary teaching . . .	241	1,526	1,767	70	364	434
For secondary teaching . . .	221	65	286	51	31	82
Not classifiable as primary or secondary teaching . . .	28	66	94	3	24	27
<b>Total . . . . .</b>	<b>490</b>	<b>1,657</b>	<b>2,147</b>	<b>124</b>	<b>419</b>	<b>543</b>

(a) These figures include students taking university degree courses whether instruction is given at the university or the college. They exclude students at kindergarten teachers colleges.

During vacations many non-government teachers attend in-service training courses organised by education departments. In recent years vacation courses have been provided by bodies other than education departments for teachers from both government and non-government schools. For example, an independent body, the Science Foundation for Physics within the University of Sydney, has provided such courses for teachers of science in secondary schools in New South Wales.

For details of Commonwealth financial assistance to teachers colleges *see* page 672.

#### **Pre-school teachers colleges**

With the exception of Tasmania, each State has a pre-school or kindergarten teacher/training college which provides a three-year diploma course for teachers of children in the 3-8 year age group. In Tasmania and the Australian Capital Territory, pre-school teacher training is provided by three-year courses at the Tasmanian College of Advanced Education and the Canberra College of Advanced Education, respectively.

In Victoria, the Melbourne Kindergarten Teachers College is an autonomous institution administered by an independent college council. In New South Wales, Queensland, South Australia and Western Australia the colleges have traditionally been the responsibility of the Kindergarten Union in each of those States; it is expected that in future the pre-school teachers colleges in at least some of these States will gain autonomy or become associated with other tertiary institutions.

In 1972 there were 1,216 students (all female) enrolled for diploma courses at kindergarten teachers colleges, of whom 301 were in their final year.

The Commonwealth Government has provided grants for building projects at pre-school teachers colleges; for details of this financial assistance *see* page 672. From July 1973 the Commonwealth Government will provide grants, under the advanced education legislation, for the capital development and running costs of pre-school teachers colleges.

### **Technical education**

Australian technical colleges offer training in all the major industrial skills and in a wide variety of commercial, artistic and domestic occupations. The main types of courses are described in Year Book No. 55, pages 498 and 499.

The following is an outline of the administration of, and some recent developments in, technical education in each State.

*New South Wales* has a separate State Department of Technical Education under the Minister for Education. A Technical Education Council advises the Minister, and there is also an advisory council or committee for each technical college, established on a local basis to assist the principal in determining the needs of his own area. These bodies include representatives from industry and commerce.

*Victoria.* The larger colleges are controlled by their own councils and are affiliated with the Victoria Institute of Colleges. These colleges are at present responsible to the Victoria Institute of Colleges for the development and operation of tertiary courses and to the Education Department for the conduct of non-tertiary courses.

Government-controlled colleges are administered by the Technical Education Division of the Education Department. In general, diploma awarding schools or sections of technical institutions are in the process of being separated from the trade, certificate and other sections of technical education, and are being developed as colleges of advanced education. They are now receiving Commonwealth assistance for this purpose.

*Queensland.* Technical colleges in Queensland are administered by a branch of the State Education Department. This branch also administers the Technical Correspondence School which provides instruction in many courses to students in remote areas. Those institutions offering diploma courses in technological fields are now colleges of advanced education, which function as autonomous institutions and receive Commonwealth financial assistance. At present, they also offer technical courses at the certificate level.

*South Australia.* Technical colleges are administered by the State Department of Further Education. For a number of years, the South Australian Institute of Technology has offered courses which lead to a level of qualification below that of full professional status. The courses provide for those employed in the area between the tradesman and the professionally qualified person.

*Western Australia.* Technical schools, colleges and education centres are administered by a division of the Western Australian Education Department and offer a wide range of technician and vocational courses related to commerce, industry, agriculture and the home. In addition, the Technical Educational Division offers study programs for students undertaking the examinations of other examining bodies, as well as general education and leisure-type activities. The Technical Extension Service of the Division offers a wide range of correspondence instruction.

*Tasmania.* Technical education is controlled by the Tasmanian Education Department through a Board of Technical Education whose chief administrative officer is the Director of the Technical Education Branch. There are technical colleges in five centres: Hobart, Launceston, Devonport, Burnie, and Queenstown. The Tasmanian College of Advanced Education is being developed and since January 1972 has taken over all diploma courses. Technical colleges will in future be concerned with apprenticeship/trade, post-trade and technical courses, and commercial and general courses at the certificate level.

The numbers of colleges, teachers and enrolments in each State and Territory during 1971, and for Australia for the period 1967 to 1971 are given in the following table. The statistics include senior technical schools and colleges, institutes of technology and colleges of advanced education providing technical education, and their teachers and students at all levels. Whilst details for colleges of advanced education are included, the basis of collection differs from that used for advanced level courses, statistics of which are given on pages 653-5.

TECHNICAL EDUCATION: COLLEGES, TEACHERS AND ENROLMENTS  
STATES AND TERRITORIES, 1971

	Colleges	Teachers			Students enrolled		
		Full-time	Part-time	Total	Males	Females	Persons
New South Wales(a)(b)(c)(d)	62	2,120	4,922	7,042	108,917	60,289	169,206
Victoria(e)	98	4,997	3,236	8,233	n.a.	n.a.	67,192
Queensland(d)	18	800	1,286	2,086	27,721	4,300	32,021

Western Australia(d)(f)(g)	87	1,099	2,009	3,108	43,472	26,924	70,396
Tasmania	7	189	565	754	5,972	1,905	7,877
Northern Territory	2	20	241	261	2,340	3,463	5,803
<b>Australia—1971</b>	<b>303</b>	<b>9,888</b>	<b>13,715</b>	<b>23,603</b>	<b>n.a.</b>	<b>n.a.</b>	<b>395,893</b>
1970	292	9,176	12,294	21,470	n.a.	n.a.	387,812
1969	296	8,826	11,615	20,441	n.a.	n.a.	398,578
1968	275	9,041	11,888	20,929	n.a.	n.a.	389,309
1967	230	8,071	11,290	19,361	n.a.	n.a.	376,915

(a) Students enrolled represent gross enrolments, no allowance having been made for students enrolled in more than one course. (b) Includes Australian Capital Territory. Gross enrolments at Canberra Technical College were 7,512 in 1971; 6,877 in 1970; 6,105 in 1969; 5,956 in 1968; and 5,578 in 1967. (c) Figures include teachers and students at 137 associated centres and 4 mobile units. (d) Includes correspondence course teachers and students. (e) Prior to 1969 statistics included tertiary students and teachers teaching tertiary courses at colleges affiliated with the Victoria Institute of Colleges, and the Emily McPherson College. Teachers include those at both senior and junior technical colleges. (f) Teachers represent number of teaching positions. (g) Country extension centres are now counted separately.

Commonwealth assistance to technical education is shown on page 671.

### **Agricultural and forestry education**

There are agricultural faculties in universities in all States. Ten of the faculties provide various degree courses in agricultural science and agricultural economics and there are also three faculties of veterinary science in New South Wales, Victoria and Queensland. Besides undergraduate courses, these faculties collectively provide a wide range of post-graduate diploma courses as well as facilities for training for higher degrees. A fourth veterinary science school in Western Australia will enrol its first students in 1975.

At least one government agricultural college in each State, except Tasmania, is a college of advanced education. The primary role of these colleges is to train students for professional extension work or technology roles in the agricultural services. An exception is Muresk in Western Australia which, like Marcus Oldham (an independent college in Victoria), places emphasis on farm management. The new Orange Agricultural College in New South Wales will also concentrate on farm management training.

At the sub-tertiary level, other colleges in New South Wales, Victoria and Queensland teach the principles and practices of agriculture and farm management to those intending to take up farming as a career. A similar scheme is proposed for Tasmania. There is also a wide range of technical training available.

Training in forestry at undergraduate and post-graduate levels, is provided by the Department of Forestry in the Faculty of Science within the Australian National University. A four-year degree course is offered, but the first year of this course may be undertaken, by arrangement, at any other university. The University of Melbourne provides a four-year degree course in forestry and at the Victorian School of Forestry, Creswick, a three-year diploma course can be taken.

### **Other education**

#### **Conservatoria of music, schools of art, etc.**

In addition to the conservatoria of music which are attached to universities or which constitute separate colleges of advanced education, there is the Canberra School of Music which offers a four-year full-time diploma course of theoretical and practical studies. Some schools of art have been developed into colleges of advanced education or included as departments in such colleges, and offer courses in printing, sculpture, and design as well as in basic art.

#### **Educational training in the defence services**

Each of the three armed forces maintains institutions for the training of officers. The Royal Australian Naval College, Jervis Bay, Australian Capital Territory, became an affiliated college of the University of New South Wales in 1968. Selected matriculated cadets complete first year degree studies in science, engineering or surveying at the College, and subsequent years of degree studies at the University. The Royal Military College, Duntroon, Australian Capital Territory, became an affiliated college of the University of New South Wales in 1968. The Royal Australian Air Force Academy, Point Cook, Victoria, has evolved from the Royal Australian Air Force College, which was established in 1948 as a tertiary training centre to provide a professional education for permanent officers of the Air Force. It is affiliated with the University of Melbourne and has adopted that University's Bachelor of Science course. The Academy is also permitted to present students for higher degrees in science and the degree of Doctor of Philosophy. Students may also proceed to the University of Sydney to take a degree in aeronautical engineering. The Australian Staff College and the Royal Australian Air Force Staff College provide one year courses for officers. Courses at the Australian Joint Services Staff College commenced in January 1970. The College provides higher training for selected Service officers, certain officers of the Commonwealth employed in Departments associated with defence matters and selected students from other countries. College courses cover political, defence and economic subjects and are of six months duration. Educational training is also provided in the apprentice training schools conducted by each of the Services, and in the Royal Australian Navy School for Junior Recruits. The Royal Australian Air Force School of Languages, Point Cook, Victoria, conducts courses in French and Asian languages. In 1972 there were 47 students enrolled, of whom 8 were Royal Australian Air Force personnel. For further information on Service training and educational facilities, *see* Chapter 4, Defence.

The following table shows the number of officers, officer cadets and other ranks enrolled in the training establishments mentioned above.

**SERVICE ESTABLISHMENTS PROVIDING EDUCATIONAL TRAINING  
AUSTRALIA, 1972**

<i>Establishment</i>	<i>Enrolments</i>	<i>New entrants during year</i>	<i>Number completing course during year</i>

(a) Includes 367 cadets enrolled for university courses and 132 enrolled at an institute of technology. (b) Excludes 132 R.A.A.F. Diploma Squadron cadets enrolled at colleges of advanced education. (c) Includes 115 apprentices enrolled at a technical college or institute of technology. (d) Non-commissioned officers engaged on part-time instructional duties and part-time study at teachers training college.

### **The Australian School of Pacific Administration**

The Australian School of Pacific Administration, which used to train students in the various aspects of service and administration in Commonwealth Territories including teaching, is now an important centre concentrating on administrative and specialised training to prepare Papua New Guinean public servants. For details of its new role, see Chapter 28, The Territories of Australia.

Because of a change in role, most of the existing training activities for both Papua New Guinea and the Northern Territory undertaken at the School of Pacific Administration are being phased out. In 1972, the School trained 53 Australians doing final year teacher training before commencing service in Papua New Guinea and the Northern Territory. The School also undertook training of Australians for service as patrol officers in Papua New Guinea and Aboriginal welfare officers in the Northern Territory.

### **Australian Administrative Staff College**

Opened in 1957, the Australian Administrative Staff College is a private organisation working in close co-operation with government and other public bodies, the armed services, and the trade union movement. It was founded, and is owned, by a large group of leading Australian companies and has its permanent premises at Mount Eliza, near Melbourne. The College conducts residential courses for administrators to further the study of the problems which arise in managerial work.

### **Technical training by government departments**

Although most needs of departments for trained staff are met by apprenticeship schemes and other technical college courses and by the universities, some departments provide training which is not available elsewhere. The most important field for which such training is provided is the training of telephone, telegraph, radio, and television technicians by the Postmaster-General's Department.

### Post-school study courses

As part of the quarterly population survey (*see* Chapter 20, Employment and Unemployment) a survey was conducted in all States and Territories in August 1968 to obtain estimates of persons enrolled for courses of study or training outside school. The results of the survey supplement data about enrolments collected from schools and other institutions, and present a general indication of post-school education. For details of the survey *see* Year Book No. 56, pages 640–44.

### Migrant education

The Department of Immigration is responsible for migrant education as part of its responsibility for migrant integration generally. Migrant education includes not only the teaching of English but also counselling and instruction to prepare migrants for life in their new environment and to assist them to integrate more quickly into the Australian community.

Following a major review of migrant education early in 1970, increasing emphasis has been placed upon accelerated and more specialised forms of instruction and on developing courses designed to meet the varying needs of individual groups of migrants. The program now includes full-time intensive courses for professional and other well-educated migrants, accelerated courses particularly suited to workers and migrant women, special courses for migrants in industry, daytime classes for migrant women and a special language program for migrant children in government and independent schools.

### The child migrant education program

The child migrant education program involves the Australian Government in reimbursing government and non-government school authorities for the costs of teaching English to migrant children. Expenditure on this program was \$5.1 million in 1972–73 and is estimated to be \$8.4 million in 1973–74. The Government will also be providing \$2 million in 1973–74 to meet the cost of supplementary classroom accommodation where this is necessary to allow special migrant instruction to take place.

Courses in English are arranged in conjunction with State education departments, colleges of advanced education and other approved educational bodies. Advice on aspects of teaching English, co-operation in the arrangement of teacher training courses and the production of suitable teaching and learning materials is provided by the Department of Education.

The Australian Government allocates funds to the Intergovernmental Committee for European Migration which, in Greece, Italy, Germany and Austria, provides pre-embarkation class and correspondence instruction for intending migrants to Australia. The Department itself arranges language and orientation courses in Turkey, France and Yugoslavia and distributes a recorded introductory English language course in Finland. The Governments of Holland, Belgium and Spain assist with courses conducted in these countries. Language instruction is given by Departmental Education Officers on ships carrying significant numbers of non-English speaking migrants to Australia.

A radio/correspondence course in English is conducted in Australia in co-operation with the ABC and in May 1971 an educational television program was commenced by arrangement with Station Channel WIN 4 Wollongong.

The *Immigration (Education) Act* 1971 was introduced to give legislative authority for the ongoing program. The Act came into force on 12 May 1971.

### Adult education

The term 'adult education' as used in Australia refers mainly to non-vocational educational and cultural activities for adults. While the nature of the recognised adult education authorities varies from State to State, their major activities have many common features. Regular courses of lectures are organised on such topics as literature, music, drama, international affairs, languages, and crafts. Some authorities also organise discussion groups, festivals and summer schools, and provide special services for groups in remote areas. In 1960 an Australian Association of Adult Education was formed, and its first annual conference was held in Adelaide in 1961. The Association handles matters pertaining to adult education at a national level and arranges liaison with similar bodies in other countries.

One of the first bodies active in the field of adult education in Australia was the Workers' Educational Association, which formed associations in all States in 1913. Its aims were to bring the universities into closer relationship with the community in general and to provide for higher education in civic and cultural subjects. These associations have been superseded by Adult Education Boards or Councils set up by the State governments in Victoria, Queensland and Tasmania, and by the university in Western Australia. In the other two States, New South Wales and South Australia, the associations continue to co-operate with the universities in their extension work and are given direct grants by the governments concerned.

There are throughout Australia various other organisations which are active in the field of adult education. The World Education Fellowship, for example (*see below*), since its inception in Australia, has been interested in adult education.

### Overseas students

Information about overseas students in Australia is available from three statistical series. The Department of Education compiles statistics of *government sponsored overseas students* in Australia. The statistics of government sponsored students in institutions of higher learning are compiled from records held by that Department; those of other government sponsored students are estimates from information held by the Department of Foreign Affairs. In June 1972, there were 1,785 government sponsored overseas students in institutions of higher learning, and 597 other government sponsored students. These figures exclude some personnel of overseas armed forces taking courses at Australian Defence Colleges. Altogether, there were 2,382 government sponsored overseas students in Australia in 1972. Students under the Colombo Plan Technical Co-operation Scheme numbered 1,687. The largest numbers of government sponsored students came from Malaysia, Indonesia, South Vietnam, and Thailand.

The Department of Immigration prepares statistics of overseas students in Australia who have been admitted under the *Private Overseas Student Programme*. In 1972, there were 9,995 students (6,611 males and 3,384 females) undertaking courses or training in Australia under the Programme; 5,571 from Malaysia, 1,117 from Hong Kong, and 775 from Singapore. Courses chosen were mainly in engineering and building (1,814), economics and commerce (1,408), medicine (including paramedical) and dentistry (1,832), and general and school courses (2,101).

*Overseas students enrolled for advanced level courses* in Australian education institutions are enumerated annually. The institutions reported 8,080 enrolments in 1972, 6,297 at universities, 1,537 at colleges of advanced education and 246 at other institutions.

## Organisations associated with education

### Australian Council for Educational Research

The Australian Council for Educational Research, a non-government body, is engaged on educational research in a wide variety of fields, ranging from tertiary to pre-school education. It conducts surveys and inquiries, makes grants to approved educational investigators, serves as a centre for disseminating educational information, provides training for research workers, and standardises and distributes educational and psychological tests for use in Australia. Although this Council is an autonomous body, the Commonwealth and State governments give substantial financial support.

### World Education Fellowship

The World Education Fellowship is a world organisation of parents, educators and other citizens interested in the development of new educational practices. It was founded in London in 1915 and spread to Australia at the time of a regional conference held here in 1937. There are now sections in each State. Its Australia-wide journal *New Horizons in Education* is published twice a year.

### Australian College of Education

The Australian College of Education was formed in 1959. Its aims are to bring together leading teachers and administrators in every field of education, to raise the standard of the profession of education in Australia, to establish and proclaim fundamental educational values, and to recognise outstanding contributions to educational practice. Chapters of the College have been set up in all States, and several of the addresses and papers delivered at meetings of the College have been issued in published form.

## Commonwealth activities in education

### Fields of activity

Although education is primarily the responsibility of the States, the Commonwealth has instituted a number of measures of direct assistance to educational institutions and to students. It is responsible for public education in its own Territories and is engaged in educational activities incidental to its responsibilities in such areas as defence, external relations, immigration, and social services. Education in Commonwealth Territories is outlined in Chapter 28, *The Territories of Australia*; various schools and colleges for the Defence Services are referred to on pages 661–2, and other activities which may be considered broadly as educational are referred to in the section on Broadcasting and Television in Chapter 12, *Transport, Communication and Travel*. Details of Commonwealth expenditure on education are provided on pages 674–81.

### Department of Education

The Commonwealth Department of Education (formerly the Department of Education and Science), is concerned with direct grants for educational purposes, e.g. for universities, colleges of advanced education, school libraries, technical schools, and science buildings, as well as with grants for building teachers and pre-school teachers education institutions. It administers per-capita grants to non-government (i.e. independent) schools for running costs and is involved in curriculum development projects. The Department is responsible for the various Commonwealth scholarship schemes and for special scholarships offered by overseas countries for Australians. Among the Department's other responsibilities are matters in the field of international relations in education, including UNESCO and Commonwealth Co-operation in Education, and liaison with State and other education bodies throughout Australia. The Department provides professional advice on education to other Commonwealth departments and authorities and develops courses and materials for migrant education. It administers educational services in the Australian Capital Territory, (including Jervis Bay) and the Northern Territory.

For detailed information on the Acts administered by the Commonwealth Department of Education see the Australian Government Directory, 1973.

### Advisory bodies

Various advisory bodies on educational matters have been established by the Australian Government:

Advisory Committee on Child Care Research, Australian Advisory Committee on Research and Development in Education, Australian Committee on Technical and Further Education, Australian Pre-Schools Committee, Australian Universities Commission, Child Care Standards Committee, General Committee on the Scheme of Commonwealth Co-operation in Education and the Interim Committee for the Australian Schools Commission.

### Scholarship Schemes

*Commonwealth scholarships.* The Commonwealth Government provides financial assistance to students through several major scholarship schemes. A total of 48,800 new awards were made available in 1973 under these schemes.

Under the *Commonwealth Post-graduate Research Awards Scheme*, 700 new awards were made available in 1973 for students undertaking research leading to higher degrees at Australian universities. The awards are for full-time study and may be renewed annually up to a maximum period of four years. In 1973, 100 awards were made available under the scheme of Commonwealth Post-graduate Course Awards for full-time students taking Masters degrees by course work. Both groups of awards carry a stipend of \$2,900 per annum and certain other allowances.

The *Commonwealth University Scholarship Scheme* made provision for 14,500 scholarships in 1973. Of these, 9,500 are open entrance scholarships which are allocated amongst the States in proportion to population and are awarded on the basis of results achieved in Australian matriculation examinations. The remaining 5,000 scholarships are Later Year Awards for students who have already completed one or more years of a university course. A small quota of awards from each group is set aside as Mature Age Scholarships for students who have reached the age of thirty years. Scholarship holders have their fees paid and may receive a living allowance subject to a means test. The maximum rates of living allowances are \$1,300 per annum in the case of scholars living away from their parents and \$800 for scholars living with parents.

The *Commonwealth Advanced Education Scholarships Scheme* made provision for 6,000 scholarships in 1973 for students taking approved courses of advanced education at institutions other than universities. Benefits are similar to those for university scholarships.

The above schemes are the main responsibility of the *Commonwealth Scholarships Board* which is responsible for advising the Government on the policy and administration of Commonwealth post-graduate awards and university and advanced education scholarships. The Board, under its former title of the Universities Commission, was established by the *Education Act* 1945. It consists of a chairman and three other members.

From 1964 to 1972 the *Commonwealth Secondary Scholarship Scheme* students competed each year for 10,000 scholarships which assisted them during the final two years at secondary school. Benefits were free of means test and comprised a yearly living allowance of \$200, a textbook and equipment allowance of \$50 per annum and reimbursement of compulsory fees up to a maximum of \$150 per annum. From the beginning of 1973 this scheme is being phased out and replaced by the Commonwealth Senior Secondary Scholarship Scheme which provides 25,000 scholarships to assist students during the final two years at secondary school. Under these scholarships the successful applicant receives a basic allowance of \$150 per annum without a means test. A further allowance of up to \$250 per annum may be paid subject to family income.

The *Commonwealth Technical Scholarship Scheme* made available 2,500 new awards in 1973 to assist students to take approved technical courses. Most of these courses are at certificate level in technical colleges. Full-time technical scholarship holders receive, free of means test, a yearly living allowance of \$200, a text-book and equipment allowance of \$50 per annum and reimbursement of compulsory fees up to a maximum of \$150 per annum. The benefits paid each year to part-time technical scholars are an allowance of \$100, free of means test, and reimbursement of compulsory fees up to a maximum of \$100.

*Changes planned for 1974.* In 1974, as part of new arrangements for financing tertiary education, which will remove the need for students to pay compulsory tuition fees and associated charges, the Commonwealth University, Advanced Education and Technical Scholarship Schemes will be replaced by a new Tertiary Allowances Scheme. This scheme will be non-competitive and will provide means tested allowances for all eligible full-time students who do not hold other awards.

(a) Includes the Australian Capital Territory.

(b) Includes the Northern Territory.

*Australian Agricultural Council Scholarships.* At the request of the Australian Agricultural Council the Department of Primary Industry makes available from the Commonwealth Extension Services Grant funds 12 scholarships annually (two in each State) to students in Australia who have qualified for a Commonwealth University Scholarship and who wish to proceed to an approved course of study leading to a degree in Agricultural Science, Agricultural Engineering, Agricultural Economics, Rural Science or Veterinary Science. The purpose of the awards is to foster interest in agriculture and related fields of study.

As at 30 June 1972, there were 55 students holding Agricultural Council Scholarships in Australia.

*Aboriginal Study Grants.* Awards under the Aboriginal Study Grants Scheme have been made since 1969 to assist Aborigines to take courses of study after leaving school. They provide full-time students with fees, a living allowance of \$1,300 per annum and other allowances; and the part-time students with fees and incidental expenses. In 1972, 689 students held grants.

*Aboriginal Secondary Grants.* This scheme was introduced to assist students to continue schooling beyond the school leaving age by paying living costs, fees and other allowances. At 30 June 1972, 4,266 students held grants. In 1973, the lower age limit of 14 years was removed and assistance was extended to all Aboriginal pupils enrolled at secondary school.

*Canberra Teacher Education Scholarships.* These awards were offered for the first time in 1971 and assist students undertaking courses of teacher training at the Canberra College of Advanced Education. The Scholarships are unbonded and benefits are similar to those for Advanced Education Scholarships. At 30 June 1972, there were 70 students holding awards.

*Pre-school Teacher Education Scholarships.* This scheme was introduced in 1973 to assist all students enrolled in pre-school teacher education courses. Benefits are free of a means test and comprise a living allowance of \$800 per annum for students living at home and \$1,300 per annum to students living away from home, and payment of all compulsory fees.

*Commonwealth Teaching Service Scholarships.* These scholarships were first introduced in 1972 to assist students taking courses of teacher training who, on completion of that training, would become members of the Commonwealth Teaching Service. There were 400 awards available in 1973. They are unbonded and entitle holders to payment of all compulsory fees and to a living allowance, which is not subject to a means test, at the rate of \$800 per annum for a scholar living at home and \$1,300 per annum for a scholar living away from home. At 30 June 1973 there were 366 scholars in training.

### International relations

An account of the relations and exchanges in the field of education before 1969 between Australia and other countries can be found in Year Book No. 55, pages 526–527.

The Department of Education is responsible for the administration of various schemes concerned with international co-operation in education.

An important UNESCO activity for 1972 was the holding of the Seventeenth Session of the UNESCO General Conference in Paris in October–November. An Australian delegation contributed to the discussions, which were concerned with the determination of the Organisation's future program activities and the adoption of the budget for the 1973–74 biennium. Members of the delegation included, for the first time, two representatives of Papua New Guinea's interests.

The six Australian specialist UNESCO Committees concentrated attention during 1972 on future UNESCO international program activities, and briefed the delegation to the Conference accordingly.

During 1972, there were several local UNESCO activities of significance. Three national seminars were held. In May, a Seminar on the Teaching of English took place, which examined present English curricula in Australian schools. This Seminar was organised by the Committee for Education. In November, the Committee for Communication, as part of its contribution to UNESCO International Book Year, organised a national seminar entitled "The Book under Challenge" which dealt with the role of books in contemporary society. In December, a regional Seminar on Drought was held. This meeting, organised by the Australia–UNESCO Committee for the International Hydrological Decade, examined techniques of managing water and associated land resources. The seminar was planned as a contribution to Asian regional co-operation in hydrology.

Overseas consultants were made available by the Director-General of UNESCO for the Teaching of English and Drought seminars. A further UNESCO consultant visited Australia, at the request of the Committee for Museums and Libraries, to advise authorities on the restoration and preservation of nineteenth century buildings.

Under the scheme of Commonwealth Co-operation in Education (CCE), the Department of Education arranged short study programs in Australia for a group of senior educationists from Africa and the Pacific and recruited a number of Australian educationists to undertake developmental assignments in developing countries of the Commonwealth.

As part of Australia's contribution to the Commonwealth program, special training courses for teachers from Commonwealth countries were arranged in 1972 by the Department of Education. A group of Ugandan infant teachers completed a two-year course in infant teaching methods at Wollongong Teachers College conducted by the New South Wales Department of Education; a one-year course in Infant Education was also conducted at Wollongong Teachers College and was attended by teachers from Fiji, Gambia, Tonga and Western Samoa. Teachers from the Gilbert and Ellice Islands, Guyana, Jamaica, Kenya, New Hebrides, Nigeria, Tanzania, Tonga, Western Samoa and Zambia participated in a one-year course in Primary Education held at the Murray Park College of Advanced Education (formerly Wattle Park Teachers College) conducted by the South Australian Education Department. The Victorian Education Department arranged a course for Inspectors of Schools, following which the participants (from Mauritius, Nigeria, Tanzania, Uganda and Zambia) attended the biennial Conference of the Australasian Association of Institutions of Inspectors of Schools, held in Hobart. A mathematics workshop was again conducted by Macquarie University.

In a new type of program introduced in 1972, eight teachers from the British Solomon Islands undertook a four-months course of attachments to small rural primary schools in New South Wales to observe methods and content of teaching in relation to rural conditions. Other programs followed by overseas educationists under the scheme of Commonwealth Co-operation in Education included

the Master of Education degree, the Diploma in the Teaching of English as a Foreign Language, primary school arts and crafts, pre-school education, educational administration, domestic science, physical education, and industrial arts.

Under the Commonwealth Scholarship and Fellowship Plan, the Department of Education is responsible for the award of Australian scholarships to students from other Commonwealth countries. In 1972, Australian awards were taken up by scholars from Britain, Canada, Cyprus, Fiji, Hong Kong, Malawi, Malaysia, New Hebrides, New Zealand, Nigeria, Singapore, Sri Lanka, Tonga, Trinidad, Uganda, Western Samoa and Zambia. The Department of Education acts as the selection agency for post-graduate scholarships offered to Australian students by other governments. Offers are received from many Commonwealth and European countries, and Japan. The offers by Commonwealth countries are made under the Commonwealth Scholarship and Fellowship Plan. In the case of the United Kingdom and Canada, the awards provide the largest single opportunities for Australian students to undertake post-graduate studies in those countries. The Department also continued to be responsible for the administrative procedures in connection with selection for the various types of travel grants offered by the Australian-American Educational Foundation to Australian scholars and educationists for study in the United States of America.

During the long school vacation at the end of 1972, the first group of 24 Australian teachers to be awarded Asian Travel Grants by the Australian Government visited Asian countries. The Department of Education was responsible for the selection. It also administers the program of ANZAC Fellowships which are designed to enable distinguished New Zealanders to pursue their professional interests in Australia. Two awards were made in 1972. New Zealand makes reciprocal offers to Australia, and the Department is involved in selection. The Department is also involved in the administration of scholarships offered by the Confederation of British Industry, which each year enable a small number of young Australian engineers to undertake practical training in Britain and the Australian Government contributes to the costs of this scheme.

Australia became a member of the Organisation for Economic Co-operation and Development (OECD) in June 1971 (for details see Chapter 6, International Relations) and has participated in the Organisation's activities in education. Australia has become an official member of the OECD Centre for Educational Research and Innovation and has participated in Sessions held in Paris. In association with the Department of Foreign Affairs, the Department of Education liaises with State education departments and other relevant bodies on educational matters arising from Australia's membership of OECD.

#### **Commonwealth grants for education purposes**

*Grants for research purposes.* The Second Report of the Australian Universities Commission recommended that during the calendar years 1964, 1965 and 1966 a total of \$10 million should be provided for universities to support research activities at the post-graduate level, half the sum to be provided by the Commonwealth and half by the States. The Australian Research Grants Committee, which is entrusted with the task of advising on the allocation for particular research projects, was established in April-May 1965. Its immediate function was to advise the Commonwealth on the distribution of the \$4 million for the year 1966.

At the beginning of 1967 it was decided that the Committee would continue to function through the 1967-1969 triennium, and was asked to recommend to the Commonwealth Government the distribution of \$9.2 million for the triennium to be provided solely by the Commonwealth. Details of the distribution of this money may be obtained from the *Australian Research Grants Committee, Report 1967-69*. An amount of \$12.5 million (later increased to \$13.1 million to cover rises in academic salaries) was allocated by the Australian Government for the 1970-72 triennium and details of its distribution can be obtained from the Report for the above-mentioned period, published in mid-1972. An amount of \$20 million has been allocated for the scheme during the 1973-75 triennium. Of this amount \$17 million is for upper atmosphere research, \$0.9 million for research in marine science, \$0.65 million for multidisciplinary research and \$0.55 million for the purpose and operation of a high resolution nuclear magnetic resonance spectro-meter. For details of Australian Government expenditure under the scheme in 1971-72 see page 677.

*Grants for universities.* The Australian Universities Commission, a statutory body established under the *Australian Universities Commission Act, 1959-1971*, advises the Minister for Education on matters in connection with the grant of Commonwealth financial assistance for universities in the States and the Australian Capital Territory. To date, the Commission has presented five triennial reports. The total financial support for universities provided by Commonwealth and State governments on the Commission's recommendations for the years 1961 to 1975 has exceeded \$2,900 million, including fees. Since the Australian universities are almost wholly dependent on government finance, the Australian Universities Commission plays a key role in the determination of the growth and balanced development of the Australian university system.

Prior to the establishment of the Commission, there were nine universities—the Universities of Sydney, New South Wales, New England, Melbourne, Queensland, Adelaide, Western Australia, Tasmania and the Australian National University. Since 1958, an additional six universities have been established on the recommendations of the Commission. These universities are the University of Newcastle and Macquarie University in New South Wales, Monash and La Trobe Universities in Victoria, James Cook University of North Queensland and Flinders University of South Australia. In the 1973–75 triennium two new universities, Griffith University in Brisbane and Murdoch University in Perth, will commence to take students and, in 1975, the Wollongong University College will become an autonomous university.

The Fifth Report of the Australian Universities Commission was published in 1972 and recommended total grants from Commonwealth and State sources for State universities of over \$893 million for the 1973–75 triennium. It also recommended grants of over \$122 million for the Australian National University. These recommendations were accepted by the Commonwealth Government which passed legislation to provide financial assistance for State universities in the 1973–75 triennium on the basis of the program recommended by the Commission.

A summary of the maximum grants by the Commonwealth for all universities for the 1973–75 triennium and for the 1967–69 and 1970–72 triennia is shown in the following table. Details of Commonwealth payments for universities are given on pages 675–7 and an historical summary of the financial assistance provided for universities by the Commonwealth Government is given in Year Book No. 55, pages 515–18.

ALL UNIVERSITIES: SUMMARY OF MAXIMUM COMMONWEALTH GRANTS FOR  
THE 1967-69, 1970-72 AND 1973-75 TRIENNA  
(\$'000)

Type of Grant	1967-69	1970-72	1973-75
Recurrent grants—			
General . . . . .	178,797	267,934	362,295
Teaching hospitals . . . . .	810	1,036	1,354
Student residences . . . . .	1,950	2,588	4,215
<i>Total recurrent grants</i> . . . . .	<i>181,557</i>	<i>271,558</i>	<i>367,864</i>
Building grants—			
Building projects . . . . .	50,683	59,276	65,301
Teaching hospitals . . . . .	4,927	2,460	2,990
Student residences . . . . .	11,524	12,117	3,904
<i>Total building grants</i> . . . . .	<i>67,134</i>	<i>73,853</i>	<i>72,195</i>
Equipment . . . . .	985	2,047	22,720
Research . . . . .	..	4,000	3,000
<i>Total Commonwealth grants for all universities (a)</i> . . . . .	<i>249,676</i>	<i>351,458</i>	<i>465,779</i>
<i>Total State grants for State universities(b)</i> . . . . .	<i>278,980</i>	<i>401,625</i>	<i>550,085</i>
<b>Total</b> . . . . .	<b>528,656</b>	<b>753,083</b>	<b>1,015,864</b>

(a) Including receipts from fees of the Australian National University.

(b) Including receipts from fees of State universities.

The Commonwealth makes the above grants available to the States on the following bases.

#### Grant

Recurrent grants for general university purposes and for teaching hospitals.

Recurrent grants for halls of residence and affiliated residential colleges.

Grants for equipment, for special research and for all buildings other than affiliated residential colleges.

Grants for buildings for affiliated residential colleges.

#### Basis

The Commonwealth Government provides \$1 for each \$1.85 available from State grants and students' fees.

Wholly supported by the Commonwealth Government.

The Commonwealth Government provides \$1 for each \$1 provided in State grants.

The Commonwealth Government provides one half of the approved project cost, the remainder being provided by the State government and the residential college on various bases.

The Commonwealth makes the above grants available to the States on the following bases.

<i>Grant</i>	<i>Basis</i>
Capital . . . . .	\$1 Commonwealth for every \$1 State
Recurrent . . . . .	\$1 Commonwealth for every \$1.85 of income from fees and State grants
Unmatched library . . . . .	No matching grant required
Matched library . . . . .	\$1 Commonwealth for every \$1 State
Research . . . . .	No matching grant required
Capital—Student residences (non-collegiate) . . . . .	\$1 Commonwealth for every \$1 State (up to a maximum of \$2,500 for each student place)
Capital—Student residences (country) . . . . .	\$1 Commonwealth for every \$1 State
Recurrent—Student residences . . . . .	Basic grant <i>plus</i> full-time student per capita contribution of \$60 per annum

(a) Grants less fees received. (b) State details of expenditure on this item are not yet separately available.

*Grants for technical training.* These grants are made under the *States Grants (Technical Training) Acts* 1964, 1965, 1968 and 1971–73. The grants are for capital expenditure on buildings and equipment for use in technical training. 'Technical training', for the purposes of this program, means the training of persons for engagement in trades, technical occupations and agricultural or other rural occupations below the tertiary level. From the time the scheme began in July 1964 to June 1971 the following amounts were advanced to the States, the allocation being based on total population.

**TECHNICAL TRAINING: COMMONWEALTH GRANTS TO THE STATES**  
**FOR THE PERIOD JULY 1964 TO JUNE 1971**  
(\$'000)

N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	All States
26,103	19,765	10,163	6,601	5,055	2,313	70,000

The scheme was extended for a further three years ending 30 June 1974. The 1971 Act provided a total of \$36 million. In addition, amending legislation has been passed which increased this amount by \$10 million to \$46 million. Maximum grants to the States for the triennium ending 30 June 1974 are shown in the following table.

**TECHNICAL TRAINING: MAXIMUM COMMONWEALTH GRANTS**  
**FOR THE TRIENNium ENDING 30 JUNE 1974**  
(\$'000)

N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	All States
16,988	12,820	6,721	4,323	3,699	1,449	46,000

For Commonwealth outlay on technical training during 1970–71, see pages 675–7.

The Australian Government has established an Australian Committee on Technical and Further Education which will become a Commission after the passage of enabling legislation. The Committee will advise on the development of technical and further education after June 1974 and will recommend financial assistance to the States on the basis of needs and priorities.

*Grants for teachers colleges.* The scheme commenced on 1 July 1967, and was extended for a further three years with available funds increasing from \$24 million for the 1967–70 triennium to \$30 million for the 1970–73 triennium. The grants to teachers colleges are for capital expenditure on approved building projects including the planning, erection, alteration and extension of a building plus the necessary furniture and equipment. The *States Grants (Teachers Colleges) Acts* 1967 and 1970 provide that 10 per cent of places (new or replacement) resulting from the expenditure of

Commonwealth grants must be available for private students, i.e. students not bonded, to State education departments. (For full details of the Commonwealth's role in teacher education, reference should be made to the report issued in 1972 of the Senate Standing Committee on Education, Science and the Arts.)

**TEACHERS COLLEGES: ALLOCATIONS OF COMMONWEALTH GRANTS  
FOR SIX YEARS ENDING 30 JUNE 1973**  
(£'000)

<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>All States</i>
17,400	14,850	6,780	6,800	5,600	2,570	54,000

It is estimated that the expenditure of Commonwealth grants on teachers colleges provided 5,677 places (4,371 new and 1,306 replacement places) during the period 1967-68 to 1969-70 and it will provide 6,000 places (3,520 new and 2,480 replacement places) during the period 1970-71 to 1972-73.

For details of Commonwealth grants for teachers colleges during the period 1967-68 to 1971-72 see page 676.

The Commonwealth also decided to support the introduction of teacher education into the colleges of advanced education and to provide funds for this purpose under the normal sharing arrangements for expenditure on colleges of advanced education in the States. During the triennium ending 30 June 1974, teacher training will be supported at the following colleges of advanced education: the Mitchell (Bathurst) and Riverina (Wagga) Colleges of Advanced Education in New South Wales; the Queensland Institute of Technology, Darling Downs (Toowoomba) and Capricornia (Rockhampton), and the Launceston and Hobart branches of the Tasmanian College of Advanced Education. Teacher education commenced at the Canberra College of Advanced Education in 1971.

*Pre-school teachers colleges grants.* In 1968 the Commonwealth provided \$2,500,000 for capital expenditure on approved building projects in connection with the provision of pre-school or kindergarten teacher training facilities. An approved building project includes planning, erection, alteration of a building plus the necessary furniture and equipment. The primary purpose of the grants was to double the capacity of the colleges for the training of pre-school teachers.

In Tasmania, pre-school teacher training is a function of the Tasmanian College of Advanced Education. In the other States it is currently administered by the private organisations shown in the table below. The Commonwealth's allocations made under the *States Grants (Pre-school Teachers Colleges) Act* 1968-1972, were as follows.

**PRE-SCHOOL TEACHERS COLLEGES: AMOUNTS GRANTED TO EACH STATE  
ORGANISATION RESPONSIBLE—1968-1973**  
(£)

<i>State</i>	<i>Name of college</i>	<i>Body of trustees conducting or owning property of college</i>	<i>Amount(a)</i>
New South Wales	Nursery School Teachers College	The Sydney Day Nursery and Nursery Schools Association Incorporated	650,000
	Sydney Kindergarten Teachers College	The Kindergarten Union of New South Wales, Incorporated	225,000
Victoria	Melbourne Kindergarten Teachers College	The Trustees of the Melbourne Kindergarten Teachers College	210,000
Queensland	Brisbane Kindergarten Teachers College	The Creche and Kindergarten Association of Queensland	350,000
South Australia	The Kindergarten Teachers College	The Kindergarten Union of South Australia, Incorporated	670,000
Western Australia	Meerilinga Kindergarten Teachers College	Kindergarten Association of Western Australia, Incorporated	175,000
Tasmania	Launceston Teachers College(b)		220,000
<b>Total</b>			<b>2,500,000</b>

(a) To be expended by 31 December 1973.

(b) Now part of the Tasmanian College of Advanced Education.

When the approved building projects are completed the number of places available at pre-school teacher training colleges will be 1,750, an increase of 1,024 places since 1967.

*Per capita grants to independent (i.e. non-government) schools.*

The *States Grants (Independent Schools) Act 1969* provided for the introduction in 1970 of special purpose grants to be made to the States for transmission to independent schools (non-government) as a per capita contribution from the Commonwealth towards their recurrent expenditure. The Act also provided for the payment of per capita grants for students attending non-government special schools for handicapped children. The *States Grants (Schools) Act 1972* provided that per capita payments would be on the basis of 20 per cent of the cost of educating a primary and secondary student respectively in government schools on an Australia-wide basis. States were invited to make matching payments in the future. See also *Report of the Interim Committee for the Australian Schools Commission*.

The per capita grants per student during 1970, 1971, 1972 and 1973 are as follows.

**RATES OF PER CAPITA GRANTS PAID TO  
INDEPENDENT (NON-GOVERNMENT) SCHOOLS  
DURING 1970 TO 1973  
(\$)**

Type of student	1970	1971	1972	1973
Primary . . .	35	35	50	62
Secondary . . .	50	50	68	104

*Australian Capital Territory and Northern Territory.* The Commonwealth Government provides a per capita grant to non-government schools in the Australian Capital Territory and the Northern Territory at twice the rate it pays to non-government schools in the States in its role as a 'State' Government.

Non-government schools in the Australian Capital Territory and the Northern Territory also receive grants for science facilities and for school libraries in conjunction with the capital aid scheme under which the Commonwealth Government meets the greater part of interest charges on loans and also repays, in 20 equal annual instalments, the approved costs for school building projects. For details of payments made under the Act during 1971-72, see page 678.

For the total amounts of per capita grants paid to independent (non-government) schools, see page 676.

*Grants for science laboratories.* From July 1964 to June 1975, \$123.3 million will have been distributed to the States in unmatched grants for science buildings and equipment in government and non-government secondary schools. During the present four year period which ends on 30 June 1975, grants to State schools have been provided on the basis of proposed programs agreed to between the Commonwealth and State Ministers of Education. Grants to independent schools have been approved by the Commonwealth Minister for Education in accordance with their entitlement to assistance and on the basis of reports by an Advisory Committee on Standards for Science Facilities in Independent Schools; State advisory committees representing independent schools allocate priorities within their own State.

*Grants for library facilities in secondary schools.* During the three-year period January 1969 to December 1971, the Commonwealth distributed \$27 million for the development of library facilities (erection, alteration or extension of library buildings and provision of furniture, equipment, books and library materials) in government and non-government secondary schools in the States. A further \$30 million has been provided for the same purposes in the 1972-74 triennium. Besides the Secondary Schools Libraries Committee, the Commonwealth, as with the science facilities scheme, has the advice of two advisory committees in each State, one representative of Roman Catholic secondary schools and the other representative of other non-government secondary schools. The maximum amounts available to the States during the present triennium are shown below. For details of payments made under the Act during 1971-72, see page 676.

**SECONDARY SCHOOL LIBRARIES: MAXIMUM COMMONWEALTH  
GRANTS FOR THE TRIENNIUM ENDING 31 DECEMBER 1974  
(\$'000)**

N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	All States
10,897	9,292	4,015	2,691	2,048	1,056	30,000

Following the Commonwealth contribution, in 1968-69, towards meeting the urgent need for more trained librarians to staff the new and existing libraries, further funds were made available during the period 1969-70, 1971-72 and 1972-73. These funds enabled the Commonwealth to sponsor several short specialist courses in various aspects of school librarianship in conjunction with State education departments and other interested organisations. During 1972 almost 2,000 teachers attended courses and seminars dealing with methods of library use, library organisation, selection of materials and the use of educational media. Expenditure in connection with the courses during the period 1968-69 to 1972-73 totalled approximately \$199,000.

*Capital Aid for Schools Program.* Under the *States Grants (Schools) Act 1972*, \$215 million is available for school construction by way of grants. Of this amount \$167 million is for State government schools and \$48 million for non-government schools. After 30 June 1974, the balance of the funds available under the Act will be distributed as far as non-government schools are concerned, on the basis of recommendations from the Australian Schools Commission. A total of \$9 million is being distributed to non-government schools in the six States in 1973-74.

*Interim Committee for the Australian Schools Commission.* The first grants to the States, for government and non-government schools, arising out of the accepted recommendations of the Interim Committee for the Australian Schools Commission will be paid as from the beginning of 1974. These grants will total approximately \$97 million for the six month period January to June 1974. Recurrent grants will not be available to those non-government schools which are considered to have attained or exceeded already the Interim Committee's target standard of 'recurrent resource use' i.e., the standard which all schools should desirably have reached by 1979.

As a result of the Interim Committee's recommendations, assistance will include grants to government and non-government schools for general running expenses, for the provision of new buildings, for the upgrading of existing buildings, for primary and secondary libraries, 'disadvantaged' schools, handicapped children, teacher development, special projects and information systems.

### Expenditure on education

The statistics in this section are intended to give a broad indication of the extent and direction of both government and private effort in the field of education in recent years. They have been compiled in accordance with national accounting concepts and, apart from some minor revisions which have been incorporated where later information became available, are consistent with the estimates included in *Australian National Accounts, 1971-72* (7.1). These figures can therefore be related to other national accounts aggregates. For explanation of the relevant national accounting concepts, reference should be made to *Australian National Accounts, 1971-72* and also to *Public Authority Finance: Commonwealth Authorities, 1971-72* (5.12), and *Public Authority Finance: States and Local Authorities, 1971-72* (No. 5.43), from which figures included in this section have also been taken.

The emphasis given in this section to the outlays of the public sector in part reflects the relative importance of that sector in the provision of education services, but is also a reflection of lack of detailed information relating to educational activities in the private sector. Sufficient information is given, however, to show the order of magnitude of private sector spending, and also to show aggregate demand for education services and facilities.

#### Public authority sector

The figures which follow form part of a comprehensive statistical program to reclassify the transactions recorded in the 'conventional' accounts of all public authorities into a national accounting presentation. As part of this program, the outlay of public authorities is classified by *function*, so as to reveal the broad purposes for which the public authorities undertake expenditure programs. These figures relate to those outlays which have been identified as being primarily designed to serve the purposes of 'education', broadly as defined in the United Nations System of National Accounts. Included therefore are outlays on administration and regulation of school systems and institutions of higher learning and educational research; on provision, inspection and support of primary and secondary schools, colleges and universities, technical training institutions, schools for the handicapped, adult education facilities, pre-school centres, etc.; on scholarships, research grants, etc.; and on subsidiary services such as transportation of school children and fare concessions. Expenditures on school medical and dental services and provision of free milk for school-children are not included, as these are regarded as primarily serving the purpose of health.

Application of this, or any other, definition of 'education' is far from being a straightforward matter. A particular item of expenditure may serve two or more distinct functions, and there is likely to be a degree of arbitrariness in deciding which is the primary function—the items referred to at the end of the previous paragraph are illustrative of this problem. In other cases a recorded

expenditure figure may relate to more than one function, but it may be very difficult in practice to separate them. Military colleges serve both defence and education functions. The usual practice is to classify these organisations to defence: but this practice may be of doubtful validity in the case of military colleges which are affiliated with universities. There are similar problems with the education of nurses. An initial difficulty here is that of satisfactorily identifying these expenditures in the accounts of hospitals. But even if that problem could be overcome there would still be some question as to whether this expenditure should belong in education or health. The lack of separate data decides the issue for the present—expenditure on the education of nurses in hospitals is classified to health—but the development of tertiary level courses in nursing at colleges of advanced education must eventually lead to reconsideration of this approach. There is also a problem in allocating these expenditures between the public and private sectors. Similar difficulties exist with post-graduate medical education. Another class of borderline cases relates to in-service training schemes. Here the usual practice is to classify expenditures to the primary function of the organisation providing the training: therefore all expenditures on cadetship schemes are treated in this way. Allowances paid to trainee teachers are regarded as in-service training expenditures—but in this case the primary function of their employers happens to be education, so that these expenditures are included in the figures in this statement. Expenditure on research by universities cannot be clearly separated from expenditures related to teaching; all expenditure by universities is therefore classified to education.

Apart from giving emphasis to the broad purposes of public sector outlays, a national accounting presentation of the transactions of public authorities is also designed to facilitate the study of their impact on the rest of the economy. In the following tables the outlays of the public authorities engaged in providing education services or financing their provision by other bodies, public or private, have accordingly been broken into broad categories of final expenditure on goods and services (i.e. final consumption expenditure, and expenditure on new fixed assets); capital financing items (e.g. net expenditure on existing assets); transfers to the private sector (cash benefits, grants for private capital expenditure) which become a source of finance for that sector's own final expenditures; and transfers between public authorities (Commonwealth grants to the States).

Detailed analyses have not been prepared of the accounts of all public authorities providing or financing education services but methods of analysis have been adopted which reflect the net effect of the transactions of authorities not fully analysed (such as the State universities). Private non-profit organisations are covered by recording their final consumption expenditure as final expenditure by public authorities and persons: that is, the current grants to these organisations by public authorities are treated as public authorities' final expenditure, and fees, donations, etc. paid to them by persons are included in private final consumption expenditure. Current outlay of non-profit organisations is therefore covered, being approximately equal to their income from grants and fees. For reasons of practicality, grants for capital expenditure by public authorities to private non-profit organisations are treated as transfers, so that the capital expenditure of these organisations is wholly recorded in the private sector.

Local authorities have no responsibility for the provision of education services and only participate in this field of activity to the extent of providing some support to pre-school centres in some States. These expenditures have been included in the figures for the public sector given in the last table in this section, but their impact is negligible. To all intents and purposes therefore the outlays of Commonwealth authorities and State authorities shown in the following tables may be taken together as constituting the outlay on education by all public authorities.

#### **Commonwealth authorities**

Details of outlay on education by Commonwealth authorities are given in the following table

**COMMONWEALTH AUTHORITIES: OUTLAY ON EDUCATION, 1967-68 TO 1971-72**

(a) For further details of outlay in the Territories, see p. 678.  
C.S.I.R.O. research studentships, scholarships and allowances to students in the N.T., and Australian Agricultural Council scholarships.

(b) Includes the following items: Forestry scholarships, Commonwealth Educational Co-operation Scheme.

(c) Relates mainly to expenditure in connection with

As may be seen from the table, Commonwealth outlays are directed very largely towards the financing of outlays on education by the States and the private sector. Direct expenditure by the Commonwealth relates mainly to the costs of administering its support programs and its own educational research activities, the provision of education services in the internal territories, expenditures of statutory bodies (i.e. the Australian National University, the Canberra College of Advanced Education, and the Australian Broadcasting Commission), expenditure on the education of Aborigines by the Northern Territory administration, and the costs of the child migrant education program.

#### Grants to the States

Financial assistance to the States specifically for education purposes constitutes the major item of outlay on education by the Commonwealth. The allocation of the various categories of grants to individual States in 1971-72 is shown in the following table. The grants themselves have been described earlier, *see* pages 668-74.

**Outlay on education in the internal territories**

As mentioned previously, the Commonwealth Government is responsible for the provision of education services in the Australian Capital Territory and the Northern Territory. Details of Commonwealth outlay on education in the Territories are given below; further information may be found in Chapter 28, The Territories of Australia.

**All public authorities**

The outlay on education of all public authorities consists of the final expenditure on goods and services of the Commonwealth and State authorities and transfers by these authorities to the private sector. These figures are brought together in the following table, and are related to the total outlay (on all functions) by all public authorities to give an indication of the share of government resources devoted to education.

<b>Outlay on education as percent of total outlay . . . . .</b>	<b>11.0</b>	<b>11.7</b>	<b>12.2</b>	<b>13.5</b>	<b>14.2</b>

**Total expenditure on education**

Total outlay on education can be measured by adding to the outlay of the public sector (as shown in the previous table) the final expenditure on education which the private sector finances from its own resources, or alternatively by adding together the final expenditures of both sectors (i.e. by consolidating out the public authority transfers, and also any net transactions in existing assets).

Final expenditure on education by the private sector consists of private final consumption expenditure on education services, and expenditure on new fixed assets—mainly by private non-profit organisations, and financed in part by the grant from public authorities for private capital expenditure. These grants are treated as transfers rather than final expenditure of public authorities as with the current grants, and are recorded as a source of funds for capital formation in the national capital account. Private final consumption expenditure on education services is an estimate of fees paid by persons to government schools (mainly technical and agricultural colleges), fees and gifts to universities and school fees (other than boarding fees) paid to non-government schools, business colleges, etc., and is based largely on information relating to fees charged and enrolments at these institutions. Expenditure on such items as school books, uniforms, etc and expenditure by parents associations on school equipment are included in categories other than education services (such as clothing, etc., newspapers, books, etc., and household durables). Private gross fixed capital expenditure in the field of education is estimated from statistics of the value of work done on new building and major additions to buildings of private educational institutions.

Estimates for these items of final expenditure of the private sector have been combined with the figures for public sector expenditure in the following table to provide a measure of total outlay on education. This latter item may also be regarded as a measure of the aggregate demand for education services and facilities by the community and can therefore be related to the supply of goods and services available from domestic production (i.e. gross domestic product). This relationship is shown in the table as an indicator of total community effort in the field of education.

## CULTURAL ACTIVITIES

### Cultural organisations

#### Australian Council for the Arts

In January 1973 the Prime Minister announced the Government's intention to legislate to establish the Australian Council for the Arts as a statutory authority. Foundation members of the Council and Boards have been appointed. The Council's first responsibility is to prepare a report on the workings of the new organisation to serve as a basis for legislation.

The basis of the Council will be a number of boards dealing with different areas of the arts, including theatre, visual arts, music, literature, crafts, film and television and Aboriginal arts. The boards will be the main source of policy initiatives in their field, having authority to deal with their own budget allocation, and in consultation with the Australian Council for the Arts, to appoint specialist staff and committees to implement their policies. The Chairman of each of these boards will be a member of the Australian Council for the Arts.

The new Council will be responsible to the Government for the development of broad policies for the arts. It will advise the Government on new initiatives, on overall budgetary requirements and on matters referred to it by the Prime Minister or other Ministers. It will act as a forum for discussion and co-ordinated planning between various boards.

#### Australian Elizabethan Theatre Trust

The Australian Elizabethan Theatre Trust, originally formed to present drama, opera, ballet and puppetry throughout Australia, has accorded full autonomy to most of the performing companies established by the Trust in its earlier years. The Marionette Theatre of Australia continues to operate under Trust administration. The Trust's major functions now are to supply certain financial guarantees to the independent performing companies; to maintain two orchestras to service the requirements of the Australian Opera and the Australian Ballet; to administer subscription booking systems on which both of these companies now operate; to act as entrepreneur in the touring of theatre features from overseas and Australian sources and to provide general services in communication for theatre organisations.

The Trust receives annual grants from Federal, State and local governments and its revenue is supplemented by subscriptions from members and donations from businesses.

#### Arts Council of Australia

With the exception of Western Australia, the Arts Council of Australia has a division in each State and Territory. Throughout Australia there are more than 160 branches. A Federal Secretariat was opened in Canberra in 1969 but moved to Sydney in 1971.

The Federal Secretariat and the Divisions of the Arts Council receive funds from the Australian Council for the Arts. The Divisions also receive State Government assistance and some activities of the Council are supported financially by non-metropolitan local government bodies. The New South Wales Division is represented on the Adult Education Advisory Board in that State, and on the Music Committee of UNESCO. The Tasmanian Division is represented on, and works closely with, the Adult Education Board of that State.

The Arts Council works to bring the arts to country centres and metropolitan and country schools, and is also concerned with taking the arts to children. Tours by high standard companies in opera, ballet, drama, puppets, etc., operate throughout the year. The Arts Council works closely with regional companies in organising country tours for these bodies.

The Council handles a wide range of art exhibitions in city and country areas. Summer schools and other courses for drama, painting, pottery, music, and other arts are an established feature, as are weekend schools of drama, music, painting and pottery. Yearly drama festivals are conducted and school tours are organised.

#### Australian National Trusts

The Australian National Trusts were founded to further the preservation of lands, places, buildings, works, and articles which are of national importance because of educational, aesthetic, historic, architectural, artistic, scientific, cultural, or other special interest.

The first Australian National Trust, the National Trust of Australia (New South Wales), was formed in 1945. Since then National Trusts have been formed in each of the other States. The Trusts in New South Wales, Queensland, South Australia, and Western Australia have statutory authority, and those in Victoria and Tasmania are incorporated under the Companies Act of their respective States. The Australian Council of National Trusts was incorporated in 1965 to co-ordinate the activities of the State National Trusts and represent them at the federal level and internationally.

Membership of the National Trusts is open to all individuals and organisations. Total membership throughout the Commonwealth is approximately 41,000. The Trusts are financed by members' subscriptions and donations from individuals and commercial and industrial organisations, the proceeds of charges for entry to Trust properties and the fund-raising activities of members, including inspections of historic houses. In all States the National Trusts receive some financial support from the State Governments. The Commonwealth supports the Council through an annual grant of \$5,000 for administrative purposes, and in 1972 a further annual grant of \$50,000 was approved, this grant being intended for capital expenditure on the basis of national priorities. The Commonwealth also provides support through taxation concessions.

The number of properties owned or controlled by the Trusts exceeds sixty. These include houses, natural reserves, a powder magazine, a police station, a gaol, two paddle steamers and a hulk, a joss house, and a garden. The Trusts have also established a register of buildings (totalling several thousand) which they consider should be preserved in the national interest because of their historical and/or architectural significance.

#### **Historic Memorials Committee**

The Historic Memorials Committee was established in 1911 for the purpose of securing portraits of distinguished Australians who had taken an active part in Federation. Later the Committee decided to obtain portraits of all Governors-General, Prime Ministers, Presidents of the Senate, Speakers of the House of Representatives, and other notable Australians. In addition the Committee has commissioned paintings recording special events connected with the Commonwealth Parliament.

The Committee comprises the Prime Minister (Chairman), the President of the Senate, the Speaker of the House of Representatives, the Vice-President of the Executive Council, the Leader of the Opposition, and the Leader of the Opposition in the Senate. The Committee is advised on the commissioning of portraits by the Visual Arts Board of the Australian Council for the Arts.

### **Film production**

#### **Australian National Film Board**

The Australian National Film Board advises the Minister for the Media on matters concerned with the production, acquisition and distribution of films required by Commonwealth departments for use within Australia on important matters of national interest and welfare, such as school and adult education, rehabilitation, social development, international understanding, trade and tourist expansion, and immigration; and for dissemination abroad to expand trade and commerce with other countries, to encourage tourist traffic with Australia, to improve Australia's relations with other countries and, where necessary, to explain Australia's national policies, and to encourage immigration.

The Board has twelve members with the Secretary of the Department of the Media as chairman, and the remainder representative of Commonwealth departments, State government instrumentalities and other interested organisations.

#### **Film Australia**

The Film Branch (formerly the Commonwealth Film Unit) of the Department of the Media is the official film production and distribution agency for Commonwealth departments and instrumentalities. It is referred to as Film Australia. It distributes its theatrical and television productions in Australia and overseas through its representatives at Australian official posts. Non-theatrical distribution in Australia is arranged in co-operation with State film distribution agencies, and through the National Library of Australia.

The Film Branch produces films for general exhibition, as well as training and special purpose films. In 1971-72 the Film Branch produced approximately 139 reels of new films and 182 reels of foreign versions of existing films. While many films are released commercially abroad, the emphasis is on distribution of educational and information films through non-theatrical circuits. Selected films have been recorded in most Asian and European languages and in Esperanto and Pidgin.

In addition to films made on its own initiative, Film Australia produces films under the sponsorship of, or with the co-operation of, Commonwealth departments and other government instrumentalities.

#### **Australian Film Development Corporation**

The *Australian Film Development Corporation Act 1970* provided for the establishment of an Australian Film Development Corporation to encourage the making of Australian cinematographic and television films and to encourage the distribution of such films within and outside Australia. The Corporation administers a fund which had an initial capital of one million dollars which is added to from time to time as the Government decides. The Corporation makes investments in films, makes loans to film and television producers, and will guarantee repayment of loans made to producers of Australian films.

### Australian Film and Television School

Legislation establishing the Film and Television School with the status of a college of advanced education is being introduced in 1973. When fully operational the School will offer courses for students in all aspects of film and television production together with in-service programs for professionals and educationalists already working in film and television.

In 1973 the School is running an Interim Training Scheme of basic film and television courses for twelve students, and a series of advanced seminars for professionals and educationalists. The Council of the School is responsible for co-ordinating the Government's assistance programs to film and television training and educational projects. Support is given to workshops, seminars, film schools, together with grants-in-aid for overseas study and experience.

The School buildings will be situated on the campus of Macquarie University.

## Censorship

### National Literature Board of Review

The National Literature Board of Review was established in 1968, following Commonwealth-State agreement, to achieve uniformity in the administration of laws relating to blasphemous, indecent or obscene publications of *prima facie* literary, artistic or scientific merit. In terms of the agreement the Board is established under the Customs (National Literature Board of Review) Regulations. Appropriate Ministers of any State may, under the Agreement, refer works published or distributed locally to the Board for advice. Subject to retention of final responsibility by each Minister it is the intention of the Governments concerned not to act against a publication of merit which the Board advises is suitable for distribution in Australia.

### Film censorship

The Federal Government's powers over censorship of films under the Customs Act extend only to imported films and imported advertising matter. Under that Act the Customs (Cinematograph Films) Regulations provide for the appointment of a Film Censorship Board whose function is to ensure that films and related advertising material coming within certain defined categories, are not admitted into Australia. The Film Censorship Board comprises seven persons and there are six members of a Cinematograph Films Board of Review. Importers have a right of appeal to the Minister.

The Australian censorship function is now the responsibility of the Attorney-General's Department and all States have agreed that the Federal Government should be the censorship authority for the purpose of the State Acts. They have agreed to vest in the two Boards the power to register and classify films.

*Thirty-five mm films.* In 1972, 1,255 films comprising approximately 1,896,000 metres were examined. Of these films 285 originated in the United Kingdom, 249 in the United States of America, 108 in Italy and 613 in other countries. Included in these figures were 605 full-length feature films which constitute the main theatrical attractions. Principal suppliers were: USA (170), UK (98), Italy (55), USSR (34), France (28), Greece (22) and Germany (14). Forty-five (45) feature films were rejected and cuts were made from sixty-six (66). There were twenty-one (21) appeals, seventeen (17) against rejection, two (2) against proposed eliminations and two (2) against classification. Ten (10) appeals were allowed and eleven (11) disallowed. Of the 605 feature films, 113 were awarded the "R" (Restricted) Certificate, 156 were recommended for showing to mature audiences ("M"), 160 were not recommended for children ("NRC"), 100 were classified as suitable for children ("G") and 76 were classified for use under festival conditions only. While the "M", "NRC" and "G" classifications are advisory, children between the ages of 6 and 18 (2 and 18 in South Australia) are excluded by law from seeing "R" films.

In addition to these imported films, there were 57 thirty-five mm films of 27,501 metres produced in Australia.

*Sixteen mm films.* Excluding those imported for television use, 5,481 films of approximately 1,806,200 metres were examined.

*Eight and 9.5 mm films.* There were 1,372 films (approximately 72,700 metres) which were examined.

*Television films.* In 1972, 6,915 films for use on television were examined. There were 746 video tapes of a total running time of 508 hours and the principal importers were TCN (283 tapes), ATN (265 tapes) and ABN (145 tapes). There were 6,169 (2,791,543 metres) of sixteen mm films imported.

The principal suppliers were USA (3,401 films) and UK (1,393 films). Of the total imports 2 were rejected, 492 films were cut (2,415 metres) and 51 were classified as unsuitable for televising.

## Museums and art galleries

A museum or art gallery is considered for statistical purposes to be a building, group of buildings or parts of buildings, managed as a unit and intended predominantly for the permanent display of objects of interest (museum) or objects of art (art galleries) to the general public. Institutions displaying live exhibits are excluded (the more important of these are mentioned on pages 692-4), as are buildings used for temporary displays (exhibitions, commercial galleries exhibiting only for sale) without a permanent stock of exhibits; permanent exhibitions which are ancillary to other activities such as exhibits at council chambers, libraries, hotels, and other commercial enterprises providing services to tourists and sightseers; collections which are not readily accessible to the general public, such as university collections for the use of students and research workers; and historic homes, etc., not specifically intended for the permanent display of objects of interest (i.e. where the building itself and its normal fittings are essentially on display).

### Museums and art galleries

The following table classifies by States and Territories and by ownership the institutions in Australia which have been identified in 1971 as museums and art galleries (branches of museums and art galleries are not shown separately). The information shown below is only collected at two-yearly intervals.

MUSEUMS AND ART GALLERIES: STATES AND A.C.T., AND OWNERSHIP, 1971

(a) Closed for alteration from October 1970 to May 1972.

Some descriptive detail in respect of the major institutions is given on pages 547 to 549 of Year Book No. 55.

## Libraries

The Munn-Pitt Report of 1935 greatly stimulated interest in libraries and librarianship throughout Australia. This is evidenced by the development of libraries, the passing of legislation in all States to increase library services, and the establishment in 1937 of the Australian Institute of Librarians to improve the standard of librarianship. This body was reconstituted in 1949 as the Library Association of Australia and incorporated by Royal Charter in 1963, and its functions now include the promotion and improvement of libraries and library services.

An account of the establishment, growth and functions of the National, Commonwealth, and State libraries is given on pages 533-538 of Year Book No. 55.

### Commonwealth libraries

*National Library of Australia, Canberra.* The National Library maintains and develops a national collection of library material, representative of all the major countries of the world, and it is also responsible for assembling a comprehensive collection relating to Australia and the Australian people. In fulfilment of the latter statutory function it seeks to preserve books, periodicals, newspapers, government publications, pictures, prints, manuscripts, maps, moving picture films, and sound

recordings. It is assisted in this by the deposit provisions of the *Copyright Act* 1968 and has also been enriched by the acquisition of such notable collections as the Petherick collection of 16,500 items in 1911, the Cook manuscripts in 1923, the Cumpston collection on Public Health in Australia in 1936, the Mathews ornithological collection in 1940, the Rex Nan Kivell collection of 16,000 items of Australian and Pacific interest including original paintings, prints, manuscripts, and printed material in 1959, and the Ferguson collection of Australiana, acquired in 1970. The Library maintains a permanent exhibition of paintings, prints, and other historical material selected from its various collections.

In association with the Library of New South Wales, the Library is engaged on a microfilming project to copy original records relating to Australia which are held in Great Britain and other overseas countries.

*Australian National Bibliography*, which appears weekly, monthly, four monthly and annually, lists books published in Australia and books dealing wholly or substantially with Australian subjects or written by Australian authors. It is now computer produced and the records are available in machine-readable form. Catalogue cards for Australian books listed in the bibliography are also made available. The publications of the Australian governments, included in *Australian National Bibliography*, are also listed quarterly and annually in *Australian Government Publications*. A select list of authoritative Australian books of reference and research value is published annually as *Australian Books*. A similar list of serials is published in successive editions under the title *Current Australian Serials*. The Library's principal activity in subject bibliography is its *Australian Public Affairs Information Service*. A listing of maps and atlases, included in *Australian National Bibliography* from 1961 to 1967, has since that time been recorded in a separate quarterly publication entitled *Australian Maps*.

Co-operative bibliographical activity includes recording, in a series of union catalogues, the holdings of the major Australian libraries. The national union catalogue of monographs, maintained in card form, was commenced in 1960 and since then all the larger and an increasing number of the smaller libraries have reported their monograph accessions to the National Library. The major published union catalogue is the loose leaf, continually revised *Serials in Australian Libraries, Social Sciences and Humanities*, which complements another catalogue, *Scientific Serials in Australian Libraries* published by the Commonwealth Scientific and Industrial Research Organization.

Under an agreement with the United States National Library of Medicine, the Library has, since 1969, operated a regional Medical Literature Analysis and Retrieval (MEDLARS) Centre. The Australian MEDLARS Service contributes indexed entries to this system and on request provides computer-produced bibliographies of recent and current material to workers in the various bio-medical fields.

The National Library acts as a central library of documentary and educational films, its film collection containing approximately 9,000 titles, together with Australian historical films. It published *Australian Films: a Catalogue of Scientific, Educational and Cultural Films*, 1940-58 in 1959 and annual supplements in succeeding years.

The National Library's collections contain over 1,300,000 volumes, 25,000 paintings, pictures and prints, 100,000 photographs, 66,000 reels of microfilm, 4,700 running feet of manuscripts, 60,000 motion picture stills, 18,000 reels of moving picture films, 245,000 maps, and 500,000 aerial photographs.

*Patent Office Library.* The Library of the Commonwealth Patent Office, Canberra, contains approximately 16,000 books and a wide variety of periodicals and other literature relating to pure and applied science, industrial technology and the industrial property (patent, trade mark and design) laws and practice of most countries. Patent specifications of inventions are received from the principal countries of the world; present holdings are over 14,000,000. Indexes include a microfilm of a classified index to 3,000,000 U.S.A. patents and translations of abstracts of U.S.S.R. patents.

*Commonwealth Scientific and Industrial Research Organization.* The library holdings of the Organization cover the pure and applied sciences. In addition to the Central Library and Information Services located in East Melbourne, each of the Divisions has specialised collections covering such subjects as food research, building research, soil research, chemistry, physics, animal health, and fisheries. The Central Library maintains a union catalogue of the holdings of all CSIRO libraries.

*The Australian War Memorial Library.* In the War Memorial library are housed the documentary and pictorial records of Australia's fighting services in wars in which they have participated. The printed records section contains over 70,000 volumes, a large collection of military maps, newscuttings and newspapers, sound recordings, war posters, and postage stamps. The collection of official war photographs covering the 1914-18, 1939-45 and Korean Wars numbers over 250,000, and a collection of official motion picture film depicts Australia at war. Adequate facilities exist for public research and requests for information are met where practicable.

*The Commonwealth Parliamentary Library.* The library is organised to provide a specialised service to the Commonwealth Parliament. The two main sections are the Legislative Research Service and the Legislative Reference Service. The Research Service comprises six groups—(i) Defence, Science Technology; (ii) Education and Welfare; (iii) Finance, Industries, Trade and Development; (iv) Foreign Affairs; (v) Law and Government; (vi) Statistics. The groups are staffed by specialists who prepare analyses and interpretations of specific issues with which the Parliament is or may be concerned. These are usually in written form but may consist of consultations with individual Members of Parliament or the Committees of Parliament. The Research Service also provides specialised information for Members. The Reference Service answers questions and provides information on any subject, mainly from books, government documents, Hansard reports, periodical articles, and newspapers. The Library collection is concentrated on topical material, supported by a wide collection of standard references; it totals 25,000 titles, including 8,000 serial titles. The Library publishes the *Parliamentary Handbook* which is a standard reference work, a series of periodical abstracting bulletins, occasional annotated reading lists and a fortnightly accessions list.

*Other Commonwealth Government Libraries.* Most Commonwealth authorities have specialised collections in their own fields and in addition draw largely on the National Library.

*Library services in the Territories.* The Northern Territory Library Service maintains five centres in the Territory. At 30 June 1972, stocks totalled 72,874 volumes which were held at the following centres: Darwin, 31,026; Nightcliff, 10,120; Alice Springs, 18,638; Tennant Creek, 6,776; Katherine, 6,314. The National Library, through its Extension Services Section, conducts the Canberra Public Library Service to residents of the Australian Capital Territory, to whom 1,213,502 loans were made in 1971–72. At 30 June 1972, 379,192 volumes were held, 226,977 at adult libraries, and 152,215 at children's libraries.

### State libraries

*New South Wales.* At 30 June 1972, 188 councils had established libraries in terms of the Library Act, 1939. During 1971–72 they spent on their libraries \$8,323,616 including \$2,092,061 received in subsidy. There are 266 libraries, of which 97 are in the metropolitan area and 169 in the country. There are also 24 bookmobiles, of which 10 are in the Sydney metropolitan area and 14 in country municipalities and shires. These libraries contain 4,953,510 volumes and issued 25,306,620 books during 1971. The Library of New South Wales provides a central cataloguing service for municipal and shire libraries constituted under the Act.

Under the Library of New South Wales Act, 1969, the former Public Library of New South Wales became the Library of New South Wales. It includes a General Reference Department of 658,699 volumes, an Extension Service, together with the Shakespeare Tercentenary Memorial Library, and the Mitchell and Dixon Libraries and Galleries which are mainly devoted to Australian and Pacific material. The Extension Service lends books to municipal and shire libraries and to individual borrowers. The total stock of the Service is 83,810 volumes, and 25,471 books were lent to public libraries and individual borrowers during 1971–72. In 1972 there were 281,253 volumes in the Mitchell Library, in addition to manuscripts, maps and other material. The total number of volumes in the Library of New South Wales now exceeds 1,203,006 apart from manuscripts, historical pictures, and other material. The Library maintains an adult education section servicing adult education activities for the Universities of Sydney and New England and the Workers' Educational Association.

Other important libraries in New South Wales are: Teachers Colleges, 389,081 volumes; the City of Sydney Public Library, 242,512; Department of Technical Education, 360,333; Railway Institute, 167,787; Parliamentary Library, 145,650; Australian Museum, 40,400; Government Transport Institute, 25,168; New South Wales Teachers' Federation Library, 27,000; Workers' Educational Association, 16,250; and the Library at the National Herbarium, 12,100 volumes.

*Victoria.* During 1972–73, 170 councils representing 3,278,000 Victorians shared Government library grants amounting to \$2,786,597. Of this amount, \$2,558,600 was direct municipal library subsidy. With the addition of expenditure from these councils' own funds the total expenditure on municipal library services for 1972–73 was nearly \$7,000,000. In 1971–72, 1,028,000 borrowers used the free library services now totalling 3,506,000 books, to the extent of 17,572,000 issues.

Particularly in the country, services have been developed by means of regional libraries. These services, of which there are 27 at present, comprising a total of 130 councils, consist of groups of councils which pool their resources, book-stocks and trained staff. The Victorian Government provides an Establishment and Regional Library Development Grant of \$200,000 per annum.

There are 17 bookmobile services operating in Victoria, 12 in country regions and 5 in the metropolitan area.

The collections of the State Library of Victoria comprise more than 1 million volumes. Of these the La Trobe collection consists of approximately 60,000 volumes as well as many pictures, manuscripts and old newspapers. The State Library receives 7,500 periodicals, annuals and newspapers. The Library also administers the State Archives, which comprise 55,000 shelf feet of records.

*Queensland.* The holdings of the State Library of Queensland and its extension services in 1971-72 were: main reference collection, 243,002 volumes, 12,072 pamphlets, 17,000 maps (approximately); Country Extension Service Collection 95,192 volumes; Oxley Memorial Library Collection 30,759 volumes and 46,241 other items. Interim count for current titles in the Serials section is 4,650 titles.

Local authorities are empowered by the Libraries Acts to establish and conduct library services as a function of local government. In 1971-72, 88 local authorities were conducting 168 library services. The Brisbane City Council has established 21 of these libraries, also a mobile library to serve eight outlying suburban areas, and a bookmobile which takes books to incapacitated people. There are 139 libraries in Queensland free to adults. To help overcome the problems of a large area and sparse population, various local authorities have established 4 regional library services with headquarters at Charleville, Barcaldine, Mount Isa and Emerald, respectively. During 1971-72 the State Government provided a grant of \$1,155,059 from consolidated revenue to finance the activities of the State Library, to pay subsidies to local bodies conducting free library services, and for the acquisition or improvement of library buildings and equipment, and to pay lesser subsidies on books, equipment and maintenance to local bodies conducting subscription libraries.

At 30 June 1972 the Parliamentary Library of Queensland held about 100,000 volumes and pamphlets.

*South Australia.* The Reference Department of the State Library of South Australia contains 295,432 volumes and receives over 3,200 periodical titles. There are 61,604 volumes in the Adelaide Lending Service. The Country Lending Service has 605,980 volumes. The Adelaide Lending Service lent 369,187 books in 1971-72, and the Country Lending Service, 163,747.

The library of the Parliament of South Australia held approximately 60,000 volumes in 1972.

There are 31 local public libraries in South Australia provided by 22 local government and other authorities. The libraries are subsidised on a \$1 for \$1 basis by the State Government. The Libraries Board of South Australia, through the State Library of South Australia, provides various central services. Book-stocks are pooled in the State Library of South Australia and are interchanged between the libraries.

At the end of June 1972 these local public libraries contained 303,246 books. There were 127,172 registered borrowers. During 1971-72, 2,365,738 books were lent.

*Western Australia.* The Library Board of Western Australia administers the State Reference Library and the Central Music Library, and provides all books and related services to 139 local public libraries throughout the State. Its stocks at 30 June 1972 were 1,122,796 volumes, comprising circulation stock (including books in public libraries), 799,052 volumes, State Reference Library, 305,363 volumes (including unbound) and Central Music Library, 4,656 books on music and 13,725 scores. The Central Music Library also held 2,314 recordings in stock at 30 June 1972.

*Tasmania.* The Tasmanian Library Board administers the State Library in Hobart, the extension of library services throughout the State and State aid to municipal libraries. State Government expenditure on library services in 1971-72 was \$1,011,025. A regional municipal library system commenced in April 1965 in 5 north-western municipalities, with headquarters in Burnie, and smaller libraries in other large towns and a bookmobile in rural areas. A second regional library system, with headquarters in Launceston, was opened on 1 July 1971. This regional system serves the City of Launceston and nine municipalities on either side of the Tamar estuary. Fourteen southern municipalities are served by 2 bookmobiles based in Hobart and a bookmobile serves schools in the Hobart metropolitan area. At 30 June 1972 the State Library in Hobart held 142,353 reference volumes and 116,833 lending volumes. The Board provided to municipal libraries by way of subsidy 419,008 books out of a total bookstock of 436,249 available for this purpose.

The State Library continued to provide a library of documentary films (4,616) and recorded music (15,827 discs) available for loan throughout the State.

### University libraries

A description of libraries in Australian universities appears on pages 539-41 of Year Book No. 55. The following table shows the number of books and pamphlets held, accessions during the year, and expenditure on libraries for each university. For further information, see annual mimeograph publication *University Statistics—Part 2: Staff and Libraries* (No. 13.8).

## UNIVERSITY LIBRARIES

University	Books and pamphlets (a)	Accessions during year (b)	Expenditure (c)

## Children's libraries and school libraries

For details of Commonwealth grants for the development of secondary school library services, see pages 673-4 of this chapter.

*New South Wales.* Children's libraries are being developed as departments of municipal and shire libraries. The Education Department maintains a school library service for the fostering of State school libraries, which are maintained partly by parents and citizens associations and partly by departmental subsidy. Secondary and central schools, and an increasing number of primary schools, have teacher librarians.

*Victoria.* The Education Department provides for the building of libraries in secondary and technical schools, and new primary schools with 10 or more classrooms. A subsidy of up to \$11,000 is available to other primary schools for library buildings. Library furniture is provided, establishment grants are given to new schools for the purchase of books, and the Government provides an annual per capita grant to all schools. At June 1972, 525 primary, 254 secondary, and 96 technical schools had central libraries.

*Queensland.* In Queensland, 167 libraries are free to children. The Brisbane City Council conducts 21 of these, also a mobile library to serve eight outlying suburbs, Country children may borrow from the Country Extension Service which has a separate children's collection. The purchase of books for State school libraries in Queensland is financed by school committees and parents associations, with a \$1 for \$1 subsidy from the Department of Education.,

*South Australia.* A children's library of 48,858 volumes is used by school classes and individual children living in the metropolitan area. In 1971-72, 193,667 books were lent. A lending service for young people from thirteen to eighteen years of age has a stock of 18,169 volumes, and in 1971-72, 97,651 loans were recorded.

*Western Australia.* The Education Department provides library services, issues materials and gives library allocations for library resources purchased by government schools. All government high schools are provided with library accommodation and furniture and their libraries are staffed by school librarians according to the size of the school. New high schools are issued with books to a value of \$1,500 in each of their first three years and all high schools receive an annual issue of books and an allocation for book purchases. New primary schools are issued with books to the value of \$200 or \$400 in their first year according to their student enrolments. All government and non-government schools with fifth-year students receive an annual issue of books for matriculation studies. A number of primary schools have organised school libraries in rooms available, or in premises provided by the parents and citizens associations. Some new primary schools are being provided with a resource centre (i.e. a library and an audio-visual aids centre) as part of their construction and these are being progressively added to existing schools. Annual issues of books are made to all government primary schools, varying according to the size of the school, and assistance is provided for the purchase of

library books. The Charles Hadley Travelling Library provides 864 boxes of books which are circulated to all small schools, mission schools, and special classes. Children who are unable to attend school are provided with books from the Correspondence School's library.

*Tasmania.* All the State's municipal libraries have Lady Clark Memorial Children's Libraries. The Lady Clark Memorial Children's Library in the State Library in Hobart has 27,233 books and serves schools in the Hobart metropolitan area by bookmobile. More than 150 schools which are not close to a municipal library have collections of books on loan from the Lady Clark Memorial Children's Section of the Division of External Services of the State Library, which has a stock of 201,343 books. Libraries have been built up in most schools, with Education Department subsidies matching local funds to levels determined by the size of the school. A new Central Library Service Branch offers bibliographic and technical advice on school library development.

### Book publishing

Prior to 1972 the statistics of book publishing in Australia and the External Territories were prepared and published by the Bureau of Census and Statistics from data supplied by the National Library of Australia. For details see Year Book No. 58, page 680-1 and earlier issues.

For 1972 the statistics have been compiled and published by the National Library but they are not comparable with those statistics published by the Bureau for previous years.

#### Number of publications received

The table below shows the number of books and pamphlets (including leaflets), published in Australia in 1972 and received by the National Library up to December 1972, by State and Territory of publication and publisher.

#### AUSTRALIAN BOOKS AND PAMPHLETS PUBLISHED IN 1972(a) BY STATE AND TERRITORY OF PUBLICATION AND PUBLISHER

### Archives

General interest in archives in Australia was aroused in 1888, when the Colony of New South Wales celebrated its centenary, the occasion being marked by official publication in 1889-1894 of the *History of New South Wales from the Records* by G. B. Barton and A. Britton, and in 1893-1898 of the series of *Historical Records of New South Wales*, edited by A. Britton and F. M. Bladen. Both publications were based on transcripts of documents in London which had been made by Mr James Bonwick, appointed Archivist by the Government of New South Wales in 1884.

In 1902 Mr F. M. Bladen presented to the Commonwealth Government a report on European Archives, in which he recommended the establishment of a Commonwealth Archives Office and the copying of further official records in London. The copying project continued and some of its results were embodied in the volumes of *Historical Records of Australia*, published by the Commonwealth in 1914–1925, under the editorship of Dr J. F. Watson.

Measures for the preservation and storage of original documents were not taken until later years. In the absence of duly constituted archives offices, the various major libraries throughout Australia undertook the collection of historical records, both from official and private sources. An archives department of the Public Library of South Australia was established in 1920, and other institutions formed archives branches in, 1944 (Commonwealth National Library), 1945 (Public Library of Western Australia), 1948 (State Library of Victoria), 1949 (State Library of Tasmania), 1953 (Public Library of New South Wales), and 1959 (State Library of Queensland). Legislation to govern arrangements for official records was passed as follows: South Australia (1925, 1936), Tasmania (1943, 1965), Queensland (1943) and New South Wales (1960). Since 1961, separate authorities for official archives have been established: Commonwealth Archives Office, 1961; Archives Office of New South Wales, 1961; Archives Office of Tasmania, 1965. A Business Archives Council was established in 1954 to co-ordinate activities in the field of company records and a number of firms have established their own archives services. Certain churches have also provided appropriate facilities for ecclesiastical records. Other corporate and private archives continue to be collected by several archives offices, libraries and more recently, universities.

### Commonwealth Archives Office

An account of the development of the Commonwealth Archives Office and a detailed description of its functions appear on pages 543–4 of Year Book No. 55. The Archives Office functions as a central agency for the control of records created by the Commonwealth Government which are no longer required in the day-to-day business of government. At 31 December 1972 the total holdings of the Archives Office throughout Australia amounted to 554,000 shelf feet of records, including 212,000 feet of permanent material, such as files, manuscripts, registers, cards, books, maps, plans, models, paintings, films, photographs, microfilms, recordings and tapes. The Office regulates access to all Commonwealth records, whether in its custody or held by departments, in accordance with the Government's access rules. These provide that, with certain exceptions, Commonwealth records which are 30 years old or more are available on open access to all accredited members of the public. In January 1972 the Government decided that the thirty year access rule should apply to Cabinet papers also; and that because of their special interest, the remainder of the Cabinet papers up to the end of 1945 should be released for public examination. It further decided that departmental papers for this period should become available at the same time as Cabinet papers. The Archives Office provides an advisory service to inquirers, both official and public, on appropriate sources of information for particular topics including material held by the Office itself, by other Commonwealth agencies and elsewhere. During 1971–72 some 322,000 items were lent to departments. The Office carries out searches for departments and provides information from the records in its custody. Some 5,500 requests for these services were received in 1972. In accordance with the Commonwealth Government's access rules, the Office also supplies information to members of the public engaged in academic or other forms of research. Records may be consulted by holders of a search ticket and 459 public search tickets are currently valid. During 1972 inquiries were received from 514 researchers. There were 8,000 daily visits to archives search rooms and repositories by officials and the public, and 57,000 items were produced for consultation.

The headquarters of the Commonwealth Archives Office is in Canberra, and there are branches in Sydney, Melbourne, Brisbane, Adelaide, Perth and Darwin; additional branches are being established in Hobart and Townsville. In 1972 record surveys were conducted in Tasmania, North Queensland, the Northern Territory, Papua New Guinea and Norfolk Island. The Office maintains liaison with similar organisations in overseas countries and is a national member of the International Council on Archives, established under the auspices of UNESCO.

### Archives Office of New South Wales

The Archives Authority of New South Wales is a statutory corporation established under the Archives Act 1960 and has custody and control of the State archives. These are preserved in the Archives Office of New South Wales.

The Act requires that before any public records of the State are destroyed or disposed of, notice must be given to the Archives Authority which may then require any such records to be made available to it. Records transferred to the Authority become State archives and when 30 years old are generally open to holders of a reader's ticket.

The State archives at 31 December 1972 occupied 33,953 feet of shelving. This excludes more than 16,000 maps and plans besides other records which cannot be readily measured. In addition there were about 100,000 feet of permanently valuable records housed mainly in the Government Records Repository.

#### **Archives Office of Tasmania**

The Archives Office of Tasmania operates under the *Archives Act* 1965, No. 47. The statutory authority under the Act is the Tasmanian Library Board. No records of State and local authorities may be destroyed or otherwise disposed of except on the written authority of the Principal Archivist. The holdings of the Archives Office amount to over 12,000 shelf feet (including non-public records).

Three parts of a 'Guide to the Public Records of Tasmania' have been published and five further record groups are being inventoried for publication. A file lending service is conducted for the benefit of departments and authorities which have deposited semi-current records in the Archives Office. Research workers have access to records in the search room and a mail reference service is provided for country and interstate inquirers. A panel of private researchers is available who hire their services to inquirers who wish to undertake prolonged search of documents.

#### **Australian National University Archives**

The Australian National University Archives was established in 1954 when the records of the Australian Agricultural Company were acquired, and in 1959 its collecting activities were expanded to include records of employee organisations. The University now holds a collection of the records of businesses (approximately 135 accessions) and of trade unions (approximately 205 accessions). The aim is to gather primary source material to support advanced research within the University in economic history, history, and political science. Detailed arrangement and description are undertaken and close liaison is maintained with scholars in the Research School of Social Sciences to keep the collecting policy abreast of trends in research. Scholars from other universities are also helped, and reference work is carried out to answer inquiries. The University Archives include deposits which have been microfilmed and pamphlet collections of interest to research workers in political history.

#### **Business Archives Council of Australia**

The Business Archives Council of Australia works for the preservation of business records and promotes the writing of business history. The Council itself does not collect business records. The main collecting centres are the Archives of the Australian National University, the University of New England and University of Melbourne. The Australian National University and the University of Melbourne have strong collections covering a wide range of business activity, and are respectively notable for records of trade unions and mining companies. The University of New England concentrates on rural industries.

### **Botanical and zoological gardens**

In addition to the zoological gardens referred to in the following paragraphs there are numerous privately owned zoos and sanctuaries, many of them at tourist resorts, which maintain collections of Australian flora and fauna. There are also various national parks, forests, reserves, etc., dedicated for public use, which are preserved largely in their natural condition.

#### **New South Wales**

The Sydney Botanic Gardens are situated on the shores of Farm Cove, Sydney Harbour. They occupy sixty-six acres and contain a large collection of flowering plants, shrubs and trees as well as hothouses of orchids and ferns.

The Zoological Gardens at Taronga Park, on the northern side of Sydney Harbour, occupy about seventy acres and contain an aquarium. In 1971-72 admissions to the grounds were 877,681. The receipts of the zoological department of the Taronga Park Trust amounted to \$856,276 in 1971-72 and expenditure was \$748,915. Exhibits at 30 June 1972 comprised 887 mammals, 2,132 birds, 297 reptiles, 54 amphibians and 1,169 fish.

#### **Victoria**

The main botanical gardens in the State are the Royal Botanic Gardens, an area of eighty-eight acres within one mile of the centre of the City of Melbourne, containing over 12,000 species of plants, of which there are some 30,000 individual specimens. Many species of native birds breed on islands in lakes within the gardens. In October 1970, an extension was made to the Royal Botanic Gardens by the purchase of 395 acres at Cranbourne on Mornington Peninsula for purposes of a Botanic Gardens and Research Institute devoted to the growing, display, and study of Australian native plants.

The Zoological Gardens in Royal Park contain a wide selection of animals, birds and reptiles. A wild life sanctuary is also maintained at Healesville.

### **Queensland**

Botanical gardens have been established in Brisbane and in several other cities. The Brisbane Botanic Gardens occupy approximately forty-six acres on the banks of the Brisbane River in the central city area and are noted for their collections of palms, tropical trees and shrubs, and succulents; they contain over 7,500 species.

Initial development has started on a new botanic gardens in the foothills of Mount Coot-tha, about three miles from central Brisbane. The area being developed is approximately 200 acres.

### **South Australia**

The Adelaide Botanic Gardens covers 45 acres and contains collections of Australian and exotic plants from low rainfall and sub-tropical regions. In glasshouses are collections of tropical, ornamental and economic plants. Special collections include cacti and succulents, bromeliads, and begonias. An up-to-date comprehensive botanical and horticultural library is maintained. The State Herbarium, established in 1952, contains about 250,000 specimens.

A 35 acre property at Blackwood, containing a collection of Australian and South African plants and the Mount Lofty Botanic Garden (approximately 180 acres) are being developed and are expected to be opened to the public by the mid-1970's.

The Zoological Gardens, opened in 1883, have an area of approximately 19 acres, and contain a fine collection of animals, reptiles, and birds.

### **Western Australia**

A botanical garden and arboretum for the native plants of Western Australia is in King's Park, a reserve of almost 1,000 acres close to the centre of Perth. The indigenous flora of the State is represented in the Western Australian collection by approximately 1,200 species which have been successfully brought to maturity. Trees native to the southern half of the State are grown as specimens in the arboretum.

Regular field work is undertaken to collect material and carry out botanical exploration. Seed of native plants collected is distributed from surplus stocks to botanical institutions throughout the world and sold to private growers and nurserymen. An annual seed list offers from 1,000 to about 1,200 species. About 13,000 packets of seed are distributed each year.

King's Park undertakes research into the biology of native plants. Apart from purely fundamental aspects, this program has two main purposes: firstly, to bring native plants into cultivation, including the improvement of the varieties grown and the methods of their propagation; secondly, to manage the extensive area of bushland park, which is an increasingly important facility for recreation in the urban environment.

The Zoological Gardens at South Perth have an area of 44 acres and are under the control of the Zoological Gardens Board. Animals, birds and reptiles are exhibited. During the year 1971-72, 366,241 people paid for admission into the zoo and in addition, 3,297 disadvantaged children and adults were admitted free.

### **Tasmania**

The Royal Tasmanian Botanical Gardens adjoining Government House on the Queen's Domain contain a fine collection of exotic trees and shrubs and a small aviary.

There are three, main, privately owned, wildlife sanctuaries and zoos, each with a few exotic animals, at Granton near Hobart, at Punch Bowl near Launceston and at Westbury, 20 miles from Launceston. The Launceston City Council keeps a small collection of animals and birds at City Park.

### **Northern Territory**

The Darwin Botanical Gardens occupy seventy-four acres and feature thirty acres of tropical plants of both native and overseas origin. Four acres are used for an amphitheatre and contain a number of native and exotic plants. The Gardens are controlled by the Corporation of the City of Darwin.

### **Australian Capital Territory**

The Canberra Botanic Gardens on the lower slopes of Black Mountain have been under development since 1950. The gardens are on a 100-acre site and are being developed for the study of the botany, propagation, and cultivation of Australian native plants. The Gardens were opened for public inspection in 1967 and were officially opened in 1970.

The Tidbinbilla Nature Reserve covers 11,500 acres of the Upper Tidbinbilla Valley, about 25 miles from Canberra. Approval for its establishment was given in 1962 and it was declared a Nature Reserve under the Public Parks Ordinance on 27 October 1971. This Reserve has proved a great attraction for visitors with the attendance figure rising from 42,700 in 1967 to approximately 138,000 in 1972. The Jervis Bay Nature Reserve in the Commonwealth Territory of Jervis Bay consists of 10,670 acres of coastal area. Although the area has been managed as a reserve over a number of years, the Reserve was declared on 7 October 1971. Both Tidbinbilla and Jervis Bay Nature Reserves are designed to conserve the indigenous plant and animal communities and to enable the public to see the fauna in their natural habitat.

## SCIENTIFIC AND INDUSTRIAL RESEARCH IN AUSTRALIA

### Background

Scientific research in Australia increased considerably with the outbreak of the 1939–45 War and research activities continued to expand in the period of rapid post-war economic growth. Prior to 1939 Australia's research effort had been oriented towards the biological sciences, but under the stimulus of military requirements, this effort spread to the physical sciences and to problems of industrial technology. Research in the medical and social sciences also increased. With the overall research expansion a growing number of government agencies, both Federal and State, university departments and industrial organisations established scientific programs related to their various areas of interest and responsibility.

Much of the present day research effort is directed towards the development of natural resources and of primary and secondary industries. For information about research in the rural industry and the mineral industry, *see* Chapters 22 and 26 respectively. There is also considerable scientific research effort in the areas of medicine, space, the environment, social sciences, atomic energy, meteorology and oceanography.

### Commonwealth Government

The Commonwealth Government has played a key role in the war time and post-war development of the national scientific effort through programs of research and related scientific activities in its own establishments and in funding scientific activities generally.

Over thirty Commonwealth Government agencies are engaged in research and scientific activities having a wide range of interest including development of natural resources and of primary and secondary industries; health; communications and transport; atomic energy; defence. Details of these activities are contained in annual reports of the individual agencies. A brief description of the research activities of the Department of Supply is given in Chapter 4, Defence.

Through its own agencies the Commonwealth Government engages in extensive research in the area of defence science (for details *see* page 96) Research programs are undertaken to meet Australia's defence needs and to fulfil agreed commitments under international arrangements. Australia has co-operated with allied nations in scientific projects of defence significance, particularly where such projects add to technological development in Australia.

### Commonwealth Scientific and Industrial Research Organization

The Commonwealth Scientific and Industrial Research Organization (CSIRO) is Australia's largest civil scientific body and now has a staff of about 6,400 including some 2,000 professional scientists. Its main function is to carry out scientific research for the primary and secondary industries of the Commonwealth and its Territories. It does not conduct defence research, medical research or atomic energy research. The other powers and functions of CSIRO as defined in the *Science and Industry Research Act 1949*, include:

- training of scientific research workers and the awarding of scientific research studentships and fellowships;
- making of grants in aid of pure scientific research;
- recognition or establishment of associations of persons engaged in any industry, for the purposes of carrying out industrial scientific research and the co-operation with, and the making of grants to, such organisations;
- testing and standardisation of scientific apparatus and instruments and the carrying out of scientific investigation connected with standardisation;
- collection and dissemination of information relating to scientific and technical matters; and
- publication of scientific and technical reports, periodicals and papers.

CSIRO is a statutory corporation operating under its own Act of Parliament and exercising its powers subject to the regulations and the approval of the Minister for Science.

The governing body of the Organization is the Executive, which is located in Canberra and consists of nine members appointed by the Governor-General. There are five full-time members, one of whom is chairman, and four part-time members. At least five of the members must possess scientific qualifications. The Executive is responsible to the Minister for the policy and the work of the Organization.

CSIRO has thirty-six Divisions, each working in some particular area of research such as animal health, tropical pastures or textile physics. Since the Organization's activities are Commonwealth-wide and often involve extensive field work, a number of branch laboratories and field stations have been established in various parts of Australia. The Head Office is in Canberra and Regional Administrative Offices are located at Brisbane, Canberra, Melbourne, and Sydney. The Organization also has an Australian Scientific Liaison Officer in London and Scientific Counsellors in Washington and Tokyo.

The Organization's total budget for 1972-73 was about \$77,500,000. Some four-fifths of this was provided directly by the Commonwealth Government, the remainder being contributed by primary industry, individual companies, Australian and overseas government instrumentalities and private foundations.

### **The Commonwealth Meteorology Research Centre**

The Commonwealth Meteorology Research Centre is a joint agency of the Commonwealth Bureau of Meteorology and the CSIRO Division of Atmospheric Physics, and is located in Melbourne.

The work of the Centre consists of studies of the behaviour of the earth's atmosphere, with emphasis on general circulation, directed towards improvement in understanding the distributions and variations in climate on the earth, and towards improvement in the accuracy and time-scale of weather forecasting. This includes the formulation and testing of numerical hemispheric models and the modelling of circulations of a more regional type. The approach to these problems will, as desirable, develop an interpretation and use of new forms of observational data.

### **Australian Institute of Marine Science**

The Australian Institute of Marine Science, to be established near Townsville, Queensland, over the next five years is one of the most recent ventures in scientific research by the Australian Government. The Institute will give particular attention to the ecology of the Great Barrier Reef and of associated biological systems, and also undertake oceanographic research in the Coral Sea and northern Australian waters.

### **Nuclear energy**

The Australian Atomic Energy Commission is a statutory corporation which functions under the direction of the Minister for Minerals and Energy. It consists of five members. The Commission is responsible for undertaking and encouraging the search for and mining of uranium and is empowered to co-operate with the appropriate authorities of the States in connection with these and related matters. It is authorised to develop the practical uses of atomic energy by constructing and operating plant for this purpose, carrying out research, and generally fostering the advancement of atomic energy technology. A detailed description of its activities is contained on pages 560-562 of Year Book No. 55.

The Australian Institute of Nuclear Science and Engineering comprises the Australian Atomic Energy Commission and Australian universities. The Institute's operations are financed by membership subscriptions and a special Commonwealth Government grant which amounted to \$200,000 in 1972-73. The purpose of the Institute is to stimulate research and training in nuclear science and engineering within the universities and to arrange access for university research workers to the highly specialised equipment at the A.A.E.C. Research Establishment, Lucas Heights, New South Wales.

The Australian School of Nuclear Technology is jointly sponsored by the Commission and the University of New South Wales. Courses are offered in nuclear technology, production and use of radioisotopes, radiological safety, health physics, and other related topics.

### **Nuclear power**

In October 1969 the Commonwealth Government announced a proposal to build a nuclear power station of 500 megawatt capacity at Jervis Bay, on the New South Wales south coast, by 1975, subject to a satisfactory tender. This followed discussions early in 1969 between the Commonwealth and all State Governments. World-wide tenders for the station were called for, and assessed. However, in June 1971, the Government decided to defer a decision for 12 months in the light of Australia's financial circumstances at that time. In June 1972, the Government further deferred a decision on construction of the Jervis Bay nuclear power station for an indefinite period because of developments in the nuclear power industry overseas.

### **Nuclear fuel**

Important discoveries of uranium have recently been made in the Northern Territory. Although their full extent has not yet been determined, early estimates suggest that Australia will become a major producer of uranium.

### **Ionospheric Prediction Service**

The Ionospheric Prediction Service Branch of the Department of Science exists to assist users of radio communications to achieve the most effective and efficient use of radio transmissions which are dependent on or influenced by the ionosphere. The Branch staff make regular measurements of the state of the ionosphere above Australia and its territories and of the sun, and issue both long-term and short-term predictions of the state of the ionosphere as it applies to radio communication situations. To achieve this the Branch must also conduct research into the effects of solar and other geophysical phenomena on the ionosphere and into the subsequent effects on the propagation of radio signals. It performs other functions associated with the above activities including advisory and scientific data services.

## **State governments**

Scientific programs of the six State governments are directed mainly towards agriculture, fisheries, forestry, public health, water supply and power generation, engineering and construction, and areas of the social sciences. These research programs are generally of an applied nature and are related directly to the various responsibilities of the departments and instrumentality concerned. State government research programs extend to such fields as physical and mental health, child welfare, vocational guidance, etc., and represent an important contribution to Australia's overall research effort.

## **Universities**

The fifteen universities in Australia are engaged in an extensive and diverse range of research programs in the physical and earth sciences, medicine, agriculture and biological sciences, and social sciences. University research is mostly of a fundamental character although some university departments are also concerned with applied research directed to the solution of practical problems. In 1959 the Council of the University of New South Wales established a non-profit research and development company, Unisearch Ltd., which provides technical advice and service for both large and small industrial organisations.

The post-war growth of university research has been accompanied by rapid development of post-graduate studies which, prior to the late 1950s, were undertaken mainly overseas. In 1972, 6,862 students were enrolled at Australian universities for higher degrees in science-oriented subjects.

Details of the courses offered in Australian universities together with background information on their teaching and research programs, and a comprehensive summary of general university development in recent years are given in Year Book Number 55, 1969 pages 507-9. The reader should also refer to the handbooks and calendars published by each university.

## **Industry**

An increasing amount of research and development is being undertaken by Australian industries. Firms with major research programs are mainly in the chemical, pharmaceutical, electronic, sugar, paper, mining and steel industries. Several industries have established research institutes or associations.

### **Productivity action in Australia**

Two complementary organisations—the Productivity Group Movement and the Productivity Promotion Council of Australia are specifically concerned with action to improve productivity in Australia. Executive and administrative services are provided by the Department of Labour.

*Productivity Group Movement.* The role of productivity groups is to improve the productivity performance of individual member undertakings. Groups were first formed in New South Wales and Victoria in 1957 and were later established in all States. In April 1973, there were some 250 groups comprising over 5,700 member undertakings throughout the nation.

A group consists of about twenty members whose representatives meet regularly to exchange practical ideas and experiences and to seek improvement in the effectiveness of member's operations. There are three main types of productivity groups: mixed industry groups which bring together

knowledge and experience from a wide variety of fields; single industry groups whose members are in the one industry (for example, printing, transport, timber); and professional type groups comprising people such as production engineers and personnel managers.

In each State there is a Productivity Groups Advisory Council which is a forum for the exchange of ideas among the groups and seeks to serve their common interests. At the national level there is a Productivity Groups National Committee on which each State Council is represented. This Committee publishes a quarterly news magazine for groups, arranges productivity group publications, films and other aids to group operation and develops national themes and group expansion programs.

*Productivity Promotion Council of Australia.* The Productivity Promotion Council of Australia was inaugurated in September 1969. It is concerned with community education in productivity, stimulation of senior management's interest in productivity action and collaboration with employer and employee organisations, and professional bodies in arranging joint activities on factors affecting productivity. It also actively supports the development of the Productivity Group Movement.

Membership of the Council is drawn from organisations, business concerns, government and semi-government bodies and individuals. Finance is provided by members' subscriptions on a sliding scale based on type and size of undertakings.

The Council operates through a National Committee, State Branch Committees and Advisory Panels. The National Committee is composed of nominees from major national employer and employee associations, Commonwealth government departments and a number of individual experts. Branch committees have been established in New South Wales, Victoria, Queensland, South Australia and Western Australia.

### Other research (including joint projects)

#### Antarctic research

Permanent Australian research stations have been established in the Antarctic since 1947, when the Federal Government organised the Australian National Antarctic Research Expeditions (ANARE). The Antarctic Division's budget for 1972-73 was approximately \$3,000,000.

During 1971-72 scientific work continued at Macquarie Island, Davis, Mawson and Casey, and summer bases were occupied at Moore Pyramid and Mount Creswell. Australia's work in the Antarctic region includes surveying, geology, geophysics, meteorology, glaciology, upper-atmosphere physics, cosmic-ray research, zoology, botany and some aspects of medical science.

Basic work in aspects of upper-atmosphere physics and comprehensive meteorological observations are conducted at all stations, and cosmic-ray research of particular interest at high latitudes is carried out at Mawson.

In glaciology, the major work at Casey was the drilling of boreholes to a depth of 100-200 metres at three sites on the local ice cap. Cores were returned to Australia for analyses. During summer, accurately fixed markers were established at eleven sites on the ice surrounding the southern Prince Charles Mountains, 520-830 kilometres south of Mawson. The markers will be re-measured in the future to establish the rate of ice movement. Investigations were made into ice thickness, snow accumulation, oxygen isotopes and sub-surface temperatures.

In biology, studies were conducted on the sea-birds and seals at all stations, and on the terrestrial invertebrates and the biota of the highly saline lakes at Davis. Environmental studies in human physiology were made by medical officers at the ANARE stations. In January 1972, geodetic surveys were conducted in the southern Prince Charles Mountains, using aircraft from a temporary camp in the mountains.

#### Space projects

Australian participation in scientific projects making use of artificial earth satellites began with facilities established as a contribution to the program of the International Geophysical Year (1957-58).

Space tracking stations constructed and operated at a number of sites in Australia through joint arrangements with the United States of America have played an important role in the American manned space flight programs. For details see, page 96.

#### Upper atmosphere

A program of upper atmospheric research using sounding rockets of Australian manufacture is carried out from Woomera by Australian scientists under joint funding arrangements with the United Kingdom. A small annual grant has been made to the University of Adelaide for assistance in this field. The United Kingdom also conducts, at Woomera, a similar program with SKYLARK rockets.

Upper atmospheric research by means of balloons is conducted for Australian and American Universities using the balloon launching facilities made available under a co-operative agreement with the U.S. Atomic Energy Commission. *see*, also page 97.

### Astronomy

One of Australia's significant contributions to scientific endeavour at the international level has been in the fields of optical and radio astronomy. Largely by expertise in these areas Australia plays a significant role in international space research. Programs in optical astronomy have been in progress for many years. However, the growth of radio astronomy has occurred mainly since the 1939-45 War.

*Mount Stromlo and Siding Spring Observatory.* The astronomical research facilities of the Australian National University are located at Mount Stromlo (Canberra) and Siding Spring Mountain (Coonabarabran). The staff of the observatory are academic staff of the University's Institute of Advanced Studies and the permanent headquarters are located at Mount Stromlo, together with the library, laboratories and offices of the scientific staff. The older telescopes are located on Mount Stromlo, the newer ones on Siding Spring Mountain.

The observatory is the principal centre of optical astronomical research in the southern hemisphere. The research facilities are second only to the great observatories of the south-western United States, and because of their latitude observations can be made on parts of the sky permanently inaccessible to northern astronomers. The functions of the observatory are to carry out original investigations (both observational and theoretical) in astronomy and astrophysics, and to provide post-graduate training for future Australian astronomers.

The direction of the research conducted depends on the steadily widening interests of the staff and scholars as the subject of astronomy itself rapidly progresses. Areas of permanent interest to which the observatory has made important contributions include the evolution of stars and of stellar systems, the study of the Magellanic clouds and their globular star clusters, the chemical composition of the stars and the study of pulsating stars. The results of the work carried out at the observatory are published in international scientific periodicals, principally in the *Monthly Notices of the Royal Astronomical Society* and the *Astrophysical Journal*.

Mount Stromlo is situated at 35° 19' 16" south latitude and 149° east longitude at an altitude of 2,560 feet. It is the summit of a ridge of low hills in the Australian Capital Territory seven miles west of the city of Canberra. The first regular scientific work was started at this site in 1925, and the facilities were incorporated in the Australian National University in 1957. The main instruments are 30-inch, 50-inch, and 74-inch reflecting telescopes and associated spectrographs, photometers and spectral scanners.

The Siding Spring astronomical site was established in 1965. It is located at 31° 16' south latitude and 148° 41' east longitude at an altitude of 3,820 feet and occupies the summit of Siding Spring Mountain in the Warrumbungle Ranges, near Coonabarabran, New South Wales. This site has some of the best environmental conditions for astronomical research to be found anywhere in Australia—considerably better than at Mount Stromlo.

*The Anglo-Australian telescope project.* Early in 1967, the United Kingdom and the Australian Government agreed to collaborate in the construction and operation of a 150-inch optical telescope to be located at Siding Spring (and quite separate from the existing Australian National University facilities). The *Anglo-Australian Telescope Agreement Act* 1970 established the Anglo-Australian Telescope Board in February 1971 and this Board is the constructing and operating authority. The new instrument, which is scheduled to come into regular operation at the end of 1974, will be one of the largest optical telescopes in the southern hemisphere. It will play an important part in complementing the work of the existing 210 feet radio telescope located at Parkes (New South Wales).

### Agreement with United States of America

In the fields of civil science a formal agreement with the United States relating to scientific and technical co-operation was signed in October 1968. This agreement was to broaden and expand already existing co-operation between the Australian and American civilian scientific communities by providing additional channels for scientific collaboration in the civil field between the two countries. Since the signing of the agreement, co-operative research activities have been arranged in a number of fields including atmospheric sciences, arid lands research, problems of drug dependence, photosynthesis and biomedical research.

During 1972 three binational seminars were organised, and a collaborative research project in nuclear physics was also arranged under the Agreement. Planning for a number of other projects was well advanced at the end of 1972.

### Membership of the Association for Science Co-operation in Asia (ASCA)

The Association for Science Co-operation in Asia (ASCA) was formed in 1970 in consequence of an initiative taken by the Philippines. Australia participated in the organisational meeting in November 1970, and in the Association's first meeting in March 1972, both meetings were held in Manila. The second meeting was held in Tokyo in March 1973.

The following countries are at present members of ASCA: Australia, Bangladesh, India, Indonesia, Japan, Khmer Republic, Korea, Malaysia, New Zealand, Pakistan, the Philippines, Singapore, Sri Lanka, Thailand, Viet-Nam.

The objectives of this Association are to exchange information on national resources and research programs, to identify areas of common scientific and technological interest, and to examine means for providing solutions to priority problems on a bilateral or multilateral basis through the resources and facilities of existing inter-governmental agencies (e.g. UNESCO) or through other means. Improvement of the welfare of nations in the ASCA region through this close-co-operation is a major goal of the Association.

The Australian Government has declared its intention of participating fully in international science and technology, and it will assist the developing nations to raise the standards and scope of their scientific and technological research programs. Some of this contribution will be made under the general aegis of ASCA. The Australian Department of Science is the ASCA correspondent Science Agency for Australia.

### Funding of Scientific Research in Australia

A substantial proportion of the Australian Government's overall financial support for research in Australia is devoted to research carried out within the Government's own agencies. In addition, the Australian Government has established a number of fund granting schemes to promote research which is carried out in other sectors of the economy.

For example, support for research in the natural and social sciences and in the humanities is provided through the *Australian Research Grants Committee* which was established in 1965. The majority of the research supported under this scheme is carried out in the universities. Funds for allocation by the Committee are \$20 million for the 1973-75 triennium. Of this amount \$17 million is for upper atmosphere research, \$0.9 million for research in marine science, \$0.65 million for multi-disciplinary research and \$0.55 million for the purposes and operation of a high resolution nuclear magnetic resonance spectrometer. A brief description of the history and activities of the Australian Research Grants Committee is given on page 668.

For over 30 years Australian Government moneys have been allocated by the *National Health and Medical Research Council* for the support of medical research.

The Government, through the *Industrial Research and Development Grants Act 1967-1972*, provides a general incentive to Australian manufacturing and mining companies to increase the level of their expenditure on research and development, as a means of improving products and processes throughout Australian secondary industry.

Companies employing professional research staff are assisted in their own research and development, but the Act also provides for companies to contract research and development with approved research organisations.

Under the legislation, which is administered by the Australian Industrial Research and Development Grants Board, grants in excess of \$44 million had been paid to 931 Australian companies to 30 June 1972. Special taxation concessions may also apply to expenditure on buildings, plant and equipment used solely for scientific research purposes.

The Australian Government also contributes to *Research Trust Funds* which obtain portion of their revenue from levies on production by particular industries. Allocations are made from these trust funds for research in several primary industries.

A recently completed survey, project SCORE (Survey and Comparisons of Research Expenditure) was aimed at the collection of comprehensive information on financial and man-power resources devoted to scientific research and development in Australia. Data had been collected on the research and development (R and D) in both natural and social sciences from four sectors of the economy—government, business enterprise, higher education and private non-profit—for the year 1968-69. (The business enterprise sector had been dealt with by the then Department of Trade and Industry, the other sectors by the Department of Science). The survey provides information on the distribution of R and D expenditure between the fields of science, the source of funds for R and D, the nature of expenditure, as well as on man-power. The analysed and now published information is comparable with similar data collected by other countries and is expected to be of considerable value and importance to those concerned with the management and planning of science and technology in Australia.

## Scientific societies

### Royal Societies

The following table contains the latest available statistical information about the Royal Societies in each State.

ROYAL SOCIETIES, DECEMBER 1972

	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>
Year of charter . . . . .	1866	1859	1884	1880	1913	1844
Number of members . . . . .	353	616	280	300	265	583
Volumes of transactions issued(a) . . . . .	105	115	83	96	61	106
Number of books in library . . . . .	40,801	33,500	77,000	30,000	8,900	37,600
Societies on exchange list . . . . .	396	336	335	373	248	293

(a) Cumulative total.

### Australian Academy of Science

The Australian Academy of Science is the national institution representing science in Australia. Constituted by Royal Charter in 1954, the Academy promotes scientific knowledge and research, maintains standards of scientific endeavour and achievement in the natural sciences in Australia, and recognises outstanding contributions to the advancement of science. The Academy represents Australian science and scientists at the national and international level, co-ordinates Australian contributions to international co-operative scientific ventures, organises meetings of scientists, holds symposia, and arranges for visits of scientists from other countries to Australia, administers research fellowships provided by industry and prepares reports on matters of national importance.

Its Fellows (designated F.A.A.) are eminent in some branch of the physical or biological sciences in Australia, occupying professional positions in universities, the Commonwealth Scientific and Industrial Research Organization, other research organisations, and industry. A few places are reserved for Fellows who have rendered conspicuous service in the cause of science. No more than nine new Fellows are elected in any one year. Its present membership is 156 Fellows.

The Academy is financed by general and special purpose grants from the Commonwealth Government and from private sources. The academy is managed by an elected council comprising a president, treasurer, three secretaries and ten ordinary members who are drawn equally from the physical sciences and biological sciences. Chief administrative officer is the Executive Secretary, who is not a Fellow. Its conference centre and principal offices are in Canberra.

### Australian and New Zealand Association for the Advancement of Science (ANZAAS)

This Association was founded in 1887. Its objects are 'the advancement of science and scholarship through the communication of knowledge and the promotion of a spirit of co-operation among scientific workers, scholars and those in sympathy with science and scholarship generally, especially in Australia, New Zealand and the Australian Territories.' The 45th ANZAAS Congress was held in Perth, 13 to 17 August 1973. Further ANZAAS Congresses are set down for Canberra, January 1975, Hobart 1976, Melbourne 1977, New Zealand 1979 and Adelaide 1980.

The ANZAAS Central Office is in Sydney and Divisions operate in New South Wales, Victoria, South Australia, Western Australia, Papua New Guinea, the Australian Capital Territory, New Zealand and Queensland.

### Other scientific societies

There are more than 200 other learned societies devoted to the study of particular sciences. Some of these, including the Royal Australian Chemical Institute and the Institution of Engineers, Australia, are qualifying bodies, admission to which is by qualification only. Others, such as the Institute of Food Technologists, are open to any interested person. Some societies, such as the Australian Biochemical Society, have annual symposia of a very high standard. A great many of these bodies publish appropriate journals.

The Australian Academy of the Humanities is concerned with the advancement of scholarship and of interest in an understanding of Language, Literature, History, Philosophy and the Fine Arts.

The Academy of the Social Sciences in Australia encourages the advancement of the social sciences in Australia and acts as the Australian member of international non-governmental organisations concerned with social sciences.

## CHAPTER 20

# EMPLOYMENT AND UNEMPLOYMENT

Further detail on subjects dealt with this chapter is contained in the *Labour Report* (6.7) and other publications of this Bureau. For subjects relating to population censuses reference should be made to the series of mimeographed and printed publications listed in the *Publications of the Commonwealth Bureau of Census and Statistics* (1.8). Detailed information on the labour force and on employment and unemployment is contained in mimeographed bulletins *The Labour Force* (6.22) and *Employment and Unemployment* (6.4). Current information is also available in the *Monthly Review of Business Statistics* (1.4), the *Digest of Current Economic Statistics* (1.5), and the *Quarterly Summary of Australian Statistics* (1.3), and preliminary employment estimates are issued in a monthly statement *Employed Wage and Salary Earners* (6.12).

### THE LABOUR FORCE

This chapter contains a number of series relating to the labour force and its components. The labour force comprises two categories of persons: those who are employed and those who are unemployed. In the first category are included employers, self-employed persons, wage and salary earners, and unpaid helpers. Comprehensive details for each State and Territory and for Australia as a whole in respect of persons in the labour force, classified according to industry, occupation and occupational status (i.e. whether employers, self-employed persons, wage and salary earners or unpaid helpers) and personal characteristics such as age, sex, marital status and birthplace, are obtained only at a general census of population. Information about the labour force questions in the population census of June 1971 and a table showing the industry and occupational status of the labour force are given on this and the following two pages.

In the periods between population censuses, estimates of the labour force for the whole of Australia are obtained through the population survey, which is carried out by means of personal interviews at a sample of households throughout Australia in February, May, August and November each year (see pages 705–16). The survey provides, in addition to particulars of the demographic composition of the labour force, broad estimates of occupational status, occupation, industry and hours of work.

Detailed industry estimates for each State and Territory are obtained only in respect of wage and salary earners, through a monthly collection from employers. These estimates, which exclude employees in agriculture and private domestic service, are based on benchmarks derived from the population census, and other data but they do not agree exactly with census figures at relevant dates, partly because of a different method of allocating employees to industries. Further information about estimates of employed wage and salary earners, and in particular the reason for differences between estimates and census data, is given on pages 720–1.

### The population census

#### General

For the 1971 Census of Population and Housing the term 'labour force' is used in place of 'work force' in conformity with the Bureau's quarterly population survey and with international usage.

The labour force is defined as those persons aged 15 years and over who answered 'yes' to any of the following questions on the 1971 Census schedule:

- (a) Did this person have a full or part-time job, or business or farm of any kind last week?
- (b) Did this person do any work at all last week for payment or profit?
- (c) Was this person temporarily laid off by his employer without pay for the WHOLE of last week?
- (d) Did this person look for work last week?

Thus the labour force comprises those persons who worked, those who had a job from which they were temporarily absent, those who were temporarily laid off without pay for the whole of the reference week and those who did work, did not have a job and were actively looking for work.

Persons helping but not receiving wages or salary who usually worked less than 15 hours a week are excluded from the labour force. Bonded trainees (including trainee teachers) and cadets engaged in full-time study at educational institutions are also excluded, even though such institutions were conducted by their employer.

The unemployed members of the labour force are those persons who answered 'No' to questions (a) and (b) and 'Yes' to question (d) and those who answered 'Yes' to question (a), 'No' to question (b) and 'Yes' to question (c). Thus the unemployed consist of those who did no work during the reference week and either looked for work (having no job) or were temporarily laid off from a job.

This approach conforms closely to the recommendations of the Eighth International Conference of Labour Statisticians held in Geneva in 1954 and to the approach used at the 1966 Census.

According to the definition any labour force activity during the previous week, however little results in the person being counted in the labour force.

Thus many persons whose main activity is not a labour force one (e.g. housewife, full-time student) are drawn into the labour force by virtue of part-time or occasional labour force activity in the previous week. Answers to the questions on usual major activity indicate that there were substantially more of such persons at the Census of 1971 than at the Census of 1966 and that they were predominantly females.

On the other hand, the definition excludes persons who may frequently or usually participate in the labour force but who in the previous week happened to have withdrawn from the labour force. Answers to the question on usual major activity indicate that there were substantially more of such persons at the 1971 Census than at the 1966 Census, especially among males.

A similar definition of the labour force is used in the quarterly population sample survey conducted by the Bureau by the method of personal interview. This survey is used to measure changes in the labour force from quarter to quarter in the intercensal period.

Evidence from post-enumeration surveys and pilot tests indicates that the personal interview approach tends to identify a larger number of persons as in the labour force than does the filling in of the census questions on the schedule by the householder and that this tendency has increased between the 1966 and 1971 Censuses.

The above considerations should be borne in mind if comparisons of the total labour force or labour force participation rates are made between the 1966 and 1971 Censuses, or between the 1971 Census and the 1971 labour force quarterly estimates, or if the 1971 Census figures for wage and salary earners are compared with estimates of employed wage and salary earners shown on pages

#### Occupational status, employment status and labour force status

At the 1971 Census the terms *occupational status*, *employment status* and *labour force status* were used, and the relationship between these terms is illustrated by the following classifications.

<i>Occupational status</i>	<i>Employment status</i>	<i>Labour force status</i>
Employer . . . . .	Employed	In the labour force
Self-employed . . . . .		
Employee . . . . .		
Helper . . . . .		
Looking for first job . . . . .		
Other unemployed . . . . .	Unemployed	Not in the labour force
Not in the labour force . . . . .		
	Not in the labour force	Not in the labour force

Prior to the 1971 Census unemployed persons were classified according to their last job held. For the 1971 Census however, details of occupation and industry were sought only in respect of *employed* persons.

### Occupation

Occupation is defined as the type of work performed by an employed person and should not be confused with the type of productive activity, business or service carried out by the establishment in which a person works, e.g. a carpenter employed by a steel-making establishment would have the occupation of 'carpenter' and industry 'steel manufacture'; an electrician working at an oil refinery would have the occupation of 'electrician' but his industry would be that of 'oil refining' (see Industry).

In accordance with the International Standard Classifications of Occupations the structure of the Australian classification used for the 1971 and previous censuses is based primarily on the nature of the work done. The 1971 classification was prepared from the International Standard Classification of Occupations 1958 (revised 1966). The changes in the revised classification were given careful consideration in the preparation of the 1971 Australian classification. A number of new entries have been created to maintain convertibility to the international classification and others created to give more precise codes in certain occupation groups.

### Industry

Industry is defined as the branch of productive activity, business or service carried out by the establishment in which a person is employed.

For the 1971 Census the classification of industry was based on the *Australian Standard Industrial Classification* Preliminary Edition (ASIC). For the purposes of the population census an 'undefined' category was added, where appropriate, to individual divisions, subdivisions and groups of the classification to facilitate the coding of imprecise or generalised descriptions of industrial activities on the census schedules.

At the 1966 and previous Censuses, industry was determined from the respondent's own stated description of the 'kind of industry, business or service' in which he worked. With the adoption of ASIC for the 1971 Census comparability with previous censuses is greatly impaired, not only because of changes in the classification itself but also because in 1971 the industry coding in general was not determined from the stated description. Instead the name and address of the establishment at which the respondent worked, in general, provided the industry code for employees of that establishment. However, in a number of cases, owing to deficient replies concerning name and address of employer or because the establishment had not been pre-coded for industry, recourse still had to be made in coding to the respondent's own description of the industry in which he worked.

**EMPLOYED POPULATION(a), INDUSTRY BY OCCUPATIONAL STATUS  
AUSTRALIA, CENSUS 30 JUNE 1971**

Industry (division)	Occupational Status				Total	Population of total (per cent)

<b>Total employed . . . . .</b>	<b>3,586,526</b>	<b>1,653,902</b>	<b>5,240,428</b>	<b>100.00</b>

(a) Persons who, during the week prior to the census, were unemployed or who were classified as 'not in the labour force', are not included in this table.

### The population survey

The population survey is the general title given to the household sample survey carried out in February, May, August and November of each year in all States and Territories. Emphasis in the survey is placed on the collection of data on demographic and labour force characteristics, the principal survey component being referred to as the labour force survey. The remaining part of the population survey consists of supplementary collections which are carried out from time to time in conjunction with the labour force survey.

The population survey is based on a sample of dwellings selected by area sampling methods. Information is obtained each quarter from the occupants of selected dwellings by carefully chosen and specially trained interviewers during a four-week period on each occasion. Prior to the reselection of the sample in 1972 (using data from the 1971 Census of Population and Housing), the sample framework was extensively redesigned with a view to improving its efficiency, thus enabling economies to be made in the overall size of the sample. There are now about 27,000 households in the sample, representing two-thirds of one per cent of all households in Australia.

A description of the labour force survey and a selection of principal statistics obtained from it are given in this section. Data from supplementary surveys are published in mimeographed bulletins which are available on request. Results of the principal surveys have been published in earlier issues of the Year Book. This chapter contains the results of a survey of leavers from schools, universities or other educational institutions, February 1973. Results of a survey covering ex-service personnel and their dependants conducted in November 1971 are shown in Chapter 5, Repatriation, pages 112-4.

### The labour force survey

The labour force survey commenced in November 1960, and until November 1963 it was confined to the six State capital cities. The first survey for the whole of Australia was carried out in February 1964. Estimates are published quarterly in the mimeographed bulletin *The Labour Force* (6.20). More comprehensive statistics have been published in special bulletins entitled *The Labour Force* (6.22), covering the period 1964 to 1968, and single years thereafter.

The survey includes all persons fifteen years of age and over (including full-blood Aborigines), except members of the permanent armed forces, national servicemen enlisted in the Regular Army Supplement and certain diplomatic personnel customarily excluded from census and estimated populations.

The classification used in the survey conforms closely to that recommended by the Eighth International Conference of Labour Statisticians held in Geneva in 1954. In this classification, the labour force category to which an individual is assigned depends on his actual activity (i.e. whether working, looking for work, etc.) during a specified week, known as 'survey week,' which is the week

immediately preceding that in which the interview takes place. The interviews are carried out during a period of four weeks, so that there are four survey weeks in each of the months to which the survey relates. These survey weeks generally fall within the limits of the calendar month.

A person's activity during survey week is determined from answers given to a set of questions specially designed for this purpose. The principal categories appearing in the tables in this section are the employed and unemployed, who together constitute the labour force, and the remainder, who are classified as not in the labour force. Definitions of these categories are as follows:

- (i) *The labour force* comprises all persons who, during survey week, were employed or unemployed as defined in (ii) and (iii) below.
- (ii) *Employed persons* comprise all those who, during survey week,
  - (a) did any work for pay, profit, commission or payment in kind, in a job or business, or on a farm (including employees, employers and self-employed persons), or
  - (b) worked fifteen hours or more without pay in a family business (or farm), or
  - (c) had a job, business or farm, but were not at work because of illness, accident, leave, holiday, production hold-up due to bad weather, plant breakdown, etc., or because they were on strike.
- (iii) *Unemployed persons* comprise all those who, during survey week, did no work at all, and who either,
  - (a) did not have a job or business and were actively looking for work (including those who stated that they would have looked for work if they had not been temporarily ill or believed no work was available, or had not already made definite arrangements to start work in a new job after survey week); or
  - (b) were laid off from their jobs without pay for the whole week.

A person who either lost his job or was laid off during survey week, but did some work at his job during that week, is classified as employed.

- (iv) *Persons not in the labour force* are all those who, during survey week, were not in the categories 'employed' or 'unemployed' as defined. This category therefore includes persons without a job, business or farm who were not actively looking for work, and who, during survey week, were either keeping house (unpaid), attending an educational institution (e.g. school or university), retired or voluntarily idle, permanently unable to work or inmates of institutions. A person who worked less than fifteen hours without pay in a family business during survey week is also classified as not in the labour force.

Figures of total population fifteen years of age and over for each sex are derived from the official population estimates, which in turn are based on results of population censuses. Figures of marital status and all labour force characteristics of these populations are derived from the sample survey data. For this and other reasons, including differences in timing, methods of collection (personal interview in the survey, self-enumeration in the census) and, in some cases, concepts and definitions, the survey estimates of marital status and labour force characteristics may not agree closely with the corresponding census figures.

Estimates of total population, revised on the basis of the 1971 Census of Population, indicate that the estimates that were used for the population surveys in mid-1971 were, overall, some 55,000 persons too high. The revised estimates classified by age, which are necessary to enable the revision of labour force estimates to be carried out, are not yet available. Caution should be exercised in using the estimates in this Year Book as indicators of long-term change. A preliminary assessment of the effect of the revised population estimates indicates that it will be necessary to reduce the level of the estimated labour force from mid-1971 onwards by about 28,000 persons (mostly males). Successively smaller revisions will be made to the estimates for earlier periods back to mid-1966.

Industry estimates published in previous issues of the Year Book were based on the Classification and Classified List of Industries used at the 1961 and 1966 population censuses. Industry is now coded by use of the Australian Standard Industrial Classification (ASIC). Industry estimates shown in this issue for May 1973 are, therefore, not strictly comparable with those shown in earlier issues.

**Reliability of the estimates**

Since the estimates which appear in the following tables are based on a sample, they may differ from the figures that would have been obtained from a complete census using the same questionnaires and procedures. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample, and not the whole population, was enumerated. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained from a comparable complete enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors.

Space does not allow for the separate indication of the standard errors of all estimates in this section. A table of standard errors which is intended to be of general application is therefore given below.

The standard errors in the table are averages based on calculations for a limited number of surveys and are also averages over a wide range of labour force characteristics. These figures thus give not a precise measure but an indication of the magnitude of the standard error of any particular estimate for any particular survey. An example of the use of the table is as follows: if the estimate obtained from the sample is 100,000 and the standard error is 3.1 per cent of the estimate, i.e. 3,100, there are about two chances in three that the true figure is within the range 96,900 to 103,100 and about nineteen chances in twenty that this figure is within the range 93,800 to 106,200.

**STANDARD ERRORS OF QUARTERLY ESTIMATES**

<i>Size of estimate (persons)</i>	<i>Approximate standard error of estimates</i>	
	<i>Persons</i>	<i>Percentage of estimate</i>
4,000	800	20.0
5,000	900	18.0
10,000	1,180	11.8
20,000	1,560	7.8
50,000	2,300	4.6
100,000	3,100	3.1
200,000	4,200	2.1
500,000	6,000	1.2
1,000,000	8,000	0.8
2,000,000	10,000	0.5

The standard errors of estimates relating to agricultural employment are generally somewhat higher than the standard errors of other estimates of the same magnitude. Estimates for females also tend to have higher standard errors relative to estimates of equivalent size for males in similar employment categories.

The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the denominator. Percentages quoted in the following tables, and any other percentages calculated from figures shown, have generally somewhat lower proportional standard errors than have the estimates which form the numerators of the percentages, particularly where the percentages are large.

As the standard errors in the table show, the smaller the estimate the higher is the relative standard error. Very small estimates would thus be subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the following tables, estimates less than 4,000 have not been shown. Although figures for these small components can be derived by subtraction, they should not be regarded as reliable.

The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

**CIVILIAN POPULATION 15 YEARS OF AGE AND OVER(a), BY EMPLOYMENT STATUS  
AUSTRALIA**

May—	Employed(b)			Unemployed(b)		Total labour force(b)		Not in labour force(b) (c'000)	Civilian population aged 15 and over (a) (c'000)

(a) For a note on persons excluded see explanatory notes on page 705. (b) For definitions see page 706. (c) The labour force in each group as a percentage of the civilian population aged 15 years and over in the same group (labour force participation rate). (d) Never married, widowed and divorced.

NOTE. Discontinuity indicated by horizontal line. At the 1971 population census, trainee teachers were for the first time classified as not in the labour force. They have been likewise excluded from the labour force estimates from August 1971. In consequence there is now a break in the labour force series between May and August 1971, the numbers of males and females excluded being approximately 7,000 and 17,000 respectively.

Discontinuity between 1972 and 1973 has been caused by a change in the basis of industry coding. Industry is now being coded according to the Australian Standard Industrial Classification (ASIC). See page 706.

## LABOUR FORCE PARTICIPATION RATES

(THE LABOUR FORCE IN EACH GROUP AS A PERCENTAGE OF THE CIVILIAN POPULATION AGED  
15 YEARS AND OVER IN THE SAME GROUP)

## UNEMPLOYMENT RATES

(THE UNEMPLOYED IN EACH GROUP AS A PERCENTAGE OF THE CIVILIAN LABOUR FORCE  
IN THE SAME GROUP)

(a) Never married, widowed and divorced.

(a) Aged 15 years and over. (b) For definitions see page 706. (c) See note (c) to table on page 708. Persons in institutions for whom, for the purpose of the survey, the institution was regarded as their usual place of residence, have been omitted from the civilian population since it is not practicable to ascertain the birthplace or the year of arrival in Australia for such persons.

\* Estimates less than, or based on a figure less than, 4,000, are not published because they would be subject to sampling variability too high for most practical purposes. Although figures for these small components can be derived by subtraction, they should not be regarded as reliable.

(a) Civilians 15 years of age and over. For definitions see page 706. (b) Actual hours worked during survey week, not hours paid for. The figures may be affected by public holidays, leave, absenteeism; temporary absence from work due to sickness, accidents, and industrial disputes; and work stoppages due to bad weather, plant breakdown, etc. (c) Excludes persons laid off for the whole of survey week without pay; these persons are classified as unemployed. (d) Persons with jobs who did not work during survey week have been included in the calculation of average hours worked. When recording hours worked, fractions of an hour are disregarded. This procedure results in slight lowering of the average hours figures. (e) Never married, widowed and divorced.

(a) Comprises inmates of gaols, patients in hospitals, sanatoria, etc., for whom, for the purpose of the survey, the institution was regarded as their dwelling. (b) Never married, widowed and divorced.

\* Less than 4,000. See footnote \* on page 714.

NOTE. For an explanation of the discontinuity in the series (indicated by horizontal line), see NOTE on page 708.

## Leavers from schools, universities or other educational institutions

Surveys based on the population survey sample (*see* page 705) have been carried out in February of each year since 1964 in order to obtain information about persons aged 15 to 24 who had attended full time at a school, university or other educational institution at some time during the previous year. Estimates for the years 1964 to 1972 have been published in previous issues of the Year Book. Estimates for February 1973 are shown below.

The main survey questions were designed to distinguish among persons who had attended full time at a school, university or other educational institution at some time in the previous year, those who were intending to return to full-time education and those who were not returning to full-time education, the latter being described in this section as 'leavers'.

The estimates relate to all persons in the age group 15 to 24 years, except members of the permanent armed forces, national servicemen enlisted in the Regular Army Supplement and certain diplomatic personnel customarily excluded from census and estimated populations. Certain categories of persons covered by the survey were not asked the survey questions. These comprised persons who were patients in hospitals and sanatoria, or inmates of gaols, reformatories, etc., and for whom, for the purposes of this survey, the institution was regarded as their dwelling, and persons reported as permanently unable to work. An estimate of the total number of such persons is shown in the first table in this section.

All persons covered by the survey were asked questions about their occupational status and those in the labour force were further questioned about their occupation and industry. Occupational status is shown for 'leavers', but not for persons returning to full-time education. Although many of these latter persons were in the labour force at the time of the surveys, their numbers would not give a useful indication of the extent of vacation employment because, in the years 1971 and 1972, the 'survey week' extended from the second week in February to the first week in March. Hence, between the first and last survey weeks, the level of vacation jobholding would have decreased substantially.

For further details reference should be made to the periodic mimeographed bulletins *Survey of Leavers from Schools, Universities or Other Educational Institutions* (6.9).

### CIVILIANS AGED 15 TO 24 YEARS(a), BY ATTENDANCE OR NON-ATTENDANCE FULL TIME AT A SCHOOL, UNIVERSITY, ETC, IN THE PREVIOUS YEAR AUSTRALIA, FEBRUARY 1973 (<sup>000</sup>)

### Survey of multiple jobholding, May 1971

In May 1971 a survey, based on the quarterly population survey (see page 705), was conducted throughout Australia in order to obtain information about the nature and extent of multiple jobholding. Results of the survey were shown in Year Book No. 58, pages 707-10. The results of earlier surveys of multiple jobholding, conducted in August 1966 and August 1967, were given in Year Book No. 54, pages 1162-6.

### EMPLOYED WAGE AND SALARY EARNERS

Estimates of wage and salary earners in this issue are based on data derived from the 1966 population census. Because of the adoption of a new definition of the labour force in the 1966 census these estimates are not comparable with those for periods before June 1966.

Detailed industry figures for each State and Australia, on the new basis, and a revised government employment series, have been published in two mimeographed bulletins entitled *Employed Wage and Salary Earners* (Reference No. 6.23), covering the period June 1966 to June 1971. These bulletins contain estimates for each month of the period covered. Estimates for current months are published in *Employment and Unemployment* (Reference No. 6.4).

To determine each person's labour force status at the 1966 census the following questions were asked in respect of all persons fifteen years of age and over.

'Did the person have a job or business of any kind last week (even though he may have been temporarily absent from it)?'

'Did the person do any work at all last week for payment or profit?'

Provided he had not been temporarily laid off by his employer without pay for the whole of the week, a person who answered 'yes' to either of these questions was classified as employed. Persons in this category who were stated to be 'working for wages or salary', except members of the defence forces, persons employed in agriculture or private domestic service, and crews of overseas ships have been included in the benchmarks for the current series. For further details see Year Book No. 58, pages 691-2.

The data needed to derive the estimates for periods subsequent to the benchmark date (June 1966) are obtained from three main sources, namely, (a) current payroll tax returns; (b) current returns from government bodies; and (c) some other current returns of employment (e.g. for hospitals); the balance, i.e. unrecorded private employment, is estimated. Month-to-month changes shown by current returns are linked to the benchmark data to derive the monthly estimates. At June 1966, recorded employment obtained from the foregoing sources accounted for about 85 per cent of the total number of employees in the industries covered, as determined by the census.

The figures in this section generally relate only to civilian wage and salary earners, not the total labour force. They therefore exclude employers, self-employed persons and unpaid helpers. Also excluded, because of the inadequacy of current data, are employees in agriculture and private domestic service, and some part-time employees. Defence forces are included in the table on page 722.

The June 1966 figures were derived from particulars recorded for individuals on population census schedules, while the estimated monthly changes are derived mainly from reports supplied by employers, relating to enterprises or establishments. Because the two sources differ in some cases in the reporting of industry, the industry dissection of the census totals has been adjusted to conform as closely as possible to an establishment reporting basis. For this reason, and because crews of overseas ships were excluded from the benchmark figures, the estimates for June 1966 in this chapter differ from those published in the series of census bulletins (Nos. 1.6, 2.6, etc.) which show particulars of the occupational status and industry of the population in each State and Territory, and in other publications which contain population census results. The industry classification used throughout the series is that of the population census of June 1966.

Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

Prior to 1 September 1971, payroll tax returns were lodged by all employers paying more than \$400 a week in wages (other than certain Commonwealth Government bodies, religious and benevolent institutions, public hospitals and other similar organisations specifically exempted under the *Pay-roll Tax Assessment Act 1941-1969*). Since that date, when the authority for collection of payroll tax passed from the Commonwealth to the States, State and local government bodies not engaged in business activity have generally been exempted.

Particulars of employment obtained from other collections, such as the annual manufacturing census and censuses and sample surveys of retail establishments, are used to check and where desirable to revise estimates in relevant sections. Some figures are subject to further revision as the results of later censuses and surveys become available.

Although the series measure reasonably well the short-term trends in employment in the defined field, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and payroll data, and changes in such factors as labour turnover, multiple jobholding and part-time working all affect the trend over longer periods.

As results from each successive population census become available it is customary to derive from them new benchmarks for the monthly employment series, and to revise the published estimates for all periods subsequent to the date of the previous census. Evidence from census post-enumeration surveys indicates that the filling in of census questionnaires by householders tends to identify a smaller number of persons as being in the labour force than do other methods of measurement (e.g. household surveys conducted by personal interview), and that components of the total labour force, such as employed wage and salary earners, tend to be affected in the same way. This tendency increased between the 1966 and 1971 censuses.

Comparison between census results and the monthly estimates of employed wage and salary earners is affected not only by the discrepancy referred to above but also by the accumulation of errors in the intercensal employment estimates and differences in the methods of industry classification. The Australian Standard Industrial Classification (ASIC) was adopted in coding the industry of the population at the 1971 census, whereas in the monthly estimates the 1966 census classification is still used. (See above.)

A revision of the employed wage and salary earner series, based on new benchmarks derived from census and other relevant data, is in course of preparation and is expected to result in reduced levels for current estimates.

NOTE. At the June 1971 population census, trainee teachers (enrolled at government teachers colleges and in some cases enrolled also at other institutions) were for the first time classified as not in the labour force. The employment estimates for that month include approximately 7,000 male and 17,000 female trainees. For subsequent periods trainee teachers have been excluded from the estimates.

## COMMONWEALTH EMPLOYMENT SERVICE

Statutory warrant for the Commonwealth Employment Service (C.E.S.) is to be found in the *Re-establishment and Employment Act* 1945–1966 (sections 47 and 48). In brief, the main functions of the C.E.S. are to assist people seeking employment to obtain positions best suited to their training, experience and qualifications; and to assist employers seeking labour to obtain employees best suited to their needs. The organisation and functions of the C.E.S. conform to the provisions of the Employment Service Convention, 1948, of the International Labour Organisation, which was ratified by Australia in December 1949. In addition, C.E.S. practices accord substantially with the provisions of the I.L.O. Employment Service Recommendation, 1948.

The C.E.S. functions on a decentralised basis within the Employment and Training Division of the Department of Labour. The Central Office is in Melbourne and there is a Regional Office in the capital city of each State. There are 167 Employment Offices in suburban and the larger provincial centres and 153 agents in the smaller country centres. The Employment Offices are distributed as follows: New South Wales, 59; Victoria, 41; Queensland, 27; South Australia, 19; Western Australia, 16; Tasmania, 5. The New South Wales figure includes one office in Canberra while the South Australian figure includes three in the Northern Territory.

Specialised facilities are provided for young people, persons with physical and mental handicaps, ex-members of the defence forces, migrants, rural workers, and persons with professional and technical qualifications. The C.E.S. provides vocational guidance free of charge in all States and has a staff of qualified psychologists for this function. Guidance is available to any person, but is provided particularly for young people, ex-servicemen and the handicapped. In New South Wales the C.E.S. provides vocational guidance to adults, including ex-servicemen and the handicapped, while the State Department of Labour and Industry provides a vocational guidance service within the school system and for young persons leaving school.

All applicants for unemployment benefits under the *Social Services Act* 1947–1973 must register at an Office or agency of the C.E.S., which is responsible for certifying whether or not suitable employment can be offered to them. The C.E.S. is responsible for placing in employment migrant workers sponsored by the Commonwealth under the Commonwealth Nomination and similar schemes. This includes arranging for them to move to their initial employment and advising the Department of Immigration of the hostels to which migrants should be allocated on arrival. Assistance in obtaining employment is provided to other migrants as required. Since 1951 it has been responsible for recruiting Australian experts for overseas service under the Colombo Plan and the United Nations Expanded Programme of Technical Assistance (now replaced by the U.N. Development Programme). The principal spheres in which experts have been supplied are agriculture, education, engineering, geology, health, and economic and scientific research and development.

In association with placement activities, regular surveys of the labour market are carried out and detailed information is supplied to interested Commonwealth and State Government departments and instrumentalities and to the public. Employers, employees and other interested persons are advised on labour availability and employment opportunities in various occupations and areas and on other matters concerning employment.

The Service completed its twenty seventh year of operation in May 1973. During 1972 there were 1,470,934 applicants who registered for employment, of whom 1,004,006 were referred to employers and 557,498 placed in employment. New vacancies notified numbered 797,990.

**Persons registered for employment**

The following table shows the number of persons who claimed, when registering for employment with the Commonwealth Employment Service, that they were not employed and who were recorded as unplaced. The figures include those persons who were referred to employers and those who may have obtained employment without notifying the C.E.S. They include persons in receipt of unemployment benefit (see the chapter Welfare Services).

## CHAPTER 21

# MANUFACTURING INDUSTRY

### Introduction

An historical summary of the development of the manufacturing industry in Australia since 1901 is contained in earlier issues of the Year Book (*see* No. 51, pages 143-4).

#### Decentralisation and manufacturing industries

The decentralisation of secondary industries, and the steps taken by Commonwealth and State Governments towards its development, are referred to in previous issues of the Year Book (*see* No. 51, page 144).

#### Bounties on manufacture

Bounties are paid by the Commonwealth Government to encourage local manufacture of certain products. The statutory provisions usually fix a term of operation of the bounty, provide for payment at a rate varying according to changes in the corresponding customs duty, specify the annual maximum amount of bounty payable, and require the bounty to be withheld or reduced if a manufacturer's net profit in production of the commodity exceeds a certain rate, or if rates of wages and conditions of employment in production of the commodity do not conform to prescribed standards. (*See* Chapter 18, Public Finance for products on which bounties are paid).

#### Standardisation

*The Commonwealth Scientific and Industrial Research Organization* has functions concerned with the improvement of efficiency in industrial operations. For further particulars *see* the chapter Education, Cultural Activities, and Research of this Year Book.

*The Standards Association of Australia* is the organisation responsible for industrial standardisation on a national basis. It issues Australian standards for materials and products and standard codes of practice.

Formed as the Australian Commonwealth Engineering Standards Association in 1922, it was reconstituted as the Standards Association of Australia in 1929, and was incorporated by Royal Charter in 1950. It is an independent body having the full recognition and support of the Commonwealth and State Governments and of industry. Approximately half its funds are provided by Commonwealth Government grant, the remainder coming primarily from membership subscriptions and from sale of publications. Organisations, companies, and individuals are eligible for subscribing membership.

The Association is controlled by a Council comprising representatives from Commonwealth and State Governments and their departments, from associations of manufacturing and commercial interests, and from professional institutions. Standards are prepared by committees composed of expert representatives from the interests associated with the subjects under consideration. This assistance is on a voluntary basis.

Preparation of standards is undertaken in response to requests from industrial associations or firms or from government departments. Standards may relate to one or more of several aspects of industrial practice such as terminology, test methods, dimensions, specifications of performance and quality of products, and safety or design codes. In general, standards derive authority from voluntary adoption based on their intrinsic merit, but in special cases where safety of life or property is involved, they may have compulsory application through statutory reference.

The Association is the owner of a registered certification trade mark covering conformity of products to standards. Manufacturers of products covered by Australian standards may obtain a licence to use the Australian Standard Mark, under conditions established by the Association.

The Association has international affiliations and is a member, representing Australia, of the International Organization for Standardization (ISO) and of the International Electrotechnical Commission (IEC). Close links are maintained with overseas standards organisations, and the Association acts as Australian agent for the procurement of ISO and IEC publications and the standards of other countries.

The Association has two specialised libraries, one in Sydney and one in Melbourne, containing the national standards of all countries with standards organisations. These libraries provide necessary material for committee work and a free information service to those concerned with standards.

The headquarters office of the Association is in Sydney, and there is a major branch office in Melbourne. Branch offices are located also in other capital cities and at Newcastle, New South Wales.

*The National Association of Testing Authorities* organises testing facilities throughout Australia to serve private and governmental needs.

Membership is open to authorities whose testing laboratories conform to the standards of staffing and operation defined by the Association. Testing authorities may register their laboratories voluntarily. The Association assesses the competence of the laboratories and ensures that their standards of competence are maintained. Certificates of test issued by registered laboratories may be endorsed in the name of the Association. NATA endorsed test certificates are generally accepted by governmental, industrial and commercial interests.

Laboratories are registered for performance of specific tests in the fields of metrology, mechanical testing, electrical testing, optics and photometry, non-destructive testing, heat and temperature measurement, chemical testing, biological testing, and acoustic and vibration measurement. In June 1973, 925 laboratories held NATA registration. A further 41 laboratories had been nominated for registration.

*The Industrial Design Council of Australia* was established in June 1958 for the purpose of encouraging better design in Australian-made goods and fostering an appreciation of good design throughout the community. The Council is fully representative of industry, commerce and government, together with designers and educationists. Its activities are financed by donations from industry and commerce, and by Commonwealth and State grants. IDCA has established Australian design centres in Adelaide, Melbourne and Sydney. These centres display Australian products of approved design and present changing exhibitions relating to design in manufactured articles. IDCA is also responsible for the Australian design index which provides a detailed, illustrated record of well-designed Australian products.

The design delegate scheme enables regular contact to be maintained with senior executives of manufacturing companies, departmental officers and designers wishing to participate actively in IDCA's programme of lectures, information, and guidance on all aspects of industrial design. Services to design delegates are administered by IDCA through its design centres.

A record of designers has been set up to register information about industrial designers and their work. The Council, which has its headquarters in Melbourne, is also concerned with raising the standard of training in industrial design in co-operation with education authorities. For further particulars see Year Book No. 51, page 145.

#### **Overseas participation in Australian manufacturing industry**

For further particulars, see Year Book No. 51, pages 143-4.

### **Manufacturing industry statistics**

#### **Manufacturing industry statistics from 1901 to 1967-68**

A series of substantially uniform statistics exist from 1901 up until 1967-68 when the framework within which manufacturing statistics were collected was changed. The following table contains a summary of statistics on manufacturing activities in Australia over that period. More detailed manufacturing statistics in respect of this period have been included in Year Book, No. 57, pages 721-9 and earlier issues.

## MANUFACTURING INDUSTRY: AUSTRALIA(a), 1901 TO 1967-68

Year	Facto- ries	Employ- ment(b)	Salaries and wages paid(c)	Value of—		Production (d)	Land and Buildings (e)	Plant and Machinery (e)
				Materials and fuel used	Output			
	No.	'000	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
1901 .	11,143	198	n.a.	n.a.	n.a.	n.a.	n.a.	n.a.
1911 .	14,455	312	55,056	163,526	266,044	102,518	65,402	63,032
1920-21 .	17,113	367	125,864	427,118	647,986	220,868	121,662	137,310
1930-31 .	21,751	339	124,910	344,978	581,598	236,620	224,422	248,996
1940-41 .	27,300	650	275,838	773,762	1,289,590	515,828	288,188	322,712
1950-51 .	43,147	969	983,436	2,613,926	4,301,670	1,687,744	605,570	673,230
1960-61 .	57,782	1,145	2,289,230	6,115,930	10,465,765	4,349,835	2,389,140	2,785,565
1963-64 .	59,375	1,210	2,651,620	7,372,682	12,642,686	5,270,003	3,204,685	3,480,673
1964-65 .	61,042	1,269	2,993,709	8,140,600	14,037,355	5,896,754	3,505,859	3,766,253
1965-66 .	61,686	1,294	3,162,769	8,437,958	14,689,819	6,251,861	3,776,590	4,154,652
1966-67 .	62,500	1,309	3,407,683	9,015,844	15,892,845	6,877,001	4,061,193	4,706,843
1967-68 .	62,954	1,331	3,665,902	9,663,217	17,094,070	7,430,853	4,303,156	4,962,203

(a) Before 1 July 1964, excludes Northern Territory and Australian Capital Territory. (b) 1901 and 1911—average employment during period of operation. Later years relate to average employment over whole year. Working proprietors are included in all years. (c) Excludes amounts drawn by working proprietors. (d) Value added in process of manufacture (i.e. value of output less value of materials and fuel, etc. used). (e) Depreciated or book values at 30 June. Includes estimated values of rented premises and machinery.

## Manufacturing industry statistics from 1968-69

As from the year ended June 1969, the Censuses of Manufacturing, Electricity and Gas have been conducted within the framework of the integrated economic censuses which include the Censuses of Mining, Retail Trade and Selected Services, and Wholesale Trade. As a result manufacturing industry statistics for 1968-69 and subsequent years are not directly comparable with previous years. The electricity and gas industries, which were previously included in the Annual Factory Census, were the subject of separate censuses, details of which are given on page 736. The integration of these economic censuses was designed to increase substantially the usefulness and comparability of economic statistics collected and published by the Bureau and to form a basis for the sample surveys which supply current economic statistics from quarter to quarter, particularly those which provide data for the quarterly national income and expenditure estimates.

The economic censuses of Manufacturing, Mining and Retail Trade previously conducted in Australia were originally designed and subsequently developed primarily to provide statistics for particular industries on a basis which would best suit the requirements of users interested in statistics of those industries. More recently there has been a growth of interest in statistics describing activity in the economy as a whole—reflected, for example, in the development of employment and earnings statistics, surveys of capital expenditure and stocks and the whole field of national accounts statistics. For such purposes statistics derived from economic censuses in the past have had serious limitations despite the fact that they covered a broad area of the whole economy. Because of the special-purpose nature of each of the censuses, there were no common definitions of data, there was no common system of reporting units, and, as a standard industrial classification was not used for these censuses, industry boundaries were not defined in ways which would avoid overlapping or gaps occurring between the industrial sectors covered. For these reasons, direct aggregation and comparison of statistics from different censuses were not possible.

The integration of these economic censuses meant that for the first time they were being collected on the basis of a common framework of reporting units and data concepts and in accordance with a standard industrial classification. As a result, the statistics for the industries covered by the censuses are now provided with no overlapping or gaps in scope, and in such a way that aggregates for certain important economic data such as value added, employment, wages and salaries, fixed capital expenditure and stocks can be obtained on a consistent basis for all sectors of the economy covered by the censuses.

For the integration of the various censuses it was necessary to undertake three major developments:

- (a) The census units for which the statistics were to be collected (factories, mines, shops, etc.) had to be defined and identified in consistent ways and recorded in a central register, together with identifying data about the businesses owning and operating them.
- (b) A standard industrial classification had to be adopted so that the census units could be classified in consistent ways and to enable the boundaries of the various economic censuses to be determined without gaps or overlapping between them.
- (c) In order to bring the items of data to a consistent basis of definition in all censuses, it was necessary to revise all the forms used in previous censuses.

The standardisation of census units in the integration of economic censuses means that the basic census unit (the establishment), in general, now covers all the operations carried on under the one ownership at a single physical location. The manufacturing establishment is thus one predominantly engaged in manufacturing but the data supplied for it now cover (with a few exceptions) all activities at the location. Previously, the manufacturing establishment covered only a specified manufacturing activity primary to one class of industry. It now covers, in addition, subject to certain exceptions mentioned below:

- (a) Any other manufacturing activity (i.e. production of goods primary to another class of industry).
- (b) Any selling and distribution activities connected with the products manufactured.
- (c) Any non-manufacturing activity (e.g. merchandising of goods not manufactured by the establishment; extraction of raw materials for use by the establishment).

The exceptions in general relate to locations where the subsidiary activities (in terms of gross value) exceed \$1 million, which are treated for statistical purposes as two or more establishments corresponding to the various kinds of activity carried on.

The establishment statistics also include data relating to separately located administrative offices and ancillary units serving the establishment and forming part of the business (enterprise) which owns and operates the establishment. These units were formerly excluded from the manufacturing census. They are units such as head offices, storage premises and manufacturers' sales branches or sales offices (except those of the kind which distribute to customers from stocks held by such branches or offices, which are treated as establishments in the Wholesale Census).

The Australian Standard Industrial Classification (ASIC), described in the Bureau publication *Australian Standard Industrial Classification (Preliminary Edition)*, 1969, Vol. 1, defines the industries in the economy for statistical purposes, thus permitting the scope of the different economic censuses to be specified without gaps or overlapping between them. It also sets out standard rules for identifying the statistical units (e.g. establishments) and for coding them to the industries of the classification. This classification is broadly convertible to the International Standard Industrial Classification adopted by the United Nations Statistical Commission. The adoption of the ASIC has resulted in changes in scope between the integrated economic censuses introduced in 1968-69 and the individual economic censuses conducted in previous years. The main changes in scope in the manufacturing census apart, from providing for a separate census for electricity and gas, are as follows.

- (a) Establishments mainly engaged in the following activities, previously included in manufacturing censuses, are excluded as from 1968-69: motor vehicle repairs but not engine reconditioning; repair and servicing of agricultural machinery; dry-cleaning, laundering and clothes dyeing services; watch, clock and jewellery repairing; boot and shoe repairing; tyre retreading and repairing; custom dressmaking and tailoring (including clothing repair and alterations); installing and repairing of blinds and awnings, making up and installing of curtains; and repair of domestic appliances. Establishments mainly engaged in these activities are now included in the periodic Retail Trade or Wholesale Trade Censuses.
- (b) Establishments mainly engaged in non-manufacturing activities but which also carry out, as a subsidiary activity, some manufacturing activities, and which in respect of those manufacturing activities, were previously included in the manufacturing census are excluded as from 1968-69 unless such establishments have manufacturing activities of a gross value of \$1 million or more.
- (c) Establishments mainly engaged in the following activities, previously excluded in most States from manufacturing censuses, are included as from 1968-69: slaughtering, milk treatment, and publishing.

An indication of the effect of the changes referred to above can be gained from the following comparison. In the 1967-68 census there were approximately 62,600 manufacturing establishments

(excluding electricity and gas establishments), with employment of 1,276,000. Of these, approximately 35,400, with employment of 1,097,000 (but *see* footnote (b) to the following table) would have been included in the 1967-68 census if ASIC had been used. Figures for the individual States and Territories are given below.

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Approximate number of manufacturing establishments—									
1967-68 census	24,900	18,000	6,100	6,200	5,300	1,800	180	240	62,600
1967-68 census if ASIC had been used(a)	13,800	11,400	3,500	3,000	2,500	960	70	100	35,400
Approximate number of employees (thousands)—									
1967-68 census	512	433	114	116	63	34		5	1,276
1967-68 census if ASIC had been used(b)	445	376	95	100	51	27		3	1,097

(a) Excludes the establishments referred to in (c), in the paragraph above. (b) These figures relate to employment as defined for the 1967-68 and previous year censuses. They thus exclude employment at the establishments referred to in (c) in the paragraph above, sales and distribution employees, employees connected with non-manufacturing activities and employees at separately located administrative offices and ancillary units serving manufacturing establishments. The figures, therefore, are not directly comparable with those for 1968-69 and 1969-70, which include the aforementioned employees.

The third step in integrating the censuses, whereby the items of data on the census forms were standardised for all census sectors, has meant changes in the content of the statistics. For example, the value of 'turnover' is now collected instead of the 'value of output' at the factory, and purchases and selected expenses are collected as well as the value of specified materials, fuels, etc., used. However the underlying concept of 'value added,' is similar to the former concept 'value of production', even though its method of derivation is different. Value added, the basic measure of the establishment's contribution to total production, is now calculated as turnover less purchases and transfers in (from other establishments of the enterprise), plus increase (or less decrease) in stocks. In the past the corresponding item, value of production, was obtained by deducting the value of materials, fuels, etc., used from the value of output at the factory. A detailed comparison of the method of derivation is shown in the following table.

<i>Value of production</i> 1967-68	<i>Value added</i> as from 1968-69
Selling value at works, exclusive of all delivery costs or charges, of goods manufactured, treated or worked up during the year, including by-products, <i>plus</i> Value of other work done, . . . such as repairing and making up for customers, etc.	Sales, and transfers out (to other establishments of the enterprise), of goods manufactured by the establishment, <i>plus</i> Sales and transfers out of goods not manufactured by the establishment, <i>plus</i> Bounties and subsidies on production, <i>plus</i> All other operating income, <i>plus</i> Capital work done for own use, or for rental or lease
<i>Equals:</i> Value of output	<i>Equals:</i> Value of turnover <i>Plus:</i> Closing stocks <i>Less:</i> Opening stocks
<i>Less—</i> Value of materials used Power, fuel and light used Water used Lubricating oils used Repairs, etc. Containers used	<i>Less—</i> Purchases and transfers in of materials, electricity, fuels, containers, etc. Purchases and transfers in of goods for resale Charges for commission and subcontract work Repair and maintenance expenses Outward freight and cartage, motor vehicle running expenses, sales commission payments
<i>Equals:</i> Value of production	<i>Equals:</i> Value added

Even though the concept of value added is similar to value of production, direct comparison of 1968-69 and previous figures will not be possible because of the change in census units already mentioned which has resulted in the value added for the whole establishment being reported, not merely the value added for the manufacturing process. Comparison is also affected, of course, by the change in the scope of the manufacturing census due to the adoption of ASIC.

For a more detailed description of the Integrated Economic Censuses reference should be made to Chapter 31, Year Book No. 56.

## Summary of operations

The following table shows the summary of operations for manufacturing establishments.

**MANUFACTURING ESTABLISHMENTS—SUMMARY OF OPERATIONS, BY INDUSTRY  
SUB-DIVISION: AUSTRALIA, 1969-70 AND 1971-72**

Industry sub-division	ASIC code (a)	Number of estab- lish- ments opera- ting at end of June	Persons employed(b)			Wages and salaries \$m	Turn- over \$m	Stocks at 30 June		Pur- chases, trans- fers in and selected expen- ses \$m	Value added \$m	Fixed capital expen- diture(c) \$m

## Turnover

The following table shows the value of turnover of manufacturing establishments. The figures include sales of goods whether produced by the establishment or not, transfers out of goods to other establishments of the same enterprise, bounties and subsidies on production, plus all other operating revenue from outside the enterprise, such as commission, repair and service revenue and the value of capital work done on own account. Rents, leasing revenue, interest (other than hire purchase), royalties and receipts from the sale of fixed tangible assets are excluded.

## Value added

The statistics on value added contained in the following table have been calculated by adding to the value of turnover the increase (or deducting the decrease) in the value of stocks, and deducting the value of purchases, transfers in and selected expenses. A more detailed description of the method of deriving value added is given on page 731.

**MANUFACTURING ESTABLISHMENTS—VALUE ADDED, BY INDUSTRY SUB-DIVISION  
STATES AND TERRITORIES, 1968-69, 1969-70 AND 1971-72**

(a) Australian Standard Industrial Classification.

## Electricity and gas establishments

As mentioned on page 729, the electricity and gas industries, which were previously included in the Annual Factory Census, have been the subject of separate censuses as from 1968-69. In addition the electricity and gas census has been extended to cover distribution as well as production. The following tables show statistics for each State and Territory, and for Australia for the years 1968-69, and 1969-70.

For electricity and gas, the basic census unit is an exception to the general concept of the standardised unit. Because of the nature of the activities of electricity and gas undertakings, the single

operating location basis is not suitable. The establishment unit used consists of all locations, including administrative offices and ancillary units, mainly concerned with the production and/or distribution of electricity or gas, operated by the undertaking in the one State. The use of this concept is one of the reasons for the number of electricity and gas establishments since 1968-69 being considerably less than in previous years. The other main reason is that until 1967-68, a number of electricity generating stations operated by enterprises principally for their own use were included. However, as from 1968-69 these generating stations have been included in the electricity census only if sales and transfers of electricity exceeded \$100,000 in value.

**ELECTRICITY AND GAS ESTABLISHMENTS(a), SUMMARY OF OPERATIONS  
STATES AND TERRITORIES, 1969-70 AND 1971-72**

State or Territory	Number of establishments operating during year	Persons employed(b)			Wages and salaries (\$m)	Turnover (c) (\$m)	Stocks at 30 June		Purchases, transfers in and selected expenses (\$m)	Value added (\$m)	Fixed capital expenditure(d) (\$m)
		Males (No.)	Females (No.)	Total (No.)			Opening (\$m)	Closing (\$m)

(a) Covers production and distribution. (b) At end of June. Includes working proprietors. (c) In some States electricity is produced by certain undertakings and sold to other undertakings for distribution. In these States sales of electricity are duplicated due to inclusion of the bulk sales to these distributors. (d) Outlay on fixed tangible assets less disposals. (e) Not available for publication.

## Principal factory products

The factory production of certain commodities is shown in the monthly and quarterly publications of this Bureau, and in the bulletin *Manufacturing Commodities—Principal Articles Produced*.

The following table shows the total recorded production of some of the principal articles (i.e. of those for which production can be represented in quantitative terms) manufactured in Australia. A more complete list, where available, is published in the aforementioned bulletin.

(a) Includes Northern Territory and Australian Capital Territory. (b) Items 242.07 to 242.11 are published in metric units of measurement (1 Imperial ton equals 1.016 metric tonne). (c) Primary origin only includes small quantities of zinc dust.

## CHAPTER 22

### RURAL INDUSTRY

This chapter is divided into four major parts:

- Introduction, dealing with the disposal of Crown lands, closer settlement and war service settlement and general rural activity in Australia;
- Agricultural production;
- Pastoral production; and
- Other rural industries, which includes the dairying, pig, poultry and bee-farming industries.

For greater detail on the subjects dealt with in this chapter see the annual bulletins *Rural Industries* (10.29), *Value of Production* (10.24) (10.25) (10.26) (10.27), and *Manufacturing Commodities* (12.7) (regarding butter, cheese, etc., factories) issued by this Bureau. Current information on commodities produced is obtainable in the *Quarterly Summary of Australian Statistics* (1.3), *Monthly Review of Business Statistics* (1.4), *Monthly Bulletin of Production Statistics* (12.14), and *Digest of Current Economic Statistics* (monthly) (1.5). The series of bulletins *Classification of Rural Holdings by Size and Type of Activity* (10.28) (see page 747) shows particulars of rural holdings classified by size, nature and area of crops, and numbers of livestock, and also according to main type of activity. The mimeographed annual *Apparent Consumption of Foodstuffs and Nutrients* (10.10) contains details of the production and utilisation of foodstuffs. The following mimeographed publications also contain considerable detail on the particular subjects dealt with.

**General.** *Value of Primary Production (excluding Mining) and Indexes of Price and Quantum of Farm Production* (annual) (10.27), *Value of Primary Production (excluding Mining) (Preliminary Statement)* (annual) (10.25), *Gross Value of Primary Production (excluding Mining) (Preliminary Estimates)* (annual) (10.24), *Rural Land Use, Improvements, Agricultural Machinery and Labour* (annual) (10.59), *New Tractors: Receipts, Sales and Stocks* (quarterly) (12.18), and *New Agricultural Machinery* (quarterly) (12.1), *Estimates of Gross Indebtedness of Agricultural Producers, Australia* (annual) (10.62).

**Agricultural production.** *Crop Statistics* (annual) (10.58), *Agricultural Statistics (Preliminary Statement)* (annual) (10.57), *The Wheat Industry* (four a year) (10.35) (10.36) (10.52) (10.53), *The Fruit Growing Industry* (annual) (10.11), *Grape Production and Utilisation* (annual) (10.61), *Principal Agricultural Statistics: Australia, Preliminary Estimates* (annual) (10.63).

**Pastoral production.** *Livestock Statistics Australia, Preliminary Estimates* (annual) (10.15), *Livestock Statistics* (annual) (10.14), *The Meat Industry* (monthly) (10.16), *Wool Production* (annual) (10.39), *Wool Production and Utilisation* (annual) (10.38), *Sheep Numbers, Shearing and Wool Production (Provisional Estimates)* (10.69) and *Wool Production, Sheep Numbers and Shearing (Preliminary Estimates)* (10.56).

**Other rural production.** *The Dairying Industry* (monthly) (10.6) and annual (10.5), *Chicken Hatchings and Poultry Slaughtering* (monthly) (10.44), *Production Summaries No. 36—Preserved Milk Products* and *No. 55—Butter and Cheese* (monthly) (12.16), and *Bee Farming* (annual) (10.3).

Detailed particulars of the early development of various aspects of Australian rural industry are given in previous issues of the Year Book up to No. 53 (see, for example No. 53, pages 885, 888, 891–2).

**Rural debt.** For estimated figures of rural debt to specified lenders for the years 1967–68 to 1971–72 see page 533 of this Year Book.

Throughout this chapter yearly periods for area and production of crops relate to years ended 31 March. Other periods in respect of e.g. factory and trade statistics relate to years ended 30 June.

## INTRODUCTION

### Disposal of Crown lands

#### Land legislation and tenures

The following sections contain figures showing the extent of the different land tenures in the several States and Territories, classified under broad headings indicating the nature of the tenure, together with some general descriptive matter. Information in greater detail, descriptions of the land

tenure systems of the several States and the internal Territories, and conspectuses of land legislation in force and of the systems of land tenure were provided in Year Book No. 48 and previous issues (see also Year Book No. 50, page 85 and List of Special Articles, etc. preceding General Index to this Volume).

### Free grants and reservations

Provision exists in all States except Tasmania for the disposal of Crown lands for public purposes by free grants, and in all States for the temporary and or permanent reservation of Crown lands for public purposes. In the Northern Territory any Crown lands not subject to any right of, or contract for, purchase may be resumed for public purposes, and the whole or any portion of the lands resumed may be reserved for that purpose. In the Australian Capital Territory, under the *Seat of Government (Administration) Act 1910-72*, Crown lands may not be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act.

### AREAS OF CROWN LANDS RESERVED: STATES AND TERRITORIES, 1968 TO 1972 (\*000 acres)

Year	N.S.W.(a)	Vic.(a)	Qld(b)	S.A.(a)	W.A.(a)	Tas.(a)	N.T.(a)	Total(c)
1968 . .	15,872	(b)8,952	27,833	22,919	80,658	5,327	60,988	222,549
1969 . .	15,849	n.a.	28,209	22,919	80,772	6,313	61,124	n.a.
1970 . .	15,793	(d)7,787	28,466	22,925	84,018	6,374	62,217	227,580
1971 . .	15,747	(d)7,790	28,636	22,939	90,333	6,619	62,348	234,412
1972 . .	15,667	(d)7,793	28,582	22,943	96,395	6,643	62,348	240,371

(a) At 30 June. (b) At 31 December. (c) Excludes the Australian Capital Territory. (d) Excludes areas set aside for roads.

The purposes for which areas were reserved are given hereunder for the latest year available as set out in the table above.

**New South Wales.** For travelling stock, 4,913,641 acres; forest reserves, 1,582,899 acres; water and camping reserves, 736,042 acres; mining reserves, 982,352 acres; recreation and parks, 733,791 acres; other reserves, 6,718,240 acres; total 15,666,965 acres.

**Victoria.** Water reserves, 212,310 acres; forest and timber reserves, 5,805,596 acres; national parks, 506,919 acres; public parks and camping reserves, 120,812 acres; native flora and fauna, 136,048 acres; other reserves (excluding roads), 1,011,071 acres; total, 7,792,756 acres.

**Queensland.** For timber reserves, 1,721,525 acres; State forests and national parks, 10,365,561 acres; Aboriginal reserves, 6,847,734 acres; streets, surveyed roads and stock routes, 4,322,268 acres; general reserves, 5,324,431 acres; total, 28,581,519 acres.

**South Australia.** Total area of surveyed roads, railways and other reserves, 22,943,482 acres including 18,842,665 acres set apart as Aboriginal reserves.

**Western Australia.** For State forests, 4,506,717 acres; timber reserves, 170,727 acres; other reserves, 91,717,845 acres; total, 96,395,289 acres.

**Tasmania.** For forest reserves, 5,593,000 acres; national parks, 1,050,000 acres; total, 6,643,000 acres.

**Northern Territory.** For Aboriginal, defence and public requirements, 62,348,000 acres.

### Conditional and unconditional purchases of freehold

Crown lands in the States may be disposed of by unconditional purchase at public auction or by certain other forms of purchase (for details see Year Book No. 48, pages 91-2). Conditional purchases of various types may also be made. In the Northern Territory only 0.1 per cent of the total area is alienated, the remainder being held under lease or licence, or reserved for various purposes or unoccupied. In the Australian Capital Territory about 11 per cent of the area is alienated or in process of alienation in consequence of contracts existing prior to the establishment of the Territory.

### Leases and licences

Well over half the area of the States of New South Wales and South Australia and of the Northern Territory and about four-fifths of Queensland are occupied under some form of lease or licence. In Victoria, only about one-tenth of the area is leased or licensed, more than half being alienated; in Western Australia, more than one-third is leased or licensed, most of the remainder being unoccupied.

in Tasmania about one-third is leased or licensed, while about one-quarter of the area of the State is occupied by the Crown or unoccupied, and the remainder alienated. Areas leased or licensed in the States are held under Crown lands Acts, closer settlement Acts, mining Acts, etc., and in the Territories under various Ordinances.

*Land Acts and Ordinances.* The types of lease and licence granted under land legislation cover a wide range, and vary with each State or Territory. The following are examples: grazing or pastoral, settlement and closer settlement, settlement purchase, conditional and unconditional purchase, perpetual and Crown; however, the variations of these forms and the special forms of lease and licence which exist would extend this list considerably. Details of the various types in existence are given in Year Book No. 48, pages 93-4, and some detail is included in the tables on pages 878-81 of Year Book No. 53.

**AREAS OCCUPIED UNDER LEASE OR LICENCE OTHER THAN MINING AND  
FORESTRY: STATES AND TERRITORIES, 1968 TO 1972**  
(<sup>'000</sup> acres)

Year	N.S.W.(a)	Vic.(a)	Qld(b)	S.A.(a)	W.A.	Tas. (a)	N.T. (a)(c)	A.C.T. (a)(c)	Total
1968	110,499	(b)5,636	353,163	149,530	(a)244,804	766	191,595	254	1,056,247
1969	112,250	n.a.	346,946	149,327	(a)245,240	699	192,966	251	n.a.

(a) Year ended 30 June. (b) Year ended 31 December. (c) Leases and licences for all purposes.

### Closer settlement and war service settlement

#### Closer settlement

Particulars of the methods of acquisition and disposal of land for the closer settlement of civilians and returned service personnel (1914-18 War) in the several States are given in issues of the Year Book up to No. 22 (*see* No. 22, pages 163-9), and the results of the operations of the several schemes have appeared in subsequent issues in considerable detail. However, the amalgamation in some States of closer settlement records with those of other authorities has since made it impossible to obtain up-to-date figures for those States and for Australia as a whole. Page 96 of Year Book No. 48 contains particulars as at 30 June 1960 of the areas and costs for those States for which separate information is available.

#### War Service Land Settlement Scheme

The War Service Land Settlement Scheme provides for the settlement on the land of eligible ex-servicemen from the 1939-45 War and the Korea-Malaya operations. Finance for capital expenditure under the scheme in South Australia, Western Australia and Tasmania and for special loans to New South Wales and Victoria is provided through Loan (War Service Land Settlement) Acts. Finance for other aspects of the scheme in all States is provided by annual parliamentary appropriation. The *States Grants (War Service Land Settlement) Act* 1952 provides that the responsible Commonwealth Minister may make grants of financial assistance to the States under such terms as he may from time to time determine. At 30 June 1970, 9,129 farms had been allotted from a total area of 13,936,731 acres acquired and no further farms are to be provided.

Particulars of expenditure on war service land settlement, to 30 June 1968, are given in Year Book No. 55, pages 716-17.

### Alienation and occupation of Crown lands

Detailed particulars of the alienation and occupation of Crown lands in the several States and Territories are given in previous issues of the Year Book up to No. 53 (*see* No. 53, pages 878-81).

The following table provides a summary for each State and Territory, and for Australia as a whole, of the alienation and occupation of Crown lands in 1972.

## ALIENATION AND OCCUPATION OF CROWN LANDS: STATES AND TERRITORIES, 1972

State or Territory	Private lands				Crown lands				Total area
	Alienated		In process of alienation		Leased or licensed		Other(a)		
	'000 acres	Per cent	'000 acres	Per cent	'000 acres	Per cent	'000 acres	Per cent	
N.S.W.(b)	62,195	31.4	4,240	2.1	112,562	56.8	19,040	9.6	198,037

Qld(c)	28,179	6.6	34,353	8.0	340,160	79.7	24,188	5.7	426,880
S.A.(b)	16,038	6.6	288	0.1	148,676	61.1	78,243	32.2	243,245
W.A.(c)	34,852	5.6	13,445	2.2	255,478	40.9	320,814	51.3	624,589
Tas.(b)	6,680	39.6	240	1.4	5,099	30.2	4,866	28.8	16,885
N.T.(b)	298	0.1	..	..	200,074	60.1	132,607	39.8	332,979
A.C.T.(b)(d)	58	9.6	6	1.1	236	39.2	301	50.1	601
Australia	181,679	9.6	52,951	2.8	1,067,853	56.2	596,979	31.4	1,899,462

(a) Occupied by Crown; reserved; unoccupied; unreserved. (b) At 30 June. (c) At 31 December, 1971. (d) Includes Jervis Bay area.

## Number and area of rural holdings

## Number and area

A holding in Australia has been defined by statisticians on a more or less uniform basis, and discrepancies which exist are not of sufficient importance to prevent comparisons. For the purpose of these statistics a holding has been defined as land of one acre or more in extent used for the production of agricultural produce (including fruit and vegetables) or for the raising of livestock (including poultry) and the production of livestock products.

There are considerable fluctuations from time to time in the numbers of very small holdings, and it is very difficult to determine in some cases whether or not they are rural holdings within the definition. In addition, in the very dry parts, such as the far west of New South Wales and Queensland and the remoter parts of South Australia and Western Australia, there are large areas of marginal lands sporadically occupied for extensive grazing under short-term lease or other arrangement, and the areas so occupied tend to fluctuate with the seasons. Similarly, there are rugged areas in the mountain country of some States which are also only occasionally occupied.

## RURAL HOLDINGS: NUMBER AND AREA, STATES AND TERRITORIES, 1967-68 TO 1971-72

Year	N.S.W.	Vic.(a)	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
------	--------	---------	-----	------	------	------	------	--------	-------

## NUMBER OF RURAL HOLDINGS

1967-68	76,225	72,802	43,694	29,058	23,116	10,631	305	196	256,027
1968-69	76,103	71,056	44,074	29,137	23,004	10,384	317	195	254,270
1969-70	75,908	69,498	43,829	29,035	22,937	10,159	322	193	251,881
1970-71	75,365	68,555	43,399	29,087	22,592	9,926	384	187	249,495
1971-72	74,960	67,714	43,389	29,095	21,997	9,807	419	187	247,568

TOTAL AREA OF RURAL HOLDINGS  
(<sup>0</sup>000 acres)

1967-68	171,767	39,564	380,993	160,765	275,334	6,579	174,385	350	1,209,737
1968-69	171,020	39,182	378,956	162,109	276,174	6,591	177,942	346	1,212,320
1969-70	170,630	39,057	380,218	162,692	280,819	6,517	182,116	339	1,222,387
1970-71	171,068	38,945	382,253	162,584	283,107	6,501	184,943	337	1,229,739
1971-72	170,504	39,249	381,540	160,980	282,864	6,442	192,468	329	1,234,377

(a) In 1967-68 the lists of land holdings used in the collection of agricultural and pastoral statistics in Victoria were reconciled with lists of rateable land of one acre or more in extent as recorded by municipalities for rating purposes.

## Land utilisation of rural holdings

The following table shows the purposes for which the land on the rural holdings referred to in the preceding paragraphs was used.

RURAL HOLDINGS: LAND UTILISATION, 1967-68 TO 1971-72  
(<sup>'000 acres</sup>)

Year	Area used for crops(a)	Land lying fallow(b)	Area under sown grasses and clovers(c)	Balance of holdings(d)	Total area of holdings
1971-72—					
New South Wales . . . . .	10,342	2,372	14,567	143,222	170,504
Victoria . . . . .	4,780	2,235	20,869	11,365	39,249
Queensland . . . . .	4,983	434	5,748	370,375	381,540
South Australia . . . . .	5,629	994	7,893	146,465	160,980
Western Australia . . . . .	9,269	871	16,863	255,861	282,864
Tasmania . . . . .	165	27	2,106	4,144	6,442
Northern Territory . . . . .	18	2	315	192,134	192,468
Australian Capital Territory . . . . .	3	..	101	225	329
Australia . . . . .	35,189	6,936	68,461	1,123,790	1,234,377
1970-71 . . . . .	33,101	8,995	69,267	1,118,377	1,229,739
1969-70 . . . . .	38,641	7,127	64,784	1,111,835	1,222,387
1968-69 . . . . .	41,012	9,525	59,747	1,102,036	1,212,320
1967-68 . . . . .	35,884	9,340	57,235	1,107,278	1,209,737

(a) Excludes (i) duplication on account of area double cropped, except for New South Wales and South Australia, and (ii) clovers and grasses cut for hay and seed which have been included in Area under sown grasses and clovers, and differs therefore from crop area figures shown later in this chapter. (b) Excludes short or summer fallow. (c) Includes paspalum. (d) Used for grazing, lying idle, etc.

## Classification by size and type of activity

Some of the information obtained from the 1968-69 Agricultural Census has been classified by size of principal characteristics (area of holdings, area of sown grasses and clovers, area of selected crops, and numbers of livestock). In addition, all holdings have been classified according to type of activity. Tables showing this information, for statistical divisions and States, and an outline of the methods used have been published in a series of bulletins *Classification of Rural Holdings by Size and Type of Activity*, 1968-69. Similar information was published in a series of bulletins for the years 1959-60 and 1965-66. Classifications of holdings by size of principal characteristics are available for each State for the years 1947-48, 1949-50 and 1955-56.

## Employment on rural holdings

## Persons engaged

The following table shows, for each State and Territory, the recorded number of males working on rural holdings. Particulars for females are not available except for New South Wales and Victoria. Additional particulars relating to the number of males employed in agriculture up to 1941-42 are shown in Year Book No. 36, page 852, and previous issues. Similar details for later years are not available.

MALES(a) ENGAGED ON RURAL HOLDINGS: STATES AND TERRITORIES, 31 MARCH 1972

Males engaged	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Permanent—									
Owners, lessees or share-farmers . . . . .	53,646	55,086	38,220	21,225	19,892	6,515	207	114	194,905
Relatives of owner, lessee or share-farmer, over 15 years of age, not receiving wages or salary . . . . .	635	3,783	2,892	141	1,311	..	27	8	8,797
Employees, including managers and relatives working for wages or salary . . . . .	21,460	12,395	14,492	5,885	6,243	3,166	1,571	121	65,333
Total permanent males . . . . .	75,741	71,264	55,604	27,251	27,446	9,681	1,805	243	269,035

Total males . . . . .	98,563	94,146	70,473	34,459	(b)	13,860	2,273	343	(b)

(a) Details for females not available except for New South Wales and Victoria where 7,170 and 15,049 females respectively were engaged on rural holdings. (b) Not available for publication.

### Farm machinery on rural holdings

The tables following show the principal types of farm machinery on rural holdings in the States and Territories at 31 March 1972. Additional information was published in the statistical bulletin *Rural Land Use, Improvements, Agricultural Machinery and Labour, 1971-72* (10.59). A more detailed analysis of tractors on rural holdings according to type, horse-power, type of fuel used, and age of tractor was published in the statistical bulletin *Tractors on Rural Holdings—Australia, 31 March 1969*. Details of grain and seed harvesters on rural holdings at 31 March 1970, classified according to type of propulsion, width of cut, age and type of front were published in the statistical bulletin *Grain and Seed Harvesters on Rural Holdings, 31 March 1970*.

#### FARM MACHINERY ON RURAL HOLDINGS: STATES AND TERRITORIES, 31 MARCH 1972

(a) Definition changed in 1969 when informants were asked to report in terms of numbers of units, i.e. the number of rows that can be planted simultaneously. Figures not strictly comparable with earlier years. (b) Not available.

### The soils of Australia

Year Book No. 52 contains an article (pages 873-9) on the soils of Australia which deals with the following matters: nature and development of Australian soils, including the agricultural development of soils, and types of Australian soils. A soil map of Australia and illustrations are included on plates 47 to 51 of Year Book No. 52.

### Soil improvement and conservation

#### Fertilisers

The bulk of Australia's requirements of nitrogenous and phosphatic fertilisers is supplied by the domestic industry. Requirements of potassic fertilisers are primarily imported. Raw materials and manufactured fertilisers which are not available in Australia are imported as required.

As a result of widespread deficiency of phosphorus in Australian soils, phosphatic fertilisers account for a large proportion of usage both on crops and pastures. During 1971-72 usage of nitrogen, phosphorus and potassium in elemental terms was approximately 122,295 tons, 369,412 tons and 69,372 tons respectively. This is equivalent to a usage ratio of 2 : 7 : 1.

Information regarding the area treated with artificial fertilisers and the quantity of artificial fertilisers (superphosphate, bonedust, nitrates, etc.) used in each State during the 1971-72 season is given in the following table.

AREA FERTILISED AND QUANTITY OF ARTIFICIAL FERTILISERS USED  
STATES AND TERRITORIES, 1971-72

State or Territory	Crops			Pastures			Total

The chief sources of Australia's supplies of natural phosphate are Nauru, Christmas Island (Indian Ocean), Gilbert and Ellice Islands and Morocco. Sodium nitrate is obtained chiefly from Chile and the U.S.A.

## IMPORTS OF FERTILISERS: AUSTRALIA, 1967-68 TO 1971-72

Exports of fertilisers (manufactured locally) amounted to 1,012,000 cwt valued at \$1,311,000 in 1971-72 compared with 287,000 cwt valued at \$174,000 in 1970-71.

## Aerial agriculture

Extensive use is made of aircraft for top-dressing and seeding, for spraying and dusting of crops and pastures, and for pest and vermin extermination.

For 1956-57 (the first year for which data are available) the total area treated was 1,466,000 acres; in 1971-72 the total was 10,604,000 acres. The following table shows details of area treated and materials used for each State for the five years ended 31 March 1972.

## AERIAL AGRICULTURE, 1967-68 TO 1971-72

Year ended 31 March	Area topdressed and seeded	Area sprayed	Total area treated(a)	Materials used		Total flying time
	'000 acres	'000 acres	'000 acres	Super- phosphate tons	Seed '000 lb	hours
1972—						
New South Wales(b)	3,609	1,541	5,292	178,835	2,963	37,138

1968	10,495	(d)	14,348	524,374	3,249	102,112

(a) Includes other types of treatment (rabbit baiting, etc.). (b) Includes details for the Australian Capital Territory.  
(c) Includes details for the Northern Territory. (d) Not available for publication.

**Pasture improvement**

An article on pasture improvement, which includes notes on indigenous and introduced species of grasses and which traces the development of pasture research in Australia, appears on pages 1001-2 of Year Book No. 49.

**Soil conservation**

Year Book No. 49 contains an article (pages 1003-4) on soil conservation which deals with the following matters: land use and soil erosion, agents of erosion, prevention and control, and the activities of various Commonwealth and State authorities which promote and co-ordinate research into the problems of soil erosion and the initiation of preventive measures.

**AGRICULTURAL PRODUCTION**

In general, statistics in this chapter relating to agricultural production are derived from returns supplied by approximately 248,000 farmers who utilise one acre or more of land for agricultural or pastoral purposes. The latest figures available are those for the year 1971-72. The returns are collected on a substantially uniform basis in all States at 31 March each year, and relate mainly to crops sown in the previous twelve months. Where harvests are not completed by March (e.g. potatoes), provision is made in some States for a special collection after the harvest is completed and in others for the inclusion of the total estimated yield expected from the complete harvest. In cases where additional data are available from marketing authorities or other sources these are used in conjunction with the annual census returns. The statistics published in this section are therefore shown in 'agricultural' years. For most purposes there will be little error involved in considering them as applying to years ended 30 June.

For more detailed information on period covered and details of the weights and measures used in recording production of agricultural commodities see introductory notes to the bulletin *Rural Industries*. Details of weights and measures are also included after the Contents of this Year Book.

**Progress, assistance and control****Progress of cultivation**

The following table shows the area of crops in each of the States and Territories of Australia at ten-yearly intervals since 1860-61 and during each of the eleven seasons 1961-62 to 1971-72.

**AREA OF CROPS(a): STATES AND TERRITORIES, 1860-61 TO 1971-72**  
(<sup>'000</sup> acres)

1967-68	11,343	5,457	4,653	5,414	8,877	262	14	5	36,024
1968-69	13,614	6,250	5,117	6,415	9,484	273	16	8	41,178
1969-70	12,352	5,466	5,456	5,659	9,667	242	16	5	38,865
1970-71	9,797	4,315	4,519	4,936	9,455	207	6	3	33,237
1971-72	10,348	4,784	5,100	5,629	9,271	172	18	3	35,324

(a) The classification of crops was revised in 1971-72 and adjustments made to statistics back to 1967-68. After 1966-67 lucerne for green feed, hay and seed, and pasture cut for hay are excluded.

### The Australian Agricultural Council

The influence of government and semi-government authorities on Australian rural industry is most apparent in the fields of guaranteed prices, subsidies and controlled marketing. Many of these aspects of intervention at the national level take place indirectly through the Australian Agricultural Council. This is a permanent organisation which was formed following a conference of Commonwealth and State Ministers on agricultural and marketing matters held at Canberra in December 1934. The Council consists of the Commonwealth Ministers for Primary Industry, Northern Development and the Northern Territory and the State Ministers of Agriculture, with power to co-opt the services of other Commonwealth and State Ministers as required. The principal functions of the Council are: the promotion of the welfare and development of agricultural industries generally; the exchange of information on agricultural production and marketing; the improvement of the quality of agricultural products and the maintenance of high grade standards; to ensure, as far as possible, balance between production and available markets; and organised marketing.

A permanent Standing Committee on Agriculture was also formed to advise the Council on all the above matters, and in addition to bring about co-operation and co-ordination in agricultural research, to advise State and Commonwealth Governments on the initiation and development of agricultural research programs, and to secure co-operation between all Governments in respect of quarantine measures against pests and diseases of plants and animals.

The Standing Committee on Agriculture comprises the permanent heads of the State Departments of Agriculture, the Secretary, Department of Primary Industry, and a representative each from the Commonwealth Departments of the Treasury, Health, Overseas Trade, Northern Development, the Northern Territory, External Territories, and from the Commonwealth Scientific and Industrial Research Organization.

### Financial assistance to primary producers

Financial assistance to primary producers by the Commonwealth Government may be provided in a number of ways. *See also* pages 556 and 561, Chapter 18, Public Finance. Examples of these follow.

*The Rural Reconstruction Scheme* provides finance to the States to help restore to economic viability those farms and farmers with capacity to maintain viability in the longer term. The forms of assistance comprise:

*Debt reconstruction* to assist the farmer who, although having sound prospects of long term commercial viability, has used all his cash and credit resources and cannot meet his financial commitments; and

*Fruitgrowing Reconstruction Scheme* announced on 14 July 1972 provides \$4.6 million to assist horticulturists facing financial difficulties to remove surplus fruit trees. Growers eligible for assistance are those whose trees take at least 5 years to mature; have a commercial bearing life of at least 10 years; and produce fruit which are in a chronic state of over supply. The scheme applied initially to the canning peach, canning pear, fresh apple and fresh pear industries, but may be extended to other fruit trees which meet the above criteria. In March 1973 it was extended to include the canning apricot industry.

Two forms of assistance are offered:

*Clear fell* for the grower who is predominantly a horticulturist, who is in severe financial difficulties and intends to clear fell his orchard and leave the fruit growing industry.

*Partial fell* for the grower whose resources are inadequate to withstand the short term effects on his economic viability of removing trees without assistance; whose long term viability is threatened by the surplus of the horticultural commodity concerned; and who has sound long term prospects after removal of the surplus trees and taking into account other potential uses of the land.

The maximum rate of assistance is \$500 per acre for canning peaches and canning pears and \$350 per acre for fresh apples and fresh pears. The Scheme is administered, so that the average rate of assistance does not exceed \$350 per acre for canning fruit and \$250 per acre for fresh fruit.

A grower who receives assistance under the scheme must undertake not to plant within 5 years from the date of receipt of assistance any trees specified by the administering authority. The specified trees at present are the same as those in respect of which assistance

is provided under the Scheme. Applications for assistance close on 30 June 1973 and trees must be removed by 31 October 1973. At 9 March 1973, 433 applications had been received and 69 applications involving 950 acres of fruit trees had been approved.

*Farm build-up* to supplement the normal processes under which properties which are too small to be economic are amalgamated with an adjoining holding, or to assist a farmer with a property too small to be economic to purchase additional land to build up his property to at least economic size.

For those obliged to leave the industry limited assistance by way of a loan up to a maximum of \$3,000 is available where such assistance is necessary to alleviate conditions of personal hardship. In addition, such persons may be eligible for retraining under the Rural Reconstruction Employment Training Scheme.

Originally, \$100 million was to be made available to the States over a period of 4 years ending 30 June 1975. In addition the States were authorised to use \$9.5 million from the pre-war Farm Debt Adjustments Scheme for rural reconstruction purposes. However, following a review of the scheme in March/April 1972, the Commonwealth undertook to provide the whole \$100 million by 30 June 1973 and to provide \$15 million in 1973–74 to fund approvals given in the later months of 1972–73. Following the review of the scheme in March 1973, the Commonwealth agreed to provide a further \$36 million to finance new approvals in 1973–74. From the inception of the scheme until 28 February 1973, 12,621 applications for assistance had been received, 3,308 applications for debt reconstruction and 1,129 applications for farm build-up have been approved; and the value of assistance approved amounted to \$116.8 million.

*Five Year Dairy Industry Stabilisation Plan.* A new five year stabilisation plan providing for the continuation of financial assistance on butter and cheese production and an export bounty on processed milk products commenced on 1 July 1972. The amount of assistance on butter and cheese production will be determined annually in the light of the needs and circumstances of the industry but will not be less than \$27 million annually and for 1972–73 the level of assistance was set at \$27 million. The export bounty on processed milk products will continue at the maximum rate of \$800,000 annually for each of the five years of the plan. (Details of earlier plans have been given in previous year books.)

*Commitments to industry-financed stabilisation schemes.* In schemes of this nature the Commonwealth generally accepts a defined contingent liability to contribute to Government-approved stabilisation funds if growers' contributions prove inadequate. The contribution by the Commonwealth to the Wheat Prices Stabilisation Fund is an example.

Commonwealth payments are made to assist in control and eradication of diseases and pests by the various States and to provide natural disaster relief assistance, where these are beyond the financial capacity of the States.

For details of the Emergency Financial Assistance for Woolgrowers and the Wool Deficiency Payments Scheme see page 812. Details of the Marginal Dairy Farms Reconstruction Scheme are given on page 826.

### Agricultural research

Each State Department of Agriculture has a number of research stations, investigating problems mainly of the regions in which they are located. In addition, a substantial amount of research and investigational work is carried out by these departments on farmers' properties. The work is supported by central laboratory and service facilities in capital cities, and increasingly also by research, analytical and diagnostic laboratories in the country areas. Research results are passed on to farmers through field days, meetings and publications, and through extension staff of the State Departments of Agriculture. In recent years, there has been increasing interest in economic interpretation of research results.

The Commonwealth Scientific and Industrial Research Organization carries out research at field stations and laboratory facilities in many parts of Australia, and also undertakes developmental studies at national level. Its research programs in the agricultural and livestock fields are generally designed to give information which is widely applicable in the Australian environment, and which may require further regional interpretation and adaptation in order that it may be of use to the farming industries. The universities also carry out agricultural research at laboratory and field levels, in addition to their teaching functions.

For details of agricultural training see Chapter 19, Education, Cultural Activities and Research.

### Research schemes

The research activities of State Departments, the C.S.I.R.O., universities and other institutions, are supplemented by funds provided under a series of joint Commonwealth-industry research schemes. Statutory arrangements of this nature exist for tobacco, wool, wheat, dairying, meat, poultry (eggs), chicken meat, pigs, dried fruits and fish. Contributions to these research schemes are raised from the industry by way of a levy on the produce concerned, matched by Commonwealth funds.

For research work in industries where legislation-backed arrangements do not exist, voluntary contributions from the rural industry are matched by the Commonwealth from a Special Research Grant to finance a range of research projects e.g. fruit fly disinfestation, locust control, pest management, grape forecasting, etc.

### Extension services and market outlook information

Agricultural extension services are provided by the States through their Departments of Agriculture, and in certain special fields by other State departments and authorities. Extension services also operate in the Northern Territory, Australian Capital Territory and Papua New Guinea.

All State Departments of Agriculture have university or agricultural college trained officers located in country areas. They carry out advisory and educational activities in the farming community, through contact with individual farmers, and through group and general publicity channels. In recent years several States have placed agricultural economists in country areas, strengthening the economic and farm management content of extension.

Support for the field extension staff is provided by information service groups, by applied research teams and industry and subject matter specialist groups and by diagnostic and analytical services. Some States have advisory staff specialising in agricultural mechanisation, and one State has begun to place extension method specialists in country areas.

Information services operated by Departments of Agriculture include agricultural journals, periodicals in various industry fields, pamphlets, newsletters, films, radio talks and television presentations. Group activities include discussion groups, field days, demonstrations, evening meetings and displays.

Since 1948 the Commonwealth has provided unmatched grants to the States to assist them in expanding their extension activities. In 1966, a program of rapid expansion of this assistance beyond the existing provision of \$1.4 million per annum was undertaken, with \$21 million being made available during the subsequent five years. Provision for the five year period which began in 1971 amounts to \$37 million. The Commonwealth Extension Services Grant is used mainly by State Departments of Agriculture, and its scope includes extension, regional research, information, economic services and training.

Since 1971 the Bureau of Agricultural Economics has organised a series of annual National Agricultural Outlook Conferences to which representatives from industry bodies, marketing authorities, State and Commonwealth government departments, universities and other agricultural institutions are invited to analyse and discuss in depth the outlook for rural commodities.

Extension type services are available from non-government sources. Some commercial firms and co-operatives provide extension or advisory services primarily for their clients. Over the past decade a new profession of farm management consultants has emerged, providing fee or contract services ranging from property assessment or supervision to detailed farm management and development plans. Farmers' needs and interests were demonstrated by an initial phase of grouping themselves together in farm management clubs to employ their own advisors.

## Distribution, production and value of crops

### Distribution of crops

The wide range of climatic and soil conditions over the agricultural regions of Australia has resulted in a diversity of crops being grown throughout the Commonwealth. Generally, cereal crops (excluding rice and sorghum) are grown in all States over wide areas, while other crops are confined to specific locations in a few States.

**Wheat**

Wheat is grown on a large scale in all States except Tasmania, and is the most important crop in Australia in terms of area, production and exports. The present limits of the wheat belt have been established after considerable fluctuation over the last four decades. In January 1934 a Royal Commission was appointed to inquire into and report upon the economic condition of the growing, handling and marketing of wheat, and the manufacturing, distributing and selling of flour and bread. The Report of this Royal Commission provides an authoritative description of all aspects of the industry up to that time.

It should be noted that for the 1972-73 season, production of wheat was reported in metric units. The *standard unit of reporting is a tonne* and consequently, figures relating to production of wheat are expressed in tonnes in this section of the Year Book. Conversion of previous years series was made by using a factor of 1 tonne = 36.7437 bushels.

### Wheat marketing and research

Two of the aspects of government and semi-government assistance and control which have contributed to the development of the industry are the organisation of overseas marketing and of research.

As a large proportion of the Australian wheat crop is exported, the marketing of wheat plays an important part in the industry. The Australian Wheat Board was constituted in September 1939, under National Security (Wheat Acquisition) Regulations, to purchase, sell, or dispose of wheat or wheat products, and to manage and control all matters connected with the handling, storage, protection, shipment, etc. of wheat acquired, and such other matters as were necessary to give effect to the regulations. Details of the operations of the Australian Wheat Board and the Wheat Stabilization Board in licensing wheat grown during the seasons 1941-42 to 1948-49 will be found in Year Book No. 38, pages 940-1, and a detailed survey of legislation relating to stabilisation of the wheat industry, including controls exercised during the 1914-18 and 1939-45 Wars and legislation establishing the Wheat Industry Stabilization Plan in 1948, is given in the Appendix to Year Book No. 37, pages 1295-9.

The Wheat Industry Stabilization Board ceased to function on 31 December 1948, and under the *Wheat Industry Stabilization Act 1948* the Australian Wheat Board was reconstituted to administer the first stabilisation plan and was given powers similar to those held under the National Security Regulations. The new Board commenced to function on 18 December 1948. The Board has been continued in existence by the *Wheat Industry Stabilization Acts 1954, 1958, 1963-66 and 1968-70* for the purpose of administering the second, third, fourth and fifth five year stabilisation plans. Details of the more recent plans were published in Year Book No. 40, pages 841 and 842 (1947-48 to 1952-53 Plan), No. 44, page 861 (1953-54 to 1957-58), No. 48, pages 903 and 904 (1958-59 to 1962-63) and No. 54, pages 868 and 869 (1963-64 to 1967-68).

*Fifth Post-war Wheat Industry Stabilisation Plan.* Following negotiations during 1968, the fifth post-war Wheat Industry Stabilisation Plan was enacted by the Commonwealth and States towards the end of 1968. The new plan operates on very much the same lines as the previous ones. However, there are some important changes in detail in the main features of the plan which are set out below.

The plan was to operate for five years, commencing with the 1968-69 crop and ending with the marketing of the 1972-73 crop. However, the plan was subsequently extended to cover the 1973-74 crop. More detailed information is available in the publication: *The Wheat Industry, 1971-72 and 1972-73 (Preliminary)*, (10.35).

The *Wheat Export Charge Act 1968* repealed the *Wheat Export Charge Act 1963* and provided for an export charge on wheat and wheat products for the seasons 1968-69 to 1972-73 inclusive. The charge which may be levied is the excess of the average export return over the sum of the guaranteed price (*see below*) and five cents per bushel (\$1.84 per tonne) with a maximum charge of fifteen cents per bushel (\$5.51 per tonne). The ceiling on the Wheat Prices Stabilisation Fund, into which this charge is paid, has been raised from \$60 million to \$80 million. Any excess beyond this figure is returned to growers on a 'first in, first out' basis.

Payments from the Wheat Prices Stabilisation Fund will be paid to the Australian Wheat Board when required, for the purpose of building up the average export price for any season to the guaranteed price. When the average export realisations fall below the guaranteed price the deficiency is made up first by drawing upon the Stabilisation Fund in respect of up to 200 million bushels (5.44 million tonnes) of wheat from each crop. If the Fund is exhausted, the necessary deficiency payments will be made from the Commonwealth Government's Consolidated Revenue Fund. As the return from exports has been below the guaranteed price, there have been no collections of the wheat export charge since the 1956-57 No. 20 Pool when \$3,178,000 was collected. In fact, grower's money in the Fund was exhausted with the closure of the 1959-60 Pool, and since then the Commonwealth has been obliged to meet its commitment in respect of the export guarantee. Up to the payment on the 1971-72 Pool this has involved an amount totalling \$284 million.

The Commonwealth has guaranteed a price to growers applying to 200 million bushels (5.44 million tonnes) of wheat exported from each crop during the period of the plan. The guaranteed price is subject to adjustment in each year of the plan in accordance with changes in price of cash costs, rail freights and handling and storage charges. There will no longer be any adjustment for imputed costs such as interest on farmers' equity. The guaranteed price per tonne in the 1972-73 season is \$57.61 f.o.b. vessel, an increase of \$1.83 on that of the previous season. Following the extension of the fifth plan to cover the 1973-74 crop, the guaranteed price for that season has been set at \$58.79 per tonne.

The Australian Wheat Board is retained as the sole constituted authority for the marketing of wheat within Australia and for the marketing of wheat and flour for export from Australia for the period of the plan.

Amending legislation, with effect from December 1969, gave the Australian Wheat Board discretionary power to sell wheat in Australia for purposes other than human consumption at prices below that set for human consumption but not less than the equivalent of the guaranteed price.

The table below shows the home consumption prices of wheat by end usage, for the last five years.

**WHEAT PRICES: HOME CONSUMPTION PRICES(a)(b), 1968-69 TO 1972-73**  
(\$ per tonne)

Utilisation	1968-69	1969-70	1970-71	1971-72	1972-73
Human consumption	62.83	63.38	63.93	65.40	67.63
Manufacture of flour for industrial use		52.73	53.28	54.75	56.98
Stockfeed (basic)		55.12	56.95	58.79	67.63
Stockfeed (where purchaser undertakes to buy entire season's requirements from Wheat Board)		52.73	53.28	54.75	56.98

(a) Australian Wheat Board basic selling prices for f.a.q. bulk wheat, f.o.r. (ports) basis. (b) Includes a loading of \$0.37 per tonne in 1968-69, \$0.59 in 1969-70, \$0.55 in 1970-71, \$0.44 in 1971-72, and \$0.83 in 1972-73 to meet freight charges on wheat shipped to Tasmania.

### Wheat delivery quotas plan

In March 1969 the Australian Wheat Growers' Federation put forward proposals for the allotment of quotas on deliveries of wheat to the Australian Wheat Board. The Federation's proposals were mainly designed to bring marketable supplies of wheat more into line with available outlets, following the record 1968-69 harvest. The proposals became effective for the 1969-70 harvest. State governments have the responsibility, for Constitutional reasons, of implementing the quota plan within the States and each State has enacted the necessary enabling legislation. The period of operation of the legislation varies among the States.

Quotas are subject to annual review. Wheat in excess of a quota may be received from a grower if storage space is available but 'quota wheat' will receive preference as far as receipt and subsequent sale by the Australian Wheat Board is concerned.

State quotas effective for the 1970-71 to 1972-73 seasons and those proposed by the Federation and agreed to by all parties for 1973-74 are given in the table below.

**WHEAT DELIVERY QUOTAS, SEASONS 1970-71 TO 1973-74**  
('000 tonnes)

Quota	State	1970-71	1971-72	1972-73	1973-74
Basic	New South Wales	2,694	3,102	4,028	5,030
	Victoria	1,415	1,551	1,823	2,490
	Queensland	680	735	871	1,012
	South Australia	979	1,089	1,252	1,886
	Western Australia	2,259	2,068	2,585	3,065
	<i>Total</i>	<i>8,027</i>	<i>8,545</i>	<i>10,559</i>	<i>13,483</i>
Additional	New South Wales—				
	Prime hard	327	327	191	191
	Durum	..	54	54	54
	Queensland—				
	Prime hard	299	299	163	163
	South Australia—				
	Southern hard	..	..	109	109
	<i>Total</i>	<i>626</i>	<i>680</i>	<i>517</i>	<i>517</i>
	<b>Grand total</b>	<b>8,653</b>	<b>9,225</b>	<b>11,076</b>	<b>(a)14,000</b>

(a) In terms of '000 tonnes the national and State quotas are: New South Wales 5,275, Victoria 2,490, Queensland 1,175, South Australia 1,995, Western Australia 3,065, total 14,000. In addition, for 1973-74, provision has been made for a special pool quantity of 544,000 tonnes which will be available as determined by the Minister for Primary Industry, to any State that achieves deliveries in excess of its quota.

Deliveries made within the quotas established receive a first advance payment. This has been \$1.10 per bushel (\$40.42 per tonne) for f.a.q. bulk wheat, f.o.r. ports basis for a number of years. For 1973-74 in addition to \$1.10 there will be a special incentive first advance payment of 10 cents per bushel (\$3.67 per tonne). The quota plan also provides that wheat received which is declared by the Australian Wheat Board to have been sold and paid for within the season will be treated as quota wheat of the season and receive a first advance payment.

The States are responsible for determining the method of allocation of individual quotas within their respective boundaries. The bases of quota allocation vary from State to State, but in the main, quotas are based on a farm's average deliveries over a recent period.

### Wheat standards

A description of the F.A.Q. (fair average quality) standard of wheat is given in issues of the Year Book up to No. 53 (*see*, for example No. 53 page 902). However, over recent years there has been an extension of the system and Australian wheat is now marketed under eleven main different and distinct classifications. Each reflects the climatic and growing characteristics of its region of origin and also the particular characteristics of the varieties of wheat cultivated.

For each classification, samples of wheat are obtained each year and are mixed to give a representative sample of that grade. From these samples, which are representative of all the wheat of a particular classification grown in that region, standards for each grade are established and expressed, since the recording of wheat production in metric units in 1972-73, in kilograms per hectolitre. This standard is used as the basis for sales of each grade and varies from year to year and from State to State. Below is a table showing the standard weight of the main wheat varieties for the five years 1968-69 to 1972-73.

### AUSTRALIAN STANDARD WEIGHTS FOR PRINCIPAL GRADES, 1968-69 TO 1972-73

(Source: Australian Wheat Board)

South Australia—					
Hard . . . . .	79.3	78.3	77.7	76.8	80.7
F.A.Q. . . . .	79.3	78.6	78.6	78.3	81.6
Western Australia—					
F.A.Q. . . . .	79.8	78.6	79.9	79.9	78.6

(a) Northern f.a.q. (b) Central f.a.q. (c) Not fixed.

The several F.A.Q. grades, while possessing some characteristics in common, vary in protein content, milling characteristics, and dough qualities, and all are distinct grades. Similarly, the prime hard, hard and soft grades are individual grades segregated on the basis of specific quality characteristics.

In a normal season Australia produces a full range of wheats for all purposes from high protein hard wheats to low protein soft wheats.

### Bulk handling and storage of wheat

A detailed description of the bulk handling system, including its advantages and disadvantages compared with other methods of handling, appears on pages 954-8 of Year Book No. 39.

Bulk handling is general and has been in operation in all States for a considerable time. The bodies concerned with the administration of bulk handling in the various States are: Grain Elevators Board of New South Wales, Victorian Grain Elevators Board, State Wheat Board (Queensland), South Australian Co-operative Bulk Handling Ltd, Co-operative Bulk Handling Ltd (Western Australia), and the Tasmanian Grain Elevators Board.

<b>Australia . . . . .</b>	<b>15,171</b>	<b>17,901</b>	<b>19,091</b>	<b>19,212</b>	<b>19,368</b>

(a) Includes terminals, sub-terminals, country installations, and temporary storage. (b) Includes storage in southern New South Wales operated by the Victorian Grain Elevators Board.

Particulars of the operation of the bulk handling and storage systems in each State are set out on pages 916 and 917 of Year Book No. 48.

### International Wheat Agreement

Details of the first and second International Wheat Agreements operative from 1 August 1949 to 31 July 1953, and from 1 August 1953 to 31 July 1956, respectively, were published in Year Book No. 42 (*see* pages 840-1) or previous issues. Details of the third, fourth and fifth International Wheat Agreements which covered the periods from 1 August 1956 to 31 July 1959, 1 August 1959 to 31 July 1962 and 1 August 1962 to 31 July 1968 were published in Year Books 43 (page 836), 48 (page 906) and 55 (page 836) respectively.

### International Grains Arrangement

In August 1967 agreement was reached on a new International Grains Arrangement to operate for a period of three years from 1 July 1968. Details of the Arrangement were published in Year Book No. 55 (*see* page 836).

A new three year International Wheat Agreement came into effect on 1 July 1971. Like the International Grains Arrangement it covers a Wheat Trade Convention and a Food Aid Convention. The Wheat Trade Convention differs markedly from its 1968 predecessor in that it does not establish any maximum or minimum price provisions.

### Research into the wheat industry

Details of research into the Wheat Industry were published in Year Book No. 55 and previous issues. To the end of June 1972, the Wheat Industry Research Council and the State Wheat Industry Research Committees had spent \$17,710,000 mainly through grants to the Commonwealth Scientific and Industrial Research Organization, State Departments of Agriculture, universities and Wheat Research Institutes.

### Wheat farms: number and classification by activity

Particulars of the number of farms growing twenty acres and upwards of wheat for grain during each of the years 1967-68 to 1971-72 are shown in the following table. A farm worked on the share system or as a partnership is included as one holding only.

**NUMBER OF FARMS GROWING TWENTY ACRES AND UPWARDS  
OF WHEAT FOR GRAIN: STATES AND A.C.T., 1967-68 TO 1971-72**

State or Territory	1967-68	1968-69	1969-70	1970-71	1971-72
New South Wales . . . . .	20,619	21,340	20,608	18,537	18,723
Victoria . . . . .	11,056	11,722	11,618	9,669	10,273

Tasmania . . . . .	159	239	203	403	160
Australian Capital Territory . . . . .	20	27	16	9	8
<b>Australia . . . . .</b>	<b>55,372</b>	<b>58,239</b>	<b>55,878</b>	<b>48,659</b>	<b>51,223</b>

There is in Australia a widespread combination of wheat growing with other rural activities. This is illustrated, for all States and for Australia, in respect of the 1968-69 season, in a series of statistical bulletins *Classification of Rural Holdings by Size and Type of Activity*, 1968-69, Nos 1 to 7. These publications also contain details of numbers of rural holdings classified according to area of wheat for grain.

#### Varieties of wheat sown

The breeding of wheat suitable to local conditions has long been established in Australia. Farrer (1845-1905) did invaluable work in pioneering this field, and the results of his labour and the continued efforts of those who have followed him have proved of immense benefit to the industry. Their efforts have resulted in the development of disease-resistant varieties, better average yields, and a greater uniformity of sample, with which have accrued certain marketing advantages as well as an improvement in the quality of wheat grown. In 1968 the Australian Wheat Collection was established at Tamworth, New South Wales, to supply basic genetic material to Australian wheat breeders. Some 15,000 varieties are at present held in the collection.

The principal varieties of wheat sown and the percentage of each to the total area sown in the five main wheat-producing States of Australia in 1971-72 were as follows: New South Wales, Timgalen (16.3), Heron (15.8), Falcon (13.3); Victoria, Insignia (32.8), Olympic (19.3), Summit (14.6); Queensland, Mendox (27.5), Timgalen (19.7), Gamut (18.7); South Australia, Heron (32.3), Insignia (including Insignia 49) (14.9); and Western Australia, Gamenya (57.1), Falcon (13.4), Insignia (7.8). A detailed table of wheat varieties sown appears in the annual bulletin *The Wheat Industry*, 1971-72 and 1972-73 (*Preliminary*) (published in May 1973).

#### Wheat area, production and yield per acre

Prominent factors in the early development of the wheat industry were the increase in population following the discovery of gold and the redistribution of labour after the surface gold had been won. The economic depression of 1893 interrupted its progress, but its subsequent recovery was assisted by the invention of mechanical appliances, the use of superphosphate as an aid to production, and the introduction of new and more suitable varieties of wheat for Australian conditions. The establishment of closer settlement schemes and the settling of returned soldiers and others on the land were additional factors in its expansion.

#### WHEAT FOR GRAIN: AREA AND PRODUCTION STATES AND AUSTRALIAN CAPITAL TERRITORY, 1968-69 TO 1972-73

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	A.C.T.	Aust.
AREA ('000 ACRES)								
1968-69	9,962	3,984	1,789	3,748	7,295	17	4	26,799
1969-70	8,623	3,298	1,504	3,210	6,788	15	3	23,449
1970-71	5,475	1,879	825	1,983	5,835	11	1	16,009
1971-72	5,995	2,570	1,374	2,640	5,046	11	1	17,638
1972-73p	6,515	2,794	1,172	2,472	6,212	11	1	19,177
PRODUCTION ('000 TONNES)								
1968-69	5,855	2,469	1,143	2,263	3,060	11	2	14,804
1969-70	4,430	2,274	405	1,610	1,815	10	2	10,547
1970-71	3,010	1,004	120	790	2,957	8	1	7,896
1971-72	2,410	1,797	722	1,407	2,165	8	1	8,510
1972-73p	1,989	1,320	401	815	2,017	8	1	6,552

A graph showing the area sown to wheat for grain in Australia for the years 1900-01 to 1970-71 appears on plate 39, page 746 of Year Book No. 58, and a map showing the distribution of areas growing wheat for grain throughout Australia in 1962-63 appears on page 1013 of Year Book No. 50. Similar maps showing the distribution of wheat areas in 1924-25, 1938-39, 1947-48, and 1954-55 appeared respectively in Year Books No. 22, page 695, No. 34, page 451, No. 39, pages 977-8, and No. 43, page 833.

The size of the wheat harvest in Australia is determined largely by the nature of the season, resulting in considerable year-to-year fluctuations in production. The main wheat-producing States of Australia are New South Wales, Western Australia and Victoria. Tasmania imports wheat from the mainland to satisfy its needs, though it exports flour made from local wheat which is particularly suitable for biscuits. The production of wheat from 1940-41 is shown in Plate 40, page 765.

# WHEAT FOR GRAIN: AUSTRALIA 1940-41 TO 1972-73

PLATE 40

## Price of wheat

For details of prices paid for wheat by end usage, see the table on page 761.

The Wheat Board's monthly basic export selling prices for f.a.q. bulk wheat, f.o.b. basis, are shown below.

## MONTHLY EXPORT WHEAT PRICES(a): JULY 1968 TO JUNE 1973 (\$ per tonne)

Month	1968-69	1969-70	1970-71	1971-72	1972-73
July . . . . .	52.31	50.89	46.99	52.50	49.05
August . . . . .	52.31	50.11	47.40	51.53	51.17
September . . . . .	52.31	48.46	49.19	49.88	61.18
October . . . . .	52.27	48.46	50.94	48.92	71.52
November . . . . .	52.41	48.46	51.99	48.55	73.99
December . . . . .	52.41	48.46	52.27	48.13	83.09
January . . . . .	52.41	48.13	53.19	47.95	82.44
February . . . . .	52.41	48.13	52.87	47.95	72.52
March . . . . .	52.22	47.49	52.87	47.95	70.18
April . . . . .	51.90	46.99	52.68	48.73	70.23
May . . . . .	51.53	46.85	52.50	48.96	73.90
June . . . . .	50.75	47.03	52.31	48.69	83.13

(a) Australian Wheat Board average basis f.o.b. price quoted for f.a.q. bulk wheat. Much of the wheat exported is sold under contract for delivery over lengthy periods, and therefore, the prices shown do not necessarily reflect the prices received for all wheat shipped during the months shown.

*International Wheat Agreements, 1949-53 to 1962-68.* As indicated on page 763 full details of the five International Wheat Agreements covering the years 1949-53, 1953-56, 1956-59, 1959-62 and 1962-68 have been given in previous issues of the Year Book.

*International Grains Agreement.* In August 1967 agreement was reached on a new International Grains Arrangement to operate for a period of three years from 1 July 1968. The new arrangement consisted of two legal instruments, the Wheat Trade Convention and the Food Aid Convention. For further details see Year Book No. 57, page 758.

*International Wheat Agreement, 1971.* The new International Wheat Agreement came into force on 1 July 1971. It has a life of three years. The form of the 1967 International Grains Arrangement has been continued and the new Agreement comprises two separate legal instruments, namely the Wheat Trade Convention and the Food Aid Convention.

The new Wheat Trade Convention ensures that the machinery for consultation and co-operation on wheat marketing existing under earlier Agreements will be maintained. The administrative body, the International Wheat Council, continues in existence. The Convention provides for the continuation of the full reporting and recording of all commercial and concessional transactions in wheat and flour.

The 1971 Wheat Trade Convention differs in an important aspect from earlier agreements in that it contains no specific pricing provisions, but the agreement specifically provides that when prices and related rights and obligations are judged capable of successful negotiation, the International Wheat Council shall arrange a further conference with the objective of bringing them into effect. In addition, a newly established Advisory Sub-Committee on Market Conditions will keep the wheat market under continuous review. This Sub-Committee will report to the Executive Committee of the Council if it considers that a situation of market instability has arisen, or threatens to arise. The Executive Committee will then review the situation and try to find mutually acceptable solutions.

With the entry of U.S.S.R. and Brazil, which were not members of the 1967 International Grains Agreement, all major wheat trading nations except the People's Republic of China participate in the Wheat Trade Convention.

The new Food Aid Convention is basically unchanged from the previous arrangement. Under this Convention a number of developed countries, importers and exporters alike, will continue to provide developing countries with food aid in the form of grains or flour for human consumption. Australia's contribution will remain unchanged at 225,000 tonnes annually (8,267,000 bushels of wheat). Since the new convention has fewer members and total annual contributions have fallen from 4,259,000 tonnes to 3,974,000 tonnes, Australia's share has risen marginally to some 5.6 per cent.

Several minor changes have been incorporated in the new Food Aid Convention. A new clause provides that in exceptional cases, and on request, limited quantities of rice may be included in the program. Also, sales on credit terms of 20 years or more will be eligible to be counted against aid commitments provided that maximum use is made of the other eligible forms of aid such as grants and sales for non-transferable local currency.

#### Value of the wheat crop

The estimated gross value of the wheat crop in each State and in Australia during the season 1971-72 and the value per acre are shown below.

#### WHEAT FOR GRAIN: VALUE OF CROP(a), STATES, 1971-72

		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(b)
Aggregate value	\$'000	130,264	100,001	39,724	78,739	120,044	415	469,226
Value per acre	\$	21.73	38.91	28.91	29.83	23.79	37.73	26.60

(a) Gross value of total crop, including wheat used for seed and for stock feed on farms. Also includes payment of \$27,538,000 by the Commonwealth Government. (b) Includes the Australian Capital Territory.

#### Production and disposal of wheat in Australia

In the following tables details are given of Australian Wheat Board transactions, production and disposal of wheat during each of the years ended 30 November 1969 to 1972, and preliminary estimates for 1972-73.

#### RECEIVALS OF WHEAT BY THE AUSTRALIAN WHEAT BOARD, 1968-69 TO 1972-73 (<sup>0</sup>000 tonnes)

State	Year ended 30 November				
	1968-69	1969-70	1970-71	1971-72	1972-73
New South Wales	5,357	3,966	2,555	2,008	1,446
Victoria	2,577	2,337	894	1,753	1,165
Queensland	1,056	326	90	666	325
South Australia	2,162	1,516	681	1,306	709
Western Australia	2,876	1,598	2,712	1,927	1,776
Tasmania	6	5	3	5	4
Total	14,033	9,747	6,935	7,665	5,426

Stocks of wheat (including flour in terms of wheat) held by the Australian Wheat Board in each State at 30 November for the years 1968 to 1972 are shown in the following table. These data relate to stocks held at mills, sidings, ports, and depots as recorded by the Australian Wheat Board.

### STOCKS OF WHEAT, AND FLOUR AS WHEAT, 1968 TO 1972

(f) Subject to an estimated additional \$40,132,000 to be provided by the Commonwealth Government and payment of \$678,000 to the Wheat Industry Research Fund.

Details of earlier pools will be found in previous issues of the Year Book.

#### Imports of wheat

Wheat and flour have been imported in substantial quantities on four occasions since 1900; in 1902-3 the wheat harvest was only 336,874 tonnes, and wheat and flour equivalent to 339,323 tonnes of wheat were imported. An equivalent of 198,102 tonnes was imported in 1914-15 to supplement the yield of 680,000 tonnes produced in that season. Drought conditions in the Eastern States in 1945 necessitated the importation of feed grains from the U.S.A. including 20,000 tonnes of wheat. Owing to drought conditions in 1957-58 supplies of high protein wheat were insufficient for local requirements and, as a result, 40,415 tonnes were imported from Canada in 1958. No wheat has since been imported.

#### Exports of wheat and flour

Statistics in the following three tables are for years ended 30 June and relate to the exports of *Australian produce* only.

**WHEAT AND FLOUR: EXPORTS, AUSTRALIA, 1967-68 TO 1971-72**  
(\$'000 f.o.b.)

**World area and production of wheat**

The figures in the following table of the world area and production of wheat by principal countries and by continents have been compiled from statistics published by the International Wheat Council. Harvests in the northern hemisphere occur in the first of the two years mentioned in each column heading, and in the southern hemisphere at the end of that year and the beginning of the next. Harvests of the northern hemisphere countries are thus combined with those of the southern hemisphere which immediately follow; e.g. in 1970-71 the Canadian harvest occurred from August to September 1970 and the Australian harvest from October 1970 to February 1971.

## Principal wheat exporting and importing countries

The following table shows world exports of wheat and wheat flour (in terms of wheat) by the major wheat exporting countries, according to continents and countries of primary destination, based on statistics recently published by the International Wheat Council. While Australia's production of wheat has averaged about three per cent of the world's total during recent years, its exports account for a much higher proportion of the total quantities shipped. For the three years ended 1971-72 Australia's share of the world wheat exports has averaged 16 per cent.

(a) Years prior to 1968-69 include European Economic Community intratrade. (b) Excludes U.S.S.R., details of which are shown separately.

The above particulars are based on customs clearances of the exporting countries, and relate to years ended 30 June. There are small differences between Australian exports as shown and those on pages 768-9 due in part to the use by the International Wheat Council of a slightly different factor to convert flour to wheat equivalent.

## Oats

Oats is traditionally a cereal of moist temperate regions. However improved varieties and management practices have enabled oats to be grown over a wide range of soil and climatic conditions. It has excellent feed value and produces a greater bulk of growth than other winter cereals. It needs less cultivation than other winter cereals and responds to superphosphate and nitrogen in districts where it is usual to apply fertilisers. Oats has a variety of uses—as a pasture plant when rough sown into stubble or heavy clover pastures, as a fodder crop when mown and baled or cut for chaff, or as a grain when stripped (the stubble then being grazed off). The grain is sold through voluntary pools in Victoria, South Australia and Western Australia. In 1971 State statutory marketing boards were set up in New South Wales and Victoria after a poll of growers. The Victorian board was disbanded in 1972 and marketing reverted to a voluntary pooling arrangement. In the same year legislation to constitute a board was passed in South Australia. It has not yet commenced to operate. In Western Australia the grain is sold through a voluntary pool.

**Oats area, production and yield per acre**

Oats is usually next in importance to wheat among the grain crops cultivated in Australia. However, while wheat grown for grain in 1971-72 accounted for 61 per cent of the area of all crops, oats grown for grain represented only 11 per cent.

PLATE 41

Graphs showing the area sown to oats and production of oats in Australia appear on pages 993 and 995 of Year Book No. 49, and a map showing the distribution of areas growing oats for grain throughout Australia in 1962-63 appears on page 1015 of Year Book No. 50. The area sown to oats from 1900-01 to 1970-71 is shown in Year Book No. 58, Plate 39, page 746.

The production of oats from 1940-41 to 1971-72 is shown in plate 41, page 772.

Production of oats in 1971-72, 70,280,000 bushels was 35 per cent below the record production in 1966-67. Yield per acre was 22.9 bushels, which is below the record yield per acre of 25.2 bushels in 1966-67.

#### Value of oat crop

The average wholesale price in the Melbourne market for oats of good milling quality was \$0.73 per bushel in 1971-72, compared with \$0.64 in 1970-71. The estimated gross value of the oat crop in each State for the 1971-72 season and the value per acre were as follows.

#### OATS FOR GRAIN: VALUE OF CROP, STATES, 1971-72

		<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Aust.(a)</i>
Aggregate value	\$'000	8,780	11,334	1,215	5,496	10,256	304	37,391
Value per acre	\$	13.60	13.92	23.89	13.17	9.14	19.13	12.20

(a) Includes the Australian Capital Territory.

#### Exports of oats

#### OATS: EXPORTS, AUSTRALIA, 1967-68 TO 1971-72

		1967-68	1968-69	1969-70	1970-71	1971-72
Quantity	'000 bus	10,033	18,373	12,086	30,640	18,132
Value	\$'000 f.o.b.	8,408	13,042	7,559	23,827	12,425

In 1971-72 the principal countries of destination were Japan (12,581,000 bushels), Italy (1,561,000 bushels), the Federal Republic of Germany (1,647,000 bushels) and the Netherlands (1,620,000 bushels).

#### World production of oats

The world production of oats for the year 1972, according to preliminary figures issued by the United States Department of Agriculture, amounted to 2,706 million bushels, harvested from 74.2 million acres, resulting in an average yield of 36.1 bushels an acre. This compared with an estimated production in the previous year of 3,015 million bushels from an area of 74.9 million acres and an average yield of 40.3 bushels an acre. The main producers are Canada, West Germany and Poland, with Australia producing about 3 per cent of the world total. On occasions in recent years Australia has been the world's largest exporter.

### Barley

This cereal contains two main groups of varieties, 2-row and 6-row. The former is generally, but not exclusively, preferred for malting purposes. Barley is grown principally on pasture land worked up early in the year of sowing. In this way it forms an important phase in the rotation of crops. Like oats, it may also be sown for fodder production or for grain. When sown for fodder, sowing may take place either early or late in the season, as it has a short growing period. It may thus provide grazing or fodder supplies when other sources are not available. Barley grain may be crushed to meal for stock or sold for malting.

Crops sown for malting purposes require a combination of light textured soil of moderate fertility, reliable rainfall, and mild weather during ripening. The main barley-growing areas in Australia are situated in South Australia (South Adelaide Plains, Eyre and Yorke Peninsulas), but considerable quantities are grown also in New South Wales, Victoria, Queensland and Western Australia. There are State statutory marketing boards operating in all mainland States.

### Barley Boards

The bulk of the barley crop in the various States is acquired and marketed by grower-controlled boards. Pooled returns from sales are distributed to growers at standard rates for the individual grades and varieties delivered. The Victorian and South Australian crops are marketed by the Australian Barley Board (a joint board established by the two State Governments), and the Queensland and Western Australian Barley Boards handle the crops of their respective States. A marketing board was established in New South Wales in 1971 after a poll of growers. Particulars of the proportion of barley production which was received by the Australian Barley Board (for Victoria and South Australia), together with details of quantity sold, advances and total payments to growers, are presented below.

#### AUSTRALIAN BARLEY BOARD: BARLEY RECEIVED, SOLD, ETC. 1967-68 TO 1971-72

Pool		Quantity received	Quantity sold(a)	Total advances per bushel(b)	Net payments to growers
		'000 bushels	'000 bushels	\$	\$'000
No. 29 (1967-68 Crop)	. . .	7,985	7,975	1.1912	7,511

„ 33 (1971-72 „ )	. . .	50,045	49,573	0.9100	(c)35,592

(a) Includes surplus or shortage in out-turn except for No. 33 Pool for which the sales are not yet complete. (b) 2-row No. 1 Grade (bulk) less freight. (c) As at 28 February 1973. At that date it was estimated that the amount still to be paid to growers was 5 cents per bushel.

### Barley area, production and yield per acre

Since the imposition of wheat quotas for the 1969-70 season, the area of barley sown for grain has increased substantially. The area sown in 1971-72 was 6,265,000 acres, which was 27 per cent more than the previous record acreage of 4,942,000 acres in 1970-71. The production of barley for grain in 1971-72, 135,153,000 bushels, was a record and was 30 per cent more than the previous record production of 103,650,000 bushels in 1970-71. The area, production and yield per acre of barley for grain in the several States for the years 1967-68 to 1971-72 are shown in the following table. Separate details for 2-row and 6-row varieties are shown for all States for 1971-72.

(a) 50 lb per bushel.

For Australia, 80 per cent of the area of barley for grain in 1971-72 was sown with 2-row barley. The proportion, however, varied considerably in the several States. The utilisation of barley during the season ended November 1972 was as follows: exports, 76,991,000 bushels; pearl barley, 140,000 bushels; seed 9,000,000 bushels.

The production of barley in Australia since 1940-41 is shown in plate 42, above and a map showing the distribution of barley growing areas throughout Australia in 1962-63 appears on page 1014 of Year Book No. 50. The area sown to barley from 1900-01 to 1970-71 is shown in plate 39, page 746 of Year Book No. 58.

#### Value of barley crop

The average wholesale price for 2-row English malting barley in the Melbourne market was \$1.46 per bushel in 1971-72 compared with \$1.43 in 1970-71. The estimated gross value of the barley crop in each State for the 1971-72 season and the value per acre are shown in the following table.

**BARLEY FOR GRAIN: VALUE OF CROP, STATES, 1971-72**

		<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Aust.</i>
Aggregate value	. \$'000	17,727	15,689	9,933	40,295	39,223	1,310	124,177
Value per acre	. \$	19.21	21.46	25.34	20.81	17.42	42.16	19.82

#### Exports of barley

South Australia is the principal exporting State, and Taiwan, Japan, the United Kingdom, the Republic of Korea and the Federal Republic of Germany were the principal countries to which barley was shipped in 1971-72. Particulars of exports of Australian-produced barley for the years 1967-68 to 1971-72 are shown in the following table.

**BARLEY: EXPORTS, AUSTRALIA, 1967-68 TO 1971-72**

		<i>1967-68</i>	<i>1968-69</i>	<i>1969-70</i>	<i>1970-71</i>	<i>1971-72</i>
Quantity	. . . '000 bus	5,701	19,871	27,880	49,515	80,463
Value	. . . \$'000 f.o.b.	6,569	18,246	22,766	50,820	74,344

In addition to exports of barley grain, there are also exports of Australian pearl and Scotch barley, the total for 1971-72 amounting to 455,000 lb, valued at \$14,000, the main countries of consignment being Papua New Guinea, Singapore and Mauritius.

#### Barley malt

Details of the recorded usage of barley and the production of barley malt in the years 1967-68 to 1971-72 are given in the following table.

**BARLEY MALT: GRAIN USED AND MALT PRODUCED, AUSTRALIA  
1967-68 TO 1971-72**

		<i>1967-68</i>	<i>1968-69</i>	<i>1969-70</i>	<i>1970-71</i>	<i>1971-72</i>
Barley used	. . . '000 bus(a)	13,003	14,066	13,761	n.a.	n.a.
Malt produced	. . . '000 bus(b)	13,547	13,825	14,428	17,404	20,469

(a) 50 lb per bushel. (b) 40 lb per bushel.

Since 1952-53 the production of malt in Australia has been sufficient to meet local requirements and to provide a margin for export. Exports of Australian produce amounting to 8,216,000 bushels (value \$15,437,000) and 9,389,000 bushels (value \$19,193,000) were recorded in 1970-71 and 1971-72 respectively.

#### World production of barley

In comparison with the barley production of other countries that of Australia is extremely small. The main producers in 1972 were the Union of Soviet Socialist Republics, Canada, the United States of America, France and the United Kingdom. The People's Republic of China is also normally a major producer, but recent details are not available. Australian production in 1972 was approximately 2 per cent of the world total.

According to preliminary estimates made by the United States Department of Agriculture, world production of barley in the year 1972 amounted to 5,639 million bushels harvested from 187 million acres, equivalent to a yield per acre of 32.2 bushels. This compared with the production of 5,750 million bushels in the previous year from 178 million acres, giving a yield per acre of 32.2 bushels.

## Sorghum

The sorghums are summer growing crops which are used in three ways: grain sorghum for grain; sweet or fodder sorghum, sudan grass and more recently columbus grass for silage, green feed and grazing; and brook millet for brooms and brushware.

The growing of grain sorghum on an extensive scale did not attain a position of prominence until the last two decades. Operations are highly mechanised and, over the past three years, rapid increases in production have resulted in a substantial increase in exports. The grain is used primarily as stockfeed and is an important source for supplementing other coarse grains for this purpose.

The climatic conditions of Queensland and northern New South Wales are particularly suited to the growing of sorghums. In Queensland grain sorghum production is concentrated in the Burnett, Dawson-Callide areas and in the Central Highlands. In New South Wales the north-western slopes and the Murrumbidgee Irrigation Areas are the main areas. The crop is also being developed in north Queensland, in the Northern Territory, and in Western Australia.

In Queensland orderly marketing of the crop is arranged through the Central Queensland Grain Sorghum Marketing Board and the Grain Sorghum Export Committee of the Queensland Grain-growers Association. A State statutory marketing board commenced operations in New South Wales with the marketing of the 1972 crop.

GRAIN SORGHUM: AREA, PRODUCTION AND YIELD PER ACRE, STATES

(a) 60 lb per bushel. Production in New South Wales and Queensland (for years prior to 1968-69) harvested from crop sown in previous year. (b) Includes small areas sown and quantities produced in other States and Territories. Excludes Northern Territory for 1967-68, 1968-69 and 1969-70.

## Maize

Like sorghum, maize is a summer cereal demanding specific soil and climatic conditions. For grain, growing is almost entirely confined to the south-east regions and Atherton Tablelands of Queensland and the north coast and northern tablelands of New South Wales. On the Atherton Tablelands in Queensland, and generally in New South Wales and Victoria, the cereal provides a stock feed for dairy cattle, fat stock, poultry and pigs. In times of drought it is used also as a sheep feed. In all States except South Australia, however, this crop is grown to some extent for green feed and silage, particularly in connection with the dairying industry. There is practically no difference between grain and fodder varieties.

There has been a continuing increase in recent years in the growing of maize from hybrid strains of seed. Varieties have been developed which are capable of producing yields per acre considerably in excess of the older open pollinated types. The expansion in areas sown to hybrid maize has led to a parallel development in the specialised industry of growing hybrid strains for seed.

A State statutory board controls marketing in the Atherton Tablelands area of Queensland. Elsewhere, marketing is in the hands of private merchants.

1971-72	54.8	80.6	34.9	..	61.8	..	..	43.6

(a) 56 lb per bushel. Production in New South Wales and Queensland (for years prior to 1968-69) harvested from crop sown in previous year.

The average yield for Australia for the five-year period ended 1971-72 was 38.5 bushels per acre. Among principal producing countries, the United States of America averaged 96.9 bushels per acre and Brazil 20.6 bushels for 1972.

## Value of maize crop

The average wholesale price of maize in the Melbourne market in 1971-72 was \$2.81 per bushel compared with \$2.48 in 1970-71. The estimated gross value of the crop in each State for the 1971-72 season and the value per acre were as follows.

## MAIZE FOR GRAIN: VALUE OF CROP, STATES, 1971-72

### World production of maize

According to figures issued by the United States Department of Agriculture, world production of maize in the year 1972 amounted to an estimated 11,181 million bushels, harvested from 264.4 million acres, giving an average yield per acre of 42.3 bushels. This compared with production in the previous year of 11,378 million bushels from 274.3 million acres, and an average yield of 41.5 bushels per acre.

The United States of America is the most important maize-producing country in the world, and during the four years ended 1970 the area sown to maize in that country averaged 57.1 million acres or 22 per cent of the world total. During the same period production averaged 4,449 million bushels or 45 per cent of the world total.

### Rice

The principal rice-growing areas of the world are confined almost entirely to Asia, although limited quantities are grown in other countries. In Australia rice was first cultivated at the Yanco Experimental Farm in New South Wales, but it was not grown commercially until 1924-25, when 16,240 bushels were produced from 153 acres. Favoured by high average yields and protected by tariff, rice culture made rapid progress in the Murrumbidgee Irrigation Areas until local requirements were met and a surplus became available for export. The acreage sown in this area is controlled, as the quantity of water available is limited.

Apart from small experimental areas in Western Australia and the Northern Territory, rice-growing in Australia is practically confined to the Murray and Murrumbidgee Irrigation Areas in New South Wales and recently, the Burdekin area of Queensland. In 1971-72, the largest purchasers of Australian rice were Papua New Guinea, Hong Kong and Chile. Details relating to area, production, and Australian-produced exports for the years 1967-68 to 1971-72 are shown in the following table.

**RICE: AREA, PRODUCTION AND EXPORTS, AUSTRALIA(a)**  
1967-68 TO 1971-72

Year		No. of holdings growing rice(b)	Area	Production (paddy rice)		Average yield (paddy) per acre	Imports	Exports
				Quantity	Gross value(c)

1971-72	.	1,541	100,063	12,710	12,842	127.0	847	398,055

(a) For some years particulars of area and production for Western Australia and the Northern Territory are not available for publication, and are excluded. (b) Twenty acres or more in area. (c) Excludes the value of straw. (d) 42 lb per bushel.

### Fodder crops

#### Hay

As well as crops grown specifically for grain, considerable areas of Australia are devoted to fodder crops. These crops are utilised either for grazing (as green feed), or conserved as hay, ensilage, etc.

This development of fodder conservation as a means of supplementing pasture and natural sources of stockfeed is the result of the comparatively unreliable nature of rainfall in Australian agricultural and pastoral areas.

The following tables show statistics for hay, green feed, and silage produced.

(a) Includes 930 tons in the Northern Territory.

Under normal conditions, hay, whether whole or in the form of chaff, is somewhat bulky for overseas trade, and consequently does not figure largely among Australian exports. During 1971-72 exports amounting to 12,674 tons, valued at \$503,000, were made, principally to Kuwait, Iran, Singapore and Japan. Imports of hay are not recorded separately, but are considered to be negligible.

(a) Includes 1,250 tons in the Northern Territory.

(b) Includes 580 tons in the Northern Territory.

## Sugar cane

The growing of sugar cane is restricted to those coastal areas in Queensland and northern New South Wales which have suitable climatic and soil conditions.

The Bureau of Sugar Experiment Stations in Queensland and the Colonial Sugar Refining Company Limited render useful service to the sugar industry by advocating and demonstrating better methods of cultivation and the more scientific use of fertilisers, lime, etc. and by producing and distributing improved varieties of cane. In common with these two organisations, Sugar Research Ltd, of Mackay, undertakes technological research in raw sugar milling practices.

### Sugar agreements and marketing arrangements in Australia

In Year Book No. 37, pages 940-1, a summary is given of the form of agreement which operates between the Commonwealth and Queensland Governments in respect of the sugar industry in Australia. Briefly, the agreement places an embargo on sugar importations and fixes the maximum wholesale price of sugar consumed in Australia. The current agreement, which replaced the 1962 agreement is for the period from 1 July 1969 to 30 June 1974 and prescribes maximum wholesale prices for sugar (delivered State capital cities, Launceston and Fremantle) approximately equivalent to a retail price of 10.5 cents per lb.

Production of sugar is regulated under the terms of the agreement. At the mill level control is exerted by means of seasonal 'mill peaks' in respect of Queensland mills and a proportionate allowance for New South Wales mills. The combined total equals the estimated requirements of the domestic and export markets. Farm production is regulated according to the limit on the mill which the farm supplies. Exports are limited by the export quota provisions of the International Sugar Agreement (*see below*).

The Queensland Government acquires the whole of the sugar production of that State and of New South Wales by legislation and private agreement respectively. The net proceeds of all sugar sold are pooled and uniform prices paid to mills. Production for 1972-73 is estimated to be 2,773,000 tons 94 net titre, of which New South Wales is expected to contribute approximately 101,000 tons.

### International Sugar Agreement

The International Sugar Agreement of 1937 was superseded by the International Sugar Agreements of 1953, 1958 and 1968. Details of the 1937, 1953 and 1958 Agreements were given in Year Books No. 40, pages 881-2, No. 48, page 936 and No. 54, page 892 respectively.

The 1968 International Sugar Agreement came into force on 1 January 1969, its term of operation being for five years from that date. Like its predecessors, the 1968 Agreement is built around a schedule of export quotas governing the net exports of exporting members to the world 'free' market. The Agreement is designed to maintain a balance between total world free market supply and demand by adjustments to the level of quotas in effect of exporting members. Quotas in effect cannot be adjusted downwards below 90 per cent of basic export tonnages except in exceptional circumstances where adjustments down to 85 per cent may be possible.

Quota adjustments under the Agreement must take account of the prices (meaning 'prevailing prices' as defined by the Agreement) ruling in the world free market. The quota adjustment provisions pivot around a world free market price of U.S. four cents per pound f.o.b. and stowed Caribbean port, in bulk. When the price is below U.S. four cents, the system is designed to provide an upward pressure on prices by quota reductions. When the price is above U.S. four cents, the system is designed to apply a downward pressure on prices by increases in the level of quotas in effect above basic export tonnages.

Under the Agreement, exporters are required to establish and maintain certain levels of minimum stocks which are only to be released to the market when the price rises above U.S. 4.75 cents. If the price rises above U.S. 5.25 cents, all quota restraints become inoperative, but if the price rises above U.S. 6.50 cents, exporters are required to supply their traditional importing members with certain historical quantities of sugar at prices not exceeding the commercial equivalent of U.S. 6.50 cents, subsequently raised to U.S. 6.95 cents owing to the U.S. currency devaluation.

If the price is below U.S. 3.50 cents, minimum export quotas in effect are to apply, while at prices below U.S. 3.25 cents, members are obliged to prohibit imports from non-member countries.

Australia has a basic export tonnage under this Agreement of 1,100,000 metric tons raw value (about 1,040,000 long tons of actual raw sugar) and is obliged to establish a minimum level of uncommitted stocks amounting to 15 per cent of this quantity. However, owing to the high world price of sugar and under the terms of the Agreement, all export quotas and other restrictions on

the export of sugar were suspended on 21 December 1971 and remained suspended throughout the whole year 1972. On 17 January 1972, for the same reasons, exporting member countries' minimum stocks were released for prompt sale and prompt shipment. In November 1972 the International Sugar Council decided not to allocate initial export quotas for 1973 or fix at that stage any other limitations on exports for 1973.

Australian exports of negotiated price sugar to the United Kingdom under the British Commonwealth Sugar Agreement, and to the U.S.A. market, are not controlled by the International Sugar Agreement.

In 1971, in accordance with the Agreement, member countries reviewed its operation. They made no change in basic export tonnages and price levels, but listed a number of points which would require consideration when the Agreement is renegotiated in 1973.

#### **British Commonwealth Sugar Agreement**

On 1 January 1953 the British Commonwealth Sugar Agreement became effective. A triennial review of the Agreement was held late in 1971, and in the expectation of the United Kingdom entering the European Economic Community, the negotiations were concluded on the understanding that the Agreement would terminate at the end of 1974. Under the Agreement Australia has a Negotiated Price Quota of 335,000 tons per annum to the United Kingdom. The negotiated price for Australian sugar had remained at £Stg. 43.10.0 per long ton f.o.b. and stowed, bulk sugar 96° polarisation, for the years 1966 to 1971. The price was increased to £Stg. 50 for 1972, 1973 and 1974.

The Agreement also allows Australia an adjusted Overall Agreement Quota (including the negotiated price quota) of 630,000 tons per annum, which can be adjusted from time to time as a result of re-allocations of other Commonwealth Sugar Agreement exporters. The balance of this quota over the negotiated price quota may be sold to preferential markets on the basis of the world market price plus preference, as part of Australia's export quota under the International Sugar Agreement.

#### **Exports to the United States of America**

Australian exports to the U.S.A. are governed by United States legislation at present covering the three years to the end of 1974. These exports are sold on the U.S. domestic raw sugar market, the supplies to which are regulated with a view to ensuring stable and equitable prices, independently of prices ruling elsewhere in the world.

Australian export entitlements to this market vary from year to year. In 1972 Australia's entitlement totalled 180,360 long tons of raw sugar and at 23 February 1972 our 1973 entitlement stood at 175,680 long tons raw value.

#### **Fruit Industry Sugar Concession Committee and sugar rebates**

The Fruit Industry Sugar Concession Committee was established by agreement between the Commonwealth and Queensland Governments and administers a fund provided from contributions by the Queensland Government on behalf of the sugar industry.

Until 15 May 1960 a domestic rebate of \$4.40 a ton of refined cane sugar used in processing approved fruit products was paid to Australian manufacturers, provided they bought fresh fruit for processing at prices not lower than those declared by the Committee as reasonable. This was increased to \$10 a ton from 16 May 1960 and to \$15 from 1 July 1969.

An export sugar rebate is also paid by the Committee to exporters of approved fruit products to ensure that manufacturers do not pay higher prices for the Australian sugar content than the Australian equivalent of the world sugar parity price. The Queensland Government is responsible for payment of a similar rebate to exporters of other approved products. Payment of the export sugar rebate in respect of approved fruit products has been made conditional upon satisfactory arrangements having been made for payment for the fresh fruit used for processing at not less than the prices (if any) which the Committee has declared to be reasonable.

Under the Sugar Agreement 1969 the Queensland Government contributes \$924,000 to the fund annually, out of which the Committee pays the domestic sugar rebate on approved fruit products manufactured. The Queensland Government also reimburses the Committee for the latter's payments of the export rebate paid on approved fruit products which are subsequently exported. Any money remaining in the fund after the payment of rebates and administrative expenses may be used by the Committee for the promotion of the use and sale of fruit products, or for research for the purpose of increasing the yield per acre of Australian fruit, or of obtaining information regarding Australian marketable fresh fruits.

### Financial assistance to the sugar industry

Under the provisions of the *Sugar Marketing Assistance Agreement Act 1967* and the *Sugar Industry Assistance Act 1967* the Commonwealth Government arranged two loans to assist the returns from No. 1 Pool in the 1966 and 1967 seasons. The total amount of \$23,327,590 so advanced is repayable over ten years commencing in mid-1971, and was not subject to interest before then. Thereafter it incurs interest at the rate of five per cent per annum.

### Bulk handling of sugar

Bulk handling and mechanised loading and unloading of raw sugar is now in operation throughout the Australian sugar industry. Terminals for the bulk loading of sugar were opened at Mackay in 1957, at Lucinda and Bundaberg in 1958, at Townsville in 1959, at Mourilyan in 1960, and at Cairns in 1964. A second storage shed at Bundaberg, a third shed at Mackay, second sheds at Lucinda, Townsville and Cairns, and an extension at Mourilyan have been opened subsequently to give a total bulk storage capacity of 1,449,000 long tons. The comparatively small New South Wales sugar industry was converted to bulk handling in 1954. Bulk receiving facilities are in operation at all Australian refineries.

### Mechanisation

Mechanisation of harvesting processes has been gradually developed and has been accelerated in recent years. In Queensland the proportion of the crop mechanically cut rose from 8.7 per cent in 1962 to 98.78 per cent in 1972 while the proportion mechanically loaded on to the transport conveying cane to mills rose from 64.5 per cent to 99.95 per cent in the same period. Chopper harvesters, which chop cane into short lengths and pour it into bins hauled alongside, harvested 92.56 per cent of the crop, and whole-stalk harvesters, which cut the cane at the base and deposit the whole stalks in bundles, cut 6.29 per cent. In New South Wales, mechanical harvesting is not employed as extensively as in Queensland but is being used on an increasing scale.

### Area of sugar cane

A brief outline of the development of the industry was included in earlier issues of the Year Book (*see* No. 38, page 985). The area of sugar cane in Australia for the seasons 1967-68 to 1971-72 is shown in the following table. The areas shown in the table exclude a very small acreage cut for green feed prior to 1971-72. The whole area planted is not cut for crushing during any one season, there being always a considerable amount of young and 'stand-over' cane as well as a small quantity required for plants.

SUGAR CANE: AREA(a), STATES, 1967-68 TO 1971-72  
(Acres)

Year	New South Wales			Queensland			Australia			Total
	Area crushed	Area of standover and newly- planted cane	Area cut for plants	Area crushed	Area of standover and newly- planted cane	Area cut for plants	Area crushed	Area of standover and newly- planted cane	Area cut for plants

1971-72	23,055	18,330	662	554,521	77,514	12,164	577,576	95,844	12,826	686,246

(a) Excludes areas cut for green fodder prior to 1971-72.

### Production of cane and sugar

The production of sugar cane in 1971-72 was 19,084,000 tons, which was 671,000 tons above the previous record production in 1968-69. The production of raw sugar from 1940-41 is shown in plate 43, following.

**SUGAR CANE: PRODUCTION OF CANE AND RAW SUGAR, STATES, 1967-68 TO 1971-72**  
(Tons)

Year	New South Wales		Queensland		Australia	
	Cane	Sugar(a)	Cane	Sugar(a)	Cane	Sugar(a)
1967-68 . . .	1,038,507	120,583	15,717,789	2,213,810	16,756,296	2,334,393
1968-69 . . .	997,813	120,381	17,414,966	2,604,319	18,412,779	2,724,700

(a) Raw sugar at 94 net titre.

PLATE 43

Climatic conditions in New South Wales are such that the crop matures in from twenty to twenty-four months, whereas in Queensland a period of from twelve to sixteen months is sufficient. The average yields of cane and sugar per acre for the years 1967-68 to 1971-72 are shown below. Allowance should be made in interpreting these figures for the disparity in maturing periods noted above.

**SUGAR CANE AND SUGAR: YIELD PER ACRE, STATES, 1967-68 TO 1971-72**  
(Tons)

Year	New South Wales			Queensland			Australia		
	Cane per acre crushed	Sugar per acre crushed	Cane to each ton of sugar	Cane per acre crushed	Sugar per acre crushed	Cane to each ton of sugar	Cane per acre crushed	Sugar per acre crushed	Cane to each ton of sugar
1967-68 . . .	46.82	5.44	8.61	29.61	4.17	7.10	30.30	4.22	7.18
1968-69 . . .	45.00	5.43	8.29	31.88	4.77	6.69	32.39	4.79	6.76
1969-70 . . .	42.10	4.93	8.55	29.05	4.11	7.06	29.54	4.14	7.13

1971-72 . . .	41.84	5.29	7.91	32.68	5.03	6.50	33.04	4.76	6.94

### Production and utilisation of sugar

Details of the production and utilisation of sugar for the years 1967-68 to 1971-72 are shown below. Consumption is shown in terms of refined sugar, including that consumed in manufactured products.

#### SUGAR: PRODUCTION AND UTILISATION, AUSTRALIA, 1967-68 TO 1971-72

Year		Changes in stocks(a)	Production (raw)(b)	Exports(c)	Miscel- laneous uses(d)	Consumption in Australia(e)	
						Total	Per head
		'000 tons	'000 tons	'000 tons	'000 tons	'000 tons	lb
1967-68	. . .	+170.0	2,393.9	1,634.8	20.8	568.3	106.7
1968-69	. . .	n.a.	2,563.2	2,058.4	n.a.	584.7	107.6
1969-70	. . .	n.a.	2,167.1	1,387.9	n.a.	609.1	109.6
1970-71	. . .	n.a.	2,413.0	1,571.6	n.a.	626.2	110.4
1971-72	. . .	n.a.	2,538.6	1,994.4	n.a.	635.4	110.6

(a) Includes allowance for estimated sugar content of imported foodstuffs. (b) Year ended June; *tel quel* basis. Not comparable with production figures shown in production table as those relate to year ended March on a 94 net titre basis. (c) Raw and refined, including ships' stores and sugar in exported foodstuffs. (d) Includes refining losses and quantities used in golden syrup and treacle. (e) Includes sugar content of manufactured products consumed.

The quantity of sugar recorded as used in factories amounted to 359,978 tons in 1968-69, 373,380 tons in 1969-70 and 405,899 tons in 1971-72. Statistics for 1970-71 are not available. Particulars of sugar used in establishments not classified as factories are not available, and consequently these quantities are deficient to that extent. In 1971-72 the reported consumption by factories engaged in the production of jams, jellies and preserved fruit and vegetables amounted to 77,875 tons, by those producing confectionery, ice cream, etc., to 82,117 tons, by breweries to 42,875 tons, and by factories producing aerated waters, cordials, etc., to 96,625 tons. Of the remainder, 35,875 tons was used in the production of biscuits, cakes and pastries, 30,781 tons in the production of cereal foods and the preparation of flour and baking mixes, and 39,751 tons used in various other industries.

### Sugar prices and returns

The current prices of sugar in Australia (as determined under the Sugar Agreement in Australia, see page 782) and details of net returns for raw sugar from 1967-68 to 1971-72 are shown in the following tables.

#### SUGAR: PRICES IN AUSTRALIA

Year	Raw sugar, 94 net titre			Refined sugar		
	Average return per ton received by millers and growers for—			Date of determination	Wholesale price to retailer per ton	Retail price capital cities per lb
	Home consumption	Exports(a)	Whole crop(a)			
	\$	\$	\$		\$	cents
1968-69(b)	143.20	63.04	82.10	19.6.67	206.72	10.5
1969-70(b)	143.10	80.83	99.76			
1970-71(c)	140.30	87.83	102.34			
1971-72(c)	138.70	100.94	110.35			
1972-73(c)	137.10	114.06	119.85			

(a) Includes 'excess' sugar. (b) Excludes repayable Commonwealth arranged loan (see page 784). (c) Includes repayment of Commonwealth loan.

## RAW SUGAR(a): NET RETURNS, AUSTRALIA, 1967-68 TO 1971-72

(Source: The Queensland Sugar Board)

Year	Proportion exported	Net value of exports per ton	Average price per ton for whole crop	Estimated value of crop
	per cent	\$	\$	\$'000
1967-68 . . .	72.89	59.45	82.05	191,471
1968-69 . . .	76.23	63.04	82.10	223,638
1969-70 . . .	69.61	80.83	99.76	217,279
1970-71 . . .	72.36	87.83	102.34	254,191
1971-72 . . .	75.09	100.94	110.35	303,290

(a) 94 net titre.

The estimated value of the raw sugar produced has been based upon details taken from the audited accounts of the Queensland Sugar Board. The values stated comprise the gross receipts from sales in Australia and overseas, less refining costs, freight, administrative charges, etc., and export charges. They include concessions to the fruit industry and other rebates, which in 1971-72 amounted to \$2,758,000, and also payment of the first instalment of the repayable Commonwealth grants referred to earlier. The value thus obtained represents the net market value of all raw sugar sold, which, less the rebates, is divided between the growers and millers in the approximate proportions of 70 per cent and 30 per cent respectively.

## Exports of sugar

## RAW AND REFINED SUGAR: EXPORTS, AUSTRALIA, 1967-68 TO 1971-72

	1967-68	1968-69	1969-70	1970-71	1971-72
Quantity . . . . . tons	1,597,235	2,029,177	1,364,302	1,546,372	1,976,270
Value . . . . . \$'000 f.o.b.	97,582	122,214	116,114	149,636	210,593

## Tobacco

Tobacco is a summer-growing annual which requires a temperate to tropical climate, adequate soil moisture and a frost-free period of approximately five months. In Australia almost all tobacco is grown under irrigation. Because of specialised requirements, production is limited to areas with suitable soils and climate. The main centres of production are the Mareeba-Dimbulah districts of north Queensland and Myrtleford in north-eastern Victoria. Other areas where tobacco is grown include Bundaberg, Beerwah and Texas (Queensland), Ashford (New South Wales) and Wangaratta (Victoria). All tobacco grown in Australia is of the flue-cured type except for small quantities of burley tobacco produced mainly in Victoria.

## Marketing

Between 9 May 1941 and 24 September 1948 all leaf was under the direct control of the Australian Tobacco Board, and prices were paid on leaf appraisal. Subsequently the Board was disbanded, and sales have been by open auction through the Tobacco Leaf Marketing Board (Queensland and northern New South Wales) and the Victorian Tobacco Growers Association Ltd (southern New South Wales and Victoria). In 1964 the Victorian Tobacco Leaf Marketing Board was set up to market the portion of the crop that was formerly sold by the Victorian Tobacco Growers Association Ltd, and in 1965 a Board was established in New South Wales. However, the actual physical handling of New South Wales leaf at auction is carried out by the Queensland and Victorian authorities.

In 1965 the Commonwealth and State Governments agreed to a stabilisation plan for the tobacco growing industry with an annual marketing quota of 26 million pounds (green weight) of leaf to be sold under an agreed grade and price schedule providing for an average minimum price, based on normal crop fall-out. The overall marketing quota is divided among tobacco-producing States according to a formula approved by the Australian Agricultural Council. The determination of grower disputes in regard to quotas from State allocations is the responsibility of State Quota Committees.

In 1968, the final year of the plan, the Governments concerned agreed that it should continue for a further period of five years with an increased marketing quota for the 1969 selling season of 28.5 million pounds, which was subsequently increased to 31.5 million pounds to correct industry stockholdings which were depleted by higher than expected manufacturer usage. Provision was made for an annual review of the quota and in 1970 a basic quota of 34 million pounds which was set for the 1971 season was retained for the 1972 and 1973 seasons. Each quota is to be divided among the producing States in the same proportions as the original quota.

The plan is administered by the Australian Tobacco Board, constituted under the *Tobacco Marketing Act* 1965-66 and representative of the Commonwealth, tobacco-producing States, growers, and manufacturers.

The guaranteed average minimum Australian price for the 1971 and 1972 seasons, 114.5 cents per lb, is 5.5 cents per lb above the price set for the 1970 season.

#### **Central Tobacco Advisory Committee**

The Australian Agricultural Council formed the Standing Advisory Committee on Tobacco during 1950. This Committee consisted of representatives of tobacco growers, tobacco manufacturers and the Commonwealth and State Governments. Its main functions were to review the industry and make recommendations on factors affecting its development and progress. The Committee was reconstituted as the Central Tobacco Advisory Committee in 1952-53.

In order to receive funds for increased research and extension activities, the Tobacco Industry Trust Account was established by the *Tobacco Industry Act* 1955-65 and came into operation on 2 December 1955. Growers and manufacturers contribute to the Trust Account by way of levies imposed on Australian leaf sold and purchased. These industry contributions are matched by the Commonwealth Government with payments made as funds are expended. The Governments of the three tobacco producing States make fixed annual contributions. Money standing to the credit of the Account may be applied for the purpose of research and investigation in connection with the tobacco industry, the training of personnel and the publication and dissemination of scientific and technical information for the industry.

The Central Tobacco Advisory Committee is required to make recommendations to the Minister for Primary Industry in regard to expenditure from the Tobacco Industry Trust Account. By 30 June 1972 expenditure from the Account amounted to \$8.3 million, and allocations for support of research projects in 1971-72 totalled \$893,251.

#### **Tobacco research and extension**

The Commonwealth Scientific and Industrial Research Organization and the State Departments of Agriculture in the tobacco growing States are carrying out investigations into a wide range of problems involving fundamental and applied research in plant breeding and variety evaluation, nutrition, disease and pest control, and cultural practices. The State Departments also provide extension services for tobacco growers. A Mechanisation Sub-Committee of the Central Tobacco Advisory Council was established in 1970 to investigate and advise on practical aspects of mechanisation of the tobacco-growing industry.

Details of the recommendations by the Tobacco Inquiry Committee and grants periodically approved by the Commonwealth Government up to 30 June 1953 are given in Year Book No. 40, pages 895-6, and in previous issues.

#### **Tobacco factories**

Manufacturers of Australian cigarettes and tobacco are granted a lower rate of duty on imported tobacco leaf, provided it is blended with a prescribed minimum percentage of Australian leaf. These percentages, which in November 1946 stood at 3 per cent for cigarettes and 5 per cent for tobacco, have been increased progressively in intervening years and since 1 January 1966 have been set at 50 per cent for both cigarettes and tobacco.

In 1971-72 the quantity of cured leaf recorded as used in tobacco factories in Australia amounted to 53 million lb, of which 29 million lb was of local origin. The balance was imported, chiefly from the United States of America.

#### **Tobacco area and production**

The area planted to tobacco in 1971-72 was 15.5 per cent below the record area established in 1962-63. Production at 35,306,000 lb was 6.5 per cent below the previous record established in 1970-71.

## TOBACCO: AREA AND PRODUCTION, STATES, 1967-68 TO 1971-72

Year		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
AREA (ACRES)								
1967-68	.	1,831	8,664	12,472	..	..	..	22,967
1968-69	.	2,190	9,727	13,837	..	..	..	25,754
1969-70	.	2,739	11,015	12,908	..	..	..	26,662
1970-71	.	3,042	10,481	13,411	..	..	..	26,934
1971-72	.	3,146	9,499	12,178	..	..	..	24,823
PRODUCTION OF DRIED LEAF ('000 lb)								
1967-68	.	2,075	7,625	15,021	..	..	..	24,721
1968-69	.	2,481	12,075	19,517	..	..	..	34,072
1969-70	.	3,061	15,516	18,975	..	..	..	37,553
1970-71	.	2,800	15,215	19,745	..	..	..	37,761
1971-72	.	4,090	12,709	18,507	..	..	..	35,306

**Imports and exports of tobacco**

Imports of tobacco and tobacco manufactures into Australia during 1971-72 were valued at \$28.2 million. This included 26.9 million lb of unmanufactured tobacco valued at \$18.2 million. Exports of tobacco and tobacco manufactures during 1971-72 were valued at \$4,168,000, including Australian produce, \$3,412,000.

**Cotton**

This annual shrub requires a hot climate and inter-row weed control. Lint (long fibres) is extracted from the seed cotton in the ginneries and is used for yarn. The residue, consisting of linters (short fibres), kernels and hulls (outer seed coat), is treated in oil mills. Linters are used in the manufacture of felts and other materials, where fibre length is of little importance. The kernels when crushed produce an oil which is used for both edible and industrial purposes. The residual meal is a useful high protein stockfeed; the hulls may be used as fuel.

Until 1964 cotton growing was mainly confined to Queensland, most of it being grown under conditions of natural rainfall. Since then there has been an increasing trend in the use of irrigation. A sound industry has been established in the Namoi and Macquarie Valleys in New South Wales with water provided by the Keepit and Burrendong Dams. More than three-quarters of Australia's raw cotton requirements are now produced in that area. Cotton is also grown under irrigation in Queensland and on the Ord River of Western Australia and to a lesser extent in the Murrumbidgee Irrigation Areas of New South Wales. Nearly all Australian cotton is now grown with the assistance of irrigation and acreage yields compare more than favourably with those obtained by traditional overseas cotton producing countries. Australian production currently satisfies all the requirements of local mills for short and medium staple cotton and should in the future, supply the comparatively small quantities of longer staple combing cottons currently imported. Cotton production in 1972 was 192,000 bales with an export surplus of some 75,000 bales. The 1973 cotton crop is estimated at around 197,000 bales with approximately 90,000 bales available for export.

**Cotton bounty**

For particulars of the *Cotton Bounty Act* 1951-1958, see page 1044 of Year Book No. 49. This Act was replaced by the *Raw Cotton Bounty Act* 1963-1966 under which the Commonwealth agreed to pay a bounty on raw cotton produced and sold for use in Australia at the rate of 13.4375 cents per lb for Middling 1" White, with premiums and discounts on grades and staples above and below, up to a maximum of \$4 million in any one year, for a period of five years from 1 January 1964. In 1968 this Act was amended to extend bounty payments to all cotton produced in Australia of a grade higher than Strict Good Ordinary, whether used in Australia or not, provided it has a staple length of  $\frac{7}{8}$ " or greater. The Commonwealth Government has phased out the bounty assistance. The maximum bounty remained at the previous level of \$4 million for 1969, falling to \$3 million in 1970, and was \$2 million in 1971 the final year in which it was paid.

## Cotton area and production

COTTON: AREA, PRODUCTION AND YIELD PER ACRE, STATES AND TERRITORIES  
1967-68 TO 1971-72

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

1971-72	222,276	..	40,972	..	24,849	..	..	..	288,097
YIELD PER ACRE (lb)									
1967-68	3,180	..	1,610	..	2,203	..	..	..	2,793
1968-69	2,907	..	2,108	..	2,589	..	..	..	2,744
1969-70	2,449	..	2,011	..	2,885	..	..	..	2,414
1970-71	1,305	..	1,490	..	3,257	..	..	..	1,524
1971-72	3,069	..	2,404	..	2,605	..	..	..	2,910

NOTE. Before 1968-69 production in Queensland relates to the crop harvested in the first of the years mentioned, and in other States to the year following: e.g., for 1967-68, the Queensland crop was harvested during 1967, while the crop in other States was harvested during 1968.

Production of ginned cotton for 1966-67, was 35,510,000 lb; 1967-68, 70,405,000 lb; 1968-69, 74,035,000 lb; 1969-70, 70,271,000 lb; and 1971-72, 85,905,000 lb. Figures for 1970-71 are not available.

The gross value of cotton for the five years ended 1971-72 was \$19,675,000; \$20,753,000; \$18,979,000; \$14,015,000; and \$29,794,000 respectively.

## RAW COTTON(a): IMPORTS AND EXPORTS, AUSTRALIA 1967-68 TO 1971-72

	1967-68	1968-69	1969-70	1970-71	1971-72
Imports—					
Quantity . . . '000 lb	27,066	12,497	10,378	15,421	19,708
Value . . . \$'000 f.o.b.	6,866	3,766	3,003	4,314	5,783
Exports—					
Quantity . . . '000 lb	n.a.	n.a.	25,445	16,351	5,338
Value . . . \$'000 f.o.b.	n.a.	n.a.	5,124	3,431	1,555

(a) Excludes linters.

Japan and Indonesia were the principal importing countries, taking 3,062,000 lb and 1,623,000 lb respectively in 1971-72.

## Peanuts

Peanuts, or groundnuts, are a sub-tropical legume (and hence summer growers), the pods of which mature beneath the surface of the soil. They thus require well drained, light textured soils. At harvest the plant is pulled, wind-rowed, field-cured for two to four weeks, and then threshed to recover the pods. The main products of the industry are nuts, peanut oil and oil cake.

In Australia, peanuts for crushing for oil arise as a by-product in the production of nuts for edible purposes. The oil is used extensively as a cooking and salad oil and in the manufacture of margarine.

The production of peanuts in Australia is confined mainly to Queensland, although small quantities are grown in New South Wales, the Northern Territory and, in some years, Western Australia.

PEANUTS: AREA AND PRODUCTION, STATES, 1967-68 TO 1971-72

Year	Area (Acres)			Production (cwt)		
	N.S.W.	Qld	Aust.	N.S.W.	Qld	Aust.
1967-68 . . . .	353	61,373	61,738	3,920	602,207	606,159
1968-69 . . . .	183	78,454	(a)78,637	1,861	332,740	(a)334,601
1969-70 . . . .	232	82,789	(a)83,021	4,039	836,812	(a)840,851
1970-71 . . . .	390	94,895	95,343	5,151	607,172	612,618
1971-72 . . . .	561	82,744	(a)83,405	4,755	901,024	(a)906,664

(a) Incomplete: excludes Northern Territory.

The gross value of the 1971-72 crop was \$12,234,000 which was approximately \$4,236,000 more than in 1970-71. Total supplies available for consumption in Australia in 1971-72 were 23,329 tons in shell equivalent. Exports of peanuts and peanut products for the year were 1,563 tons.

## Flax

The flax plant is a summer-growing annual. Varieties have been developed for the production of either fibre or linseed, which when crushed yields an industrial oil used extensively in the manufacture of paint and linoleum. The introduction of synthetics into these fields has reduced the demand for linseed oil. Flax for the production of fibre was last recorded in 1964-65. Production of linseed during 1971-72 was 10,067 tons.

The main producing areas are the wheat belt of New South Wales, western and north-eastern districts of Victoria, the Esperance district of Western Australia and the Darling Downs in Queensland.

Particulars of area and production of flax for linseed, by States, are given in the following table for the years 1967-68 to 1971-72.

FLAX FOR LINSEED: AREA AND PRODUCTION, STATES, 1967-68 TO 1971-72

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Aust.
Area (acres)—						
1967-68 . . . .	9,947	9,365	27,764	516	6,886	54,478
1968-69 . . . .	15,164	14,304	21,459	1,025	18,645	70,597
1969-70 . . . .	49,455	18,880	21,513	977	30,812	121,637
1970-71 . . . .	50,751	16,877	8,786	695	25,751	102,860
1971-72 . . . .	23,206	9,127	4,626	424	11,845	49,228
Production (tons of linseed)—						
1967-68 . . . .	952	804	6,571	72	2,083	10,482
1968-69 . . . .	2,614	5,079	6,132	350	5,321	19,496
1969-70 . . . .	14,499	9,312	5,701	355	6,186	36,053
1970-71 . . . .	16,917	6,370	1,937	254	4,840	30,318
1971-72 . . . .	3,654	3,334	1,280	91	1,708	10,067

## Hops

Hops are grown from perennial rootstocks over deep, well-drained soils in localities sheltered from the wind. The hop-bearing vine shoots are carried upon wire and coir trellises, from which they are later harvested. The green hops are kiln-dried and bleached with sulphur dioxide fumes, following which the cured hops are pressed into bales.

Hop growing in Australia is confined to the Derwent, Huon and Channel areas of Tasmania and the Ovens and King Valleys in Victoria. A small area is also under hops in Western Australia, near Manjimup, but details are not available for publication.

### Production and imports of hops

The production of hops in Australia is adequate to meet local requirements, and in recent years small quantities have been exported. In the following table details of the production and imports of hops and the quantity of hops used in breweries are shown for each of the years 1967-68 to 1971-72. Exports of hops are negligible and are not recorded separately.

**HOPS: PRODUCTION AND DISPOSAL, AUSTRALIA**  
1967-68 TO 1971-72

Year	Production(a)		Imports	Net available supplies(b)	Quantity used in breweries
	Quantity	Gross value			
	cwt	\$'000	cwt	cwt	cwt
1967-68	36,752	3,211	1,370	38,122	30,501
1968-69	42,757	3,788	1,501	44,258	34,077
1969-70	40,319	3,588	357	40,676	34,545
1970-71	33,591	3,133	361	33,952	34,652
1971-72	36,368	3,658	402	36,770	30,241

(a) Excludes production in Western Australia, for which details are not available for publication.  
(b) Disregards movements in stocks.

## Rapeseed

Rapeseed is obtained from several varieties of brassica, which are cultivated in temperate and warm temperate zones for their oil producing seed.

The introduction of wheat quotas in Australia and the buoyant world market for oilseeds has brought about an expansion of areas sown to rape in the past three years in New South Wales, Western Australia, Victoria and South Australia.

Domestic production has increased from 88,000 cwt in 1969-70 to 1,075,018 cwt in 1971-72 with the major part of the production for that year being derived from Western Australia.

Rapeseed oil is used mainly as a salad and cooking oil with some minor amounts being utilised for industrial purposes. A protein meal is derived as a by-product in the crushing process.

## Safflower

Safflower is best cultivated either in the warm temperate zones or as a winter crop in the tropical or sub-tropical regions, on moderately fertile, weed-free, clay or sandy loams. Adequate moisture is required up to the flowering stage, after which it is relatively drought resistant. The soil preparation and sowing techniques are similar to those employed for small grains; it is usually harvested by combine when the seed is hard and dry. The oil, produced by crushing, is used in the manufacture of margarine, soaps, paints, varnishes, enamels, and textiles.

## SAFFLOWER: AREA AND PRODUCTION, STATES AND TERRITORIES, 1967-68 TO 1971-72

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

1970-71	406,184	76,872	20,462	4,042	7,828	..	..	..	515,388
1971-72	583,800	39,802	190,818	4,458	29,805	..	..	..	848,683

(a) Not available for publication.

(b) Incomplete; see individual States.

(c) 40 lb per bushel.

Imports of crude safflower seed oil in 1970-71 and 1971-72 totalled 1,636,000 gallons and 686,000 gallons respectively. These imports came mainly from the United States of America.

### Sunflower seed

Sunflowers are summer growing annuals produced mainly under raingrown conditions in the three eastern mainland States of Australia. The cultivation of sunflowers has developed rapidly in recent years to make it one of the major oilseed crops.

The seed for which the plant is cultivated yields a high quality dual purpose oil and a by-product protein meal used for stockfeed. Main uses for the oil are in the manufacture of margarine, as a salad and cooking oil, and for industrial purposes.

The introduction of wheat quotas and the development of high oil yielding varieties of sunflower seed have resulted in an increase in Australian production from 35,000 cwt in 1967-68 to 2,904,000 cwt in 1971-72.

### Vegetables for human consumption

#### Area, production and trade

Vegetables were initially grown on a large scale near the main cities, where there was ready access to reliable water supplies and to markets. Later, the expansion of irrigation areas and improvement in transport services resulted in their production being extended into many other areas. At present, because of the wide diversity of climatic conditions across Australia, supplies for main city markets are drawn from widely different areas, depending upon the times of maturity of the various crops. Apart from potatoes and onions, which are sold in some States through marketing boards, the bulk of vegetable trading takes place at the metropolitan markets of the cities concerned.

Details of the areas planted and production of individual kinds of vegetables are shown below for the seasons 1969-70 to 1971-72. Certain particulars shown are incomplete in that details for specific vegetables in some States are either not available or are not available for publication. For further information see the bulletin *Rural Industries*. Details of the estimated consumption of vegetables for a series of years ending 1971-72 are given in the chapter Miscellaneous.

## VEGETABLES FOR HUMAN CONSUMPTION: AUSTRALIA, 1969-70 TO 1971-72

<b>Total . . . . .</b>	<b>294,585</b>	<b>..</b>	<b>264,915</b>	<b>..</b>	<b>289,153</b>	<b>..</b>

**Processed vegetables**

Total production of canned vegetables in 1971-72 amounted to 252,627,000 lb. The principal types produced were baked beans (including pork and beans), 47,117,000 lb; beetroot, 65,357,000 lb; green peas (excluding mint processed peas), 25,177,000 lb; tomatoes, 19,045,000 lb; asparagus, 11,335,000 lb and sweet corn, 18,938,000 lb.

The production of dehydrated vegetables, including split peas, during 1969-70 amounted to 17,907,000 lb. Figures for 1970-71 and 1971-72 are not yet available. Production of potato crisps, chips and flakes during 1971-72 was 29,981,000 lb.

There has been rapid development in the quick-frozen vegetable industry. Data were collected for the first time in 1957-58, when 13,846,000 lb of frozen vegetables were produced, made up principally of 10,131,000 lb of peas and 2,540,000 lb of beans. In 1971-72 the production was 198,297,000 lb, of which 87,917,000 lb were peas and 41,554,000 lb were beans.

**Exports and imports of vegetables**

Overseas exports of fresh and frozen vegetables during 1971-72 amounted to 65,052,000 lb valued at \$3,831,000; dried vegetables, 18,163,000 lb valued at \$2,123,000; preserved vegetables, 1,046,000 lb valued at \$1,303,000; and other prepared or preserved vegetables, 3,538,000 lb valued at \$611,000.

Imports of fresh and frozen vegetables during 1971-72 amounted to 13,593,000 lb valued at \$2,152,000.

**Potatoes**

This crop requires deep friable soils, which in Australia are usually basaltic, alluvial or swampy in origin. Fertiliser requirements, which are generally high, vary with the type of soil. Potatoes are killed by heavy frost, but require only moderate temperatures for growth. Mechanical planters and diggers are used to a variable extent depending upon a variety of factors including terrain, state of the soil and scale of operations. Seed certification schemes, which operate in all States except Queensland, provide a supply of seed which is free from viral, fungal and bacterial diseases. In Australia potatoes are used almost entirely for human consumption and not for the production of starch or alcohol. They are rarely used as stock feed.

*Area, production, and yield per acre.* Victoria possesses particular advantages for the growing of potatoes, as the rainfall is generally satisfactory and the climate is unfavourable to the spread of Irish blight; consequently, the crop is widely grown. The principal areas of that State are the central highlands and the south-western and Gippsland districts. New South Wales and Queensland come next in order of acreage sown. In New South Wales production is chiefly in the tablelands district.

The production of potatoes from 1935-36 is shown in plate 44, below.

**PLATE 44**

Potato marketing boards were established in all States except Tasmania under separate State legislation after Commonwealth control of potato marketing under war-time legislation ceased at the end of 1948. The life of the Queensland Board was not extended when its term ended in 1954. The New South Wales Board was voted out by growers in 1956, and the Victorian Board also ceased functioning in that year. The Boards in South Australia and Western Australia are the only statutory boards still in operation.

*Value of potato crop.* The estimated gross value of the potato crop of each State for the 1971-72 season and the value per acre are shown in the following table.

POTATOES: VALUE OF CROP, STATES, 1971-72

		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)
Aggregate value	\$'000	8,991	15,002	8,420	4,393	5,923	2,626	45,375
Value per acre	\$	364.33	434.08	462.66	640.56	892.95	295.75	454.50

(a) Excludes Australian Capital Territory.

*Consumption and exports of potatoes.* The annual consumption of potatoes in Australia during each of the three years 1969-70 to 1971-72 amounted to 679,300 tons, 675,900 tons and 746,900 tons respectively or 122.9 lb, 119.8 lb and 129.7 lb respectively per head of population. These figures exclude the quantities used for seed, which averaged about 50,000 tons annually over this period. Details showing exports and imports for the years 1967-68 to 1971-72 are given in the following table.

POTATOES: EXPORTS AND IMPORTS, AUSTRALIA, 1967-68 TO 1971-72

Year	Exports		Imports	
	Quantity	Value	Quantity	Value
		\$'000		\$'000
	tons	f.o.b.	tons	f.o.b.
1967-68	8,150	693	..	..
1968-69	12,591	966	237	12
1969-70	20,583	1,474	..	..
1970-71	11,475	978	..	..
1971-72	11,763	1,039	..	..

Australia's principal markets are Papua New Guinea, Singapore, New Caledonia and Fiji.

## Fruit

The varieties of fruit grown differ in various parts of the States, ranging from pineapples, papaws and mangoes in the tropics to strawberries, raspberries and currants in the colder parts of the temperate zone. In New South Wales citrus fruit (oranges, lemons, etc.) and bananas are the principal crops, although apples, peaches, plums, pears and cherries are grown extensively. The principal varieties grown in Victoria are apples, pears, peaches, oranges, and apricots. In Queensland apples, pineapples, bananas, oranges, mandarins, peaches and plums are the major fruits cultivated. In South Australia, in addition to oranges, apples, peaches, apricots, and pears, almonds and olives are grown extensively. In Western Australia apples, oranges, plums, and pears are the chief varieties. In Tasmania apples are by far the most important type of fruit grown, but small fruit, such as currants raspberries and gooseberries, are also grown extensively, the balance of the area being occupied mainly with pears and apricots.

### Apples and pears

The *Apple and Pear Organization Act* 1938-1966 provides for the establishment of an Australian Apple and Pear Board comprising representatives of growers, exporters, employees, and the Commonwealth Government. A representative in London has also been appointed by the Board. An export levy to meet the expenses of the Board is provided for in the *Apple and Pear Export Charges Act* 1938-1968. The function of the Board is the organisation and control of exports of fresh apples and pears, and it has the power to regulate shipments, determine export quotas, allocate consignments from each State, and recommend the licensing of exporters. The Board contributes to apple and pear publicity activities overseas.

Early in October 1971 the Government approved a stabilisation plan for the export of apples and pears "at risk", with an estimated Commonwealth liability of \$10 million over 5 years, commencing with the 1971 season. The plan establishes average seasonal returns (including the returns from forward sales) for each variety, which are then compared with the agreed support price for each variety and the extent of the deficiency or surplus is determined.

### Canned Fruit

The overseas marketing of canned fruit is regulated by the *Canned Fruits Export Marketing Act* 1963-1970. Under this Act the Australian Canned Fruits Board sets terms and conditions for overseas sales. All exporters must hold an export licence issued by the Minister for Primary Industry on

the recommendation of the Board. The Board comprises representatives of the Commonwealth Government (one), co-operative canners of deciduous fruit (three), proprietary canners of deciduous fruit (three), pineapple canners (one) and growers of deciduous canning fruit (three). The Board maintains a London office. The *Canned Fruits Export Charges Act 1926-1966* provides for a levy on exports to meet the Board's expenses, which include contributions to overseas publicity connected with the canned fruit industry. In 1963 an excise duty was imposed by the *Canned Fruits Excise Act 1963* on canned deciduous fruit entered for domestic consumption, and the proceeds of the duty are made available to the Board.

In 1959 the Australian Canned Fruit Sales Promotion Committee was established to promote the sale of canned deciduous fruit on the home market and overseas. The operations of the Committee are financed by a levy on fruit accepted by the canneries for the production of canned fruit. The Committee comprises representatives of growers and processors of canning fruit and a representative of the Commonwealth Government.

In February 1971 the Canned Deciduous Fruit Industry Advisory Committee was established under the auspices of the Australian Agricultural Council to advise industry and Governments on the longer-term problems facing the industry. The Committee is representative of the Commonwealth, the States and canners and growers.

### Overseas marketing of fruits

Details of the overseas marketing of fruits were published in Year Book No. 55 and earlier issues.

### Area and production of fruit

The total area under fruit in Australia in 1971-72 was 304,164 acres, 2.9 per cent less than the record acreage established in 1965-66.

## Production and consumption of jams and jellies and preserved fruit

In Australia considerable quantities of fruit are used in the production of jams and jellies and for preserving. Fruit usage in factories in 1968-69 and 1969-70 amounted to 459,000 tons and 486,000 tons respectively. Statistics for 1970-71 are not available. During 1971-72 output of jams, conserves, fruit spreads, etc., amounted to 77,966,000 lb, while output of preserved fruit amounted to 558,944,000 lb. Of the latter figure, peaches accounted for 199,743,000 lb, pears 102,605,000 lb, and pineapples 72,645,000 lb.

Details of the estimated consumption of fruit and fruit products for a series of years ending 1971-72 are shown in Chapter 29, Miscellaneous.

## Imports and exports of fruit and fruit products

The imports of fresh fruit into Australia are negligible, while those of dried fruit consists mainly of dates, approximately 90 per cent of which are obtained from Iraq and Iran; the bulk of the remainder coming from Turkey and the People's Republic of China. A considerable export trade in fresh and chilled, and dried fruit is carried on by Australia with overseas countries. The values of the shipments in 1971-72 amounted to \$28,680,000 for fresh and chilled fruit, and \$19,770,000 for dried fruit respectively. Apples constitute over half of the fresh fruit exported, although exports of pears and citrus fruits are considerable.

## FRESH AND CHILLED FRUIT: EXPORTS, AUSTRALIA, 1967-68 TO 1971-72

<i>Year</i>	<i>Apples</i>		<i>Pears</i>		<i>Citrus</i>		<i>Total value(a)</i>
	<i>Quantity</i>	<i>Value</i>	<i>Quantity</i>	<i>Value</i>	<i>Quantity</i>	<i>Value</i>

(a) Includes exports of all other canned or bottled fruit.

Exports of pulped fruit during 1971-72 amounted to 896,000 lb valued at \$146,000.

The total value of preserved fruit and fruit preparations (including fruit juices) imported into Australia during 1971-72 was \$4,430,000. The value of exports of fruit juices in 1971-72 was \$1,292,000.

## Vineyards

Grapes require a warm to hot climate and a predominantly winter rainfall. Freedom from late spring frosts is essential. They are grown for wine-making, drying and, to a minor extent, for table use. In Australia wine is produced very largely from irrigated crops, as are dried fruits. Some of the better known wine producing areas are the Murray Valley (South Australia and Victoria), Barossa Valley and Southern Vales Areas (South Australia), the Murrumbidgee Irrigation Areas and the Hunter Valley (New South Wales), the Mildura, Rutherglen and Stawell districts of Victoria, and the Swan Valley (Western Australia). Nearly all the dried fruit is produced along the River Murray and its tributaries, with small localised areas in other States.

### Area of vineyards

The area under vineyards in the 1971-72 season in Victoria and South Australia constituted 74 per cent of the total area of vineyards.

**VINEYARDS: AREA(a), STATES, 1967-68 TO 1971-72**

(a) Bearing and not bearing.

### Wine industry

Australia produces wine of every type and also brandy. In recent years there has been a distinct trend towards greater consumption and production of unfortified or table wines. Until 1957-58 production of these wines (which include burgundy, claret, riesling, sauterne, and sparkling wines) was less than half that of the fortified varieties (sherries, ports, etc.). By 1968-69 production of table wines had exceeded the volume of fortified varieties and in 1971-72, production of unfortified wines exceeded fortified wines by 9.1 million gallons.

The *Wine Overseas Marketing Act* 1929-1966 was introduced to place the overseas marketing of wine on an orderly basis. The Australian Wine Board, consisting of representatives from wineries and distilleries, grape growers and the Commonwealth Government, supervises the sale and distribution of Australian wine exported and recommends conditions under which export licences should be issued. The Board also engages in wine publicity and trade promotion activities both in Australia and overseas. In London the Board maintains an Australian Wine Centre, which is a medium for promoting interest in Australian wines and brandy. It is also a retail shop for the sale of these products. The *Wine Grapes Charges Act* 1929-1969 provides for the imposition of a levy on all grapes used in Australia for the manufacture of wine, brandy and spirit used for fortifying wine. The proceeds of the levy are used to meet the Board's projects in Australia and overseas and to defray the administrative expenses of the Board, which has no other source of income.

### Production and consumption of wine and brandy

In 1971-72 the total production of wine (beverage and distillation) in Australia was 62.9 million gallons, while total consumption of beverage wine was 25.6 million gallons (2.0 gallons per head of population). Similar particulars for 1970-71 are 55.3 million gallons and 24.4 million gallons (1.9 gallons per head of population) respectively.

(a) Includes New South Wales and Victoria, for which separate details are not available for publication.

### Exports and imports of wine and brandy

Principal markets for exports of Australian wine are the United Kingdom, Canada and Papua New Guinea. During 1971-72 these countries received 633,000 gallons, 492,000 gallons and 183,000 gallons respectively. Exports of Australian-produced wine and imports of wine for the five years ended 1971-72 are shown in the following table.

## WINE: EXPORTS AND IMPORTS, AUSTRALIA, 1967-68 TO 1971-72

Year	Quantity			Value f.o.b.		
	Sparkling ('000 gals)	Other ('000 gals)	Total ('000 gals)	Sparkling (\$'000)	Other (\$'000)	Total (\$'000)
EXPORTS						
1967-68	88	1,751	1,839	359	2,794	3,153
1968-69	73	1,729	1,802	314	3,081	3,395
1969-70	83	1,212	1,295	348	2,565	2,913
1970-71	87	1,357	1,444	391	3,190	3,581
1971-72	85	1,669	1,754	401	3,844	4,245
IMPORTS						
1967-68	76	226	302	464	899	1,363
1968-69	88	367	455	495	1,387	1,882
1969-70	104	324	428	597	1,325	1,922
1970-71	118	408	526	780	1,801	2,581
1971-72	122	424	546	781	2,114	2,895

During 1971-72 Italy supplied 165,000 gallons valued at \$692,000, Portugal 109,000 gallons valued at \$386,000 and France 73,000 gallons valued at \$916,000.

Exports of Australian-produced brandy in 1971-72 amounted to 76,000 proof gallons, valued at \$416,000. Imports of brandy, mainly from France, amounted to 268,000 proof gallons, valued at \$1,482,000.

**Dried vine fruit industries**

The dry period from November to March in the lower Murray valley makes this an ideal area for dried vine fruit. Harvesting for drying takes place at the end of summer. The sun-drying process is often accelerated by using a dip of cold potash.

The *Dried Fruits Export Control Act 1924-1966*. For details of the *Dried Fruits Export Control Act 1924-1966* see Year Book No. 55, page 877, and earlier issues.

For details of the bulk purchase agreements between the Governments of the United Kingdom and Australia which operated during the period 1946-53 see Year Book No. 40, page 888. From 1 December 1953 exports to the United Kingdom have been on a trader to trader basis.

In June 1963, Australian, Greek and Turkish dried vine fruit interests concluded an agreement to maintain minimum prices for sultanas on world markets. The agreement has been periodically reviewed. At the Ninth Conference in London in June 1971, representatives of the signatory countries (which had included South Africa from 1970) met for the last time as parties to the agreement and formally resolved it out of existence. Despite this it was agreed that contacts between the producing countries would continue and efforts are currently being made to revive formal arrangements for co-operation.

The *Dried Vine Fruits Stabilization Act 1971* (For details of the first Dried Vine Fruits Stabilization Scheme, which expired with the disposal of the 1968 crop, see Year Book No. 55, page 877, and earlier issues). A referendum of eligible dried vine fruit producers was held in September 1971 concerning a new five-year stabilisation plan for the dried vine fruits industry. The result of this referendum was that growers were in favour of the introduction of a new plan. Accordingly, legislation was brought down and received the Royal Assent on 16 December 1971. The plan operates as from the 1971 season for a period of five years.

## DRIED VINE FRUIT: PRODUCTION, STATES, 1967-68 TO 1971-72

1971-72 . . .	50,862	16,120	4,517	1,378	55,379	17,498

(a) Excludes quantities exported as mincemeat.

The chief countries importing Australian dried vine fruit are the United Kingdom, Canada, New Zealand and the Federal Republic of Germany. The quantities exported to these countries in 1971-72 were 19,640 tons, 16,968 tons, 6,547 tons and 3,563 tons respectively.

## Table grapes

Grapes for table use are grown in all States except Tasmania, but the area of this type was only about 7 per cent of the productive area of vines in 1971-72.

## PASTORAL PRODUCTION

## Livestock numbers

A detailed account of the various enumerations of livestock in Australia made prior to 1860 was given on page 748 of Year Book No. 35. Since 1861 annual enumerations have been made, based, with few exceptions, on actual collections made through the agency of the State police or by post. Particulars concerning the numbers of each of the principal kinds of livestock in Australia, at decennial intervals from 1861 to 1961, and from 1968 onwards in single years, are given in the following table, and are shown continuously since 1880 on the graph on plate 45, page 805.

## LIVESTOCK: AUSTRALIA, 1861 TO 1972

('000)

Year	Horses	Cattle	Sheep	Pigs	Year	Horses	Cattle	Sheep	Pigs
1861 .	432	3,958	20,135	351	1941 .	1,666	13,256	122,694	1,797
1871 .	717	4,276	41,594	543	1951 .	999	15,229	115,596	1,134

While livestock numbers (particularly sheep) have increased substantially since 1861, marked fluctuations have taken place during the period, mainly on account of widespread droughts which have from time to time left their impressions on the pastoral history of Australia. These occurred in 1868, 1877, 1883-84, 1892, 1893, 1895, 1901-2, 1912, 1914, 1918, 1919, 1922-23, 1925-26, 1927-28, 1929-30, 1940-41, 1944-45 to 1946-47, and 1965-67. The years in which the numbers of livestock attained their peaks are as follows: horses, 1919 (2,527,000); cattle, 1972 (27,373,000); sheep, 1970 (180,080,000); and pigs, 1972 (3,199,000).

The distribution throughout Australia of sheep, beef cattle, dairy cattle and pigs at 31 March 1963 is shown in the maps on pages 1049 and 1050 and facing pages 1082 and 1083 of Year Book No. 50.

The numbers of horses, cattle, sheep, and pigs in each State and Territory are shown later in this chapter.

### Value of pastoral production and indexes of quantum and price

Values of pastoral production are shown for 1971-72 in the table following. Further details of values of pastoral production and indexes of quantum and price, together with details of the source of the information and an explanation of the terms used in this compilation will be found in Chapter 29, Miscellaneous.

### GROSS, LOCAL AND NET VALUES OF PASTORAL PRODUCTION: STATES AND TERRITORIES, 1971-72

(a) No deduction has been made for depreciation and maintenance. (b) No allowance has been made for costs of power, power kerosene, petrol and other oils.

## Sheep

### Distribution throughout Australia

With the exception of a short period in the early eighteen-sixties, when the flocks in Victoria outnumbered those of New South Wales, the latter State has occupied the premier position in sheep-raising. Western Australia is the second largest sheep raising State followed by Victoria. Sheep numbers reached a peak in Australia in 1970. They then declined up to March 1972 as producers turned off large numbers for slaughter and moved from wool-growing towards beef production.

A map showing the distribution of sheep in Australia at 31 March 1963 appears on page 1049 of Year Book No. 50. Graphs showing the number of sheep in Australia from 1880 onwards appear on plates 45 and 46 of this Year Book (pages 805 and 813).

### SHEEP: NUMBERS IN STATES AND TERRITORIES, 1968 TO 1972

('000)

<i>Year ended 31 March</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>A.C.T.</i>	<i>Aust.</i>
1968 . . . . .	67,786	27,909	19,948	16,405	30,161	4,428	9	267	166,912
1969 . . . . .	68,153	30,185	20,324	18,392	32,901	4,395	10	246	174,605
1970 . . . . .	72,284	33,157	16,446	19,747	33,634	4,560	8	244	180,080
1971 . . . . .	70,605	33,761	14,774	19,166	34,709	4,517	9	251	177,792

<b>Total . . . . .</b>	<b>70,605</b>	<b>33,761</b>	<b>14,774</b>	<b>19,166</b>	<b>34,709</b>	<b>4,517</b>	<b>9</b>	<b>251</b>	<b>177,792</b>

(a) Merino comeback is the progeny of a crossbred Merino ewe and a Merino ram, i.e. finer than half-bred. (b) Half bred and coarser.

## Exports and imports of sheep

The movement of sheep to and from Australia is governed under Customs regulations. Exports of both breeding and slaughter sheep are subject to the provision of a permit from the Department of Primary Industry. For most breeds, these permits are freely granted. However, the export of breeding merinos was prohibited in the mid-thirties and this ban has continued on the export of merino ewes, semen and fertilised ova. There has been a partial relaxation on the export of merino rams in recent years, whereby up to 300 merino rams could be purchased for export each year at nominated public auctions. In February, 1973 the Government reimposed the total ban on the export of merinos to any country except New Zealand until a majority of persons affected decide by referendum in favour of removing or relaxing the embargo on the export of merino rams and their semen.

Since June, 1958, there has been a prohibition on the import of sheep to protect the Australian sheep industry from the introduction of exotic diseases, such as 'blue-tongue'.

## Cattle

## Objects of cattle-raising in Australia

Cattle-raising is carried out in all States, the main object in certain districts being the production of stock suitable for slaughtering purposes and in others the raising of profitable dairy herds. While dairy cattle are restricted mainly to coastal districts, beef cattle are more widely distributed in areas such as the tropical area of northern Queensland, the Northern Territory and the Kimberley district in the north of Western Australia. Increasing numbers of beef cattle are being raised in conjunction with sheep.

## Distribution throughout Australia

Although cattle numbers declined after 1957 because of drought conditions and heavy slaughtering, they began to rise again in 1960 and in 1964 reached 19,055,000. Again because of drought in the eastern States, this figure declined to 17,936,000 in 1966. There has been an accelerating increase in the total number of cattle in Australia over the last six years due largely to an increase in the demand for beef. Total cattle numbers in March 1972 were 27.4 million compared with 24.4 million in 1971. Total dairy cattle numbers are currently 3.9 million.

For a graph showing the number of cattle in Australia from 1880 onwards see plate 45 page 805.

### Exports and imports of cattle

In 1971-72 the number of cattle exported was 3,081, valued at \$855,000 (1970-71, 1,672 valued at \$288,000). Prior to June 1958 small numbers of cattle were imported, consisting mainly of valuable animals for stud purposes. Since that date an embargo has been imposed on the import of cattle in order to prevent the introduction of the disease 'blue-tongue'.

### Comparison with other countries

The following table shows the number of cattle in Australia and in some of the principal cattle-raising countries of the world at the latest available date.

#### CATTLE: NUMBERS IN VARIOUS COUNTRIES

*Source (for countries other than Australia): World Agricultural Production and Trade, United States Department of Agriculture*

(a) Includes buffaloes.

## Horses

The number of horses on rural holdings in Australia reached a peak of 2,527,000 in 1919. Since then it has declined, because of mechanisation of transport and farming, and the number recorded at 31 March 1970 was 456,000. From 1970 particulars of horses, on a Commonwealth basis, are collected only at decennial intervals in accordance with the world census by FAO.

A graph showing the number of horses in Australia since 1880 appears on plate 45, page 805.

### HORSES: NUMBERS IN STATES AND TERRITORIES, 1930 TO 1970

('000)

31 March—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
1930 . . .	535	393	500	189	160	34	34	1	1,846
1940 . . .	535	326	445	190	139	30	33	1	1,699

1970 . . .	136	53	173	16	29	6	41	1	456

### Overseas trade in horses

Exports of Australian-bred horses in 1971-72 numbered 1,372, valued at \$2,908,000, made up of horses for breeding (212 valued at \$404,000), horses for racing (852 valued at \$2,330,000, shipped principally to Singapore, Indonesia, Hong Kong, the United States of America and New Zealand), and horses for other purposes (308 valued at \$174,000). Horses imported into Australia in 1971-72 (1,163 valued at \$4,347,000) were mainly from New Zealand and the United Kingdom.

## Pastoral products: wool

With about one-sixth of the world's woolled sheep, Australia produces almost one-third of the world's wool and more than half the world's fine-quality Merino wool. More than 90 per cent of the production is exported, mainly as greasy wool, although substantial amounts of scoured and carbonised wool, wool on sheep skins and small quantities of semi-manufactured wool are also shipped. The important position held by Australia among the principal sheep and wool producing countries of the world is shown in the table on page 818.

### Wool marketing

Details of past wool marketing schemes and agreements, including the 1914-18 War Imperial Purchase Scheme, the British Australian Wool Realization Association Ltd, the 1939-45 War Acquisition Scheme, Joint Organization, and the Reserve Price Plans of 1951 and 1965, are given in previous issues of the Year Book.

Between 80 and 90 per cent of the Australian wool clip is disposed of at auction. (During both world wars, however, auction selling was suspended and replaced by bulk purchase schemes). There are fourteen recognised wool-selling centres, namely Sydney, Goulburn, Newcastle, Albury, Melbourne, Geelong, Ballarat, Portland, Brisbane, Adelaide, Fremantle, Albany, Hobart, and Launceston. At these centres wool-selling brokers operate large stores where wool received from growers is held awaiting sale.

Each year a wool-selling program is drawn up by the Joint Wool Selling Organisation representing wool growers, selling brokers and wool-buyers on the basis of the expected clip. Selling dates and the quantities to be offered are then determined for each centre. Before each sale the selling brokers, who act as agents for the wool-growers, display a representative portion of the wool to be sold on show floors for buyers' inspection and valuation. Auction sales are attended by buyers purchasing on behalf of wool users in more than fifty countries.

The balance of the clip is sold mainly through private sale, that is, after direct negotiation between the grower and the buyer. Since September 1971 a further alternative, sale by tender, has been available using the principle of sealed bidding. Companies engaged in this activity employ objective measurement techniques for wool, which can allow substantial savings in handling costs over traditional methods of wool selling by auction.

### Wool marketing Committee of Enquiry

Details of this enquiry and its findings are included in previous issues of the Year Book.

### The Australian Wool Industry Conference

This body was formed by woolgrowers in October 1962 to meet the need for an organisation with sufficient authority to speak on behalf of the woolgrowing industry as a whole. It is not a statutory body and consists of twenty-five members each from the Australian Woolgrowers' and Graziers' Council and the Australian Wool and Meat Producers' Federation. The fifty member conference is presided over by an independent chairman.

The Conference makes recommendations to the Commonwealth Government on policy matters concerning the wool industry. Under the Wool Industry Act it is the responsibility of the Conference to nominate woolgrower representatives for appointment to the Australian Wool Board. Under the Wool Tax Acts (*see* page 581) the Conference is also responsible for recommending to the Commonwealth Government what rates of levy should be paid by woolgrowers to finance the activities of the Wool Corporation and the wool research program.

In March 1972 the Conference put to the Government a proposal for:

- (i) a revised structure for the management of the industry's affairs through the amalgamation of the Australian Wool Board and the Australian Wool Commission into a single wool authority, and
- (ii) an integrated marketing system, involving a plan for acquisition of the Australian clip and influencing all of the activities bringing wool from the raw material stage to the ultimate consumer.

#### **Committee on Wool (Randall Committee)**

In October 1971 the Government appointed a committee chaired by Sir Richard Randall, former permanent head of the Treasury, to report on the situation and outlook of the Australian Wool Industry. The report of the Committee on these matters was presented to the Prime Minister on 16 May 1972.

Following the submission by the Australian Wool Industry Conference in March 1972, *see* above, the Committee was asked to examine this proposal. The Committee presented the final report on this examination on 29 May 1972.

A report on all the investigations and findings of the Committee was released publicly in August 1972. On the A.W.I.C. proposal the Committee viewed the first part favourably but considered that some aspects of the acquisition proposal needed further clarification.

#### **Australian Wool Corporation**

Following the Australian Wool Industry Conference submission and the report of the Randall Committee (*see* above) the Australian Wool Corporation was established under the *Wool Industry Act* 1972 and came into operation on 1 January 1973. The Corporation took over the functions of both the Australian Wool Board and the Australian Wool Commission which ceased to operate on that date.

The Corporation consists of nine members, including a full time Chairman. The Chairman is appointed for a period of five years with the other part-time members being appointed for a period of three years. Of the eight other members, four represent Australian woolgrowers, one represents the Commonwealth Government and three are members with special qualifications who have experience in the marketing, processing or manufacture of wool or wool products, or in commerce, finance, economics or science. All members, including the Chairman are appointed by the Minister for Primary Industry, the woolgrower representatives on the nomination of the A.W.I.C. and the three members with special qualifications after consultation with the A.W.I.C.

The functions of the Australian Wool Corporation, which were inherited almost directly from the Wool Commission and Wool Board relate to Wool Marketing, Wool Use Promotion, Wool Testing, Wool Research and the Management of Wool Stores. At its first meeting on 5 January 1973, the Corporation established a group to investigate wool marketing including the proposals for acquisition.

Funds for the Corporation's activities other than its reserve price functions are provided by both woolgrowers, through a levy on shorn wool proceeds (*see* below), and the Commonwealth. Reserve price activities are supported by an administrative levy on wool sold at auction, with funds for wool trading activities coming from accumulated funds inherited from the Australian Wool Commission, and from credit facilities established with the trading banks.

#### **Australian Wool Board**

The Australian Wool Board which was constituted under the *Wool Industry Act* 1962-1970 ceased to function on 1 January 1973 when the Australian Wool Corporation (*see* above) commenced operations.

For details of the Australian Wool Board *see* Year Book No. 58, page 800.

#### **Wool levy**

Since 1936 a statutory levy has been collected from woolgrowers to finance wool promotion activities. The initial rate of 5c a bale was increased at the request of woolgrowers to 20c a bale in 1945 and 40c a bale in 1952, the latter rate continuing until 1960. Further details regarding the operation of this levy prior to 1957 appear in Year Book No. 48, page 978.

Under legislation passed in 1957 provision was also made for the payment by woolgrowers of a contribution for wool research which was fixed at 20c a bale. In 1960 the wool promotion levy was raised to 50c a bale, and the following year it was increased further to \$1 a bale. The operation of this rate was subsequently extended for 1962-63 and 1963-64.

On 1 July 1964 the basis for collecting the woolgrowers' combined levy for wool promotion and research was changed from a flat rate per bale to a percentage deduction from the gross value of shorn wool sold. A maximum rate of 2 per cent was fixed, but provision was made for a lower rate to be prescribed, if appropriate. For 1964-65 the rate was set at 1.875 per cent, which involved a substantial increase in payments by woolgrowers for promotion (from \$1 per bale to the equivalent of about \$2.70 per bale), while the research component of the levy was left unaltered at 20c per bale. In 1965-66 the levy was set at 2 per cent and it remained at the maximum rate till 1969-70. From 1 August 1970, the rate of levy was reduced to 1 per cent.

Following agreement between the Australian Wool Industry Conference and the Government on overall funding of wool research and promotion activities, the rate of the levy for the triennium beginning 1 July 1973 has been set at 2.4 per cent of gross proceeds of shorn wool. This rate includes, however, a loading for administrative expenses of the Wool Corporation in its reserve price activities.

The imposition and collection of the combined levy from woolgrowers is governed by six complementary Acts, the Wool Tax Acts (Nos 1 to 5) 1964 and the *Wool Tax Administration Act* 1964-1966.

#### **Commonwealth Government's contributions to wool research and promotion**

In 1945 the Commonwealth Government commenced contributing on a statutory basis to wool research. Initially the contribution was at the rate of 20c a bale, but this was doubled in 1957 to 40c a bale. At this rate the Commonwealth Government contributed about \$2 million to wool research in 1965-66, and a similar sum was provided in 1966-67.

Prior to 1964-65 the Commonwealth Government had not contributed to wool promotion. However, following representations made by the Australian Wool Industry Conference, the Commonwealth Government undertook to provide assistance to the Australian Wool Board in financing its commitment to the greatly expanded wool promotion program of the International Wool Secretariat. The expanded wool promotion program, announced by the Secretariat, envisaged an increase in the Wool Board's annual contribution to overseas wool promotion campaigns from the then level of \$5 million to about \$20 million.

From 1 July 1964 the Commonwealth Government undertook to match on a \$1 for \$1 basis any increase in contributions by woolgrowers for wool promotion in excess of the levy of \$1 a bale then in force, and the Wool Industry Conference agreed to increase the growers' levy to the equivalent of about \$2.70 a bale, which resulted in a Commonwealth commitment of about \$1.70 a bale. In aggregate this commitment entailed a Commonwealth contribution for promotion of about \$8 million a year. This arrangement operated until 30 June 1967.

During 1967 the Wool Industry Act was amended following negotiations between the Executive of the Australian Wool Industry Conference and the Government. The amendment provided for a Government contribution for wool research and promotion during the three years 1967-68 to 1969-70 on a \$1 for \$1 basis matching woolgrowers' contribution by levy, to a maximum of \$14 million in any one year. It provided for the grower levy and the Government grant to be apportioned annually between wool research and promotion by the Minister for Primary Industry after considering the recommendations of the Australian Wool Industry Conference. No change occurred in the legislation providing for the payment by woolgrowers of a levy at a rate not exceeding two per cent per annum.

When arrangements for Government financial support for wool research and promotion expired on 30 June 1970, the Government increased its contributions for these activities to an average of \$27 million a year for each of the three years 1970-71 to 1972-73. At the same time, as mentioned above, the levy on woolgrowers was reduced from 2 per cent to 1 per cent of the gross proceeds from the sale of shorn wool.

#### **Australian Wool Marketing Corporation Pty Ltd.**

The functions of this body, which began actual operations on 1 July 1970 were taken over by the Australian Wool Commission (see below) in November 1970. For details of the Marketing Corporation see previous issues of the Year Book.

#### **The Australian Wool Commission**

The Australian Wool Commission was established in November 1970 under the *Australian Wool Commission Act* 1970 to operate a flexible reserve price scheme for wool sold at auction and to perform a number of other functions aimed at improving the marketing of Australian wool.

It ceased to operate from 1 January 1973 when its functions were taken over by the Australian Wool Corporation (see page 810). For details of the Australian Wool Commission see Year Book No. 58, pages 802-3.

The working capital needed by the Commission (to purchase wool under its flexible reserve price scheme, to make advances to woolgrowers, etc.) was provided in the form of loans by the Commonwealth Government and by trading banks. The Commonwealth guaranteed loans made by trading banks to the Commission. All monies advanced to the Commission for this purpose were repaid from trading activities prior to its ceasing activities. In 1971-72 the Commission recorded a net trading profit of over \$10 million.

Under the Act, the operating costs of the Commission were met jointly by woolgrowers and the Commonwealth Government. The Government provided half of the funds required for the rehandling and brokers' administration charges for the elimination of small lots under the Price Averaging Plan, and was to meet any losses that may result from time to time on the resale of wool purchased by the Commission. The balance of the operating costs of the Commission were met by woolgrowers. Administrative expenses incurred by the Commission in operating the reserve price scheme were met by a levy on wool sold at auction. For 1971-72 this levy was 0.45 per cent of gross proceeds. From 1 July 1972 the rate was set at 0.40 per cent.

#### **Emergency financial assistance for woolgrowers**

In the 1970-71 Budget an amount of up to \$30 million was provided for emergency assistance to woolgrowers to offset to some extent the decline in wool income resulting from the drastic slump in wool prices between 1968-69 and 1969-70. About \$21.5 million was paid out in grants to over 21,000 woolgrowers during 1970-71 and 1971-72.

#### **Wool Deficiency Payments Scheme**

This scheme was introduced to give woolgrowers a guaranteed price for the 1971-72 wool selling season for all but specified low price low grade wools comprising the bottom 10 per cent of the clip. A deficiency percentage rate is calculated each week which, when applied to the gross sale price of all wool sold, brings the price up to the equivalent of an average for the whole Australian clip over the full season of 79.37 cents per kilo greasy. Payments to producers of wool are made by the Australian Wool Commission on behalf of the Commonwealth through wool brokers and merchants and other persons registered under the *Wool (Deficiency Payments) Act 1971*. More than \$52 million was paid out under this scheme in 1971-72. The scheme was extended to cover the 1972-73 season on the same basis but without excluding any inferior wools. No payments are expected in respect of wool sold in 1972-73.

#### **Objective measurement of Wool**

In 1969 the Australian Wool Board, through its Objective Measurement Technical Committee and Objective Measurement Policy Committee, began investigations into the objective measurement of wool and the significance of this development for the marketing of the Australian wool clip.

In 1970 the Commonwealth Government provided \$1.5 million for work on research and implementation of objective measurement techniques.

The findings of the Committees were presented to the Board in December 1972, and point to significant changes from the traditional processes involved in every stage of the marketing process. Savings of several dollars per bale could be achieved in the marketing of wool, especially through the separation of handling and selling centres for wool. The Committee noted that further refinements and developments in techniques would occur. The Department of Primary Industry is setting up a monitoring body, as recommended by the committee to ensure the maintenance of standards and accuracy in measurement of wool.

#### **Wool production**

Wool as shorn from the sheep contains an appreciable amount of grease, dirt and other extraneous matter, and is termed 'greasy wool'. The quantity of grease and other matter in a fleece differs not only between countries, but between districts in the same country. It fluctuates with the vagaries of the season, and with the breed and the condition of the sheep. To allow for this factor, the weight of greasy wool is sometimes given on a 'clean' basis, i.e. minus the estimated amount of impurities. The net wool fibre content of greasy wool, expressed as a percentage, is termed 'clean yield'.

From 1946-47 to 1952-53 the Australian Wool Realisation Commission, and from 1953-54, the Wool Statistical Service, have assessed annually the clean yield of the Australian wool clip. During the period of assessment the clean yield showed a continuous rise up to 1951-52, when it reached 57.5 per cent. It has since fluctuated between 55.7 per cent and 57.7 per cent. It was 56.9 per cent in 1971-72.

Wool scoured, washed and carbonised in Australia before export, however, has a somewhat lower clean yield than the whole clip, because the grade of greasy wool treated locally for export as scoured, washed or carbonised contains quantities of dirty and low-grade wool. The quantity of scoured and carbonised wool exported during 1971-72 was about 7.9 per cent of total raw wool exports in terms of greasy. For the clean yield of Australian scoured wools exported a standard factor of 93 per cent has been adopted.

The production of wool in the States and Territories varies broadly in accordance with the number of sheep depastured and with seasonal conditions which affect clip per head (see page 814). In general, however, South Australia obtains from its large-framed merinos a much heavier fleece per sheep than the Australian average. In addition, as a result of better management (improved pastures, fodder conservation, better breeding, control of diseases, etc.), the long-term trend has been towards higher fleece weights.

The following table shows details of total wool (i.e. shorn, dead and fellmongered, and exported on skins) produced by each of the States and Territories during the years 1967-68 to 1971-72. A graph showing the production of wool in relation to sheep numbers from 1880 onwards appears on plate 46 below.

**PRODUCTION OF WOOL (GREASY BASIS): STATES AND TERRITORIES, 1967-68 TO 1971-72**  
(<sup>'000</sup> kg)

The bulk of the Australian wool production (about 90 per cent in recent years) is shorn from live sheep. The remainder is obtained by fellmongering (less than one per cent) or is exported on skins (about 9 per cent). The following table shows details of total wool production according to method of obtaining wool, and also the gross value of wool produced. Gross value is based, for shorn wool, upon the average price realised for greasy wool sold at auction and, for skin wools, on prices recorded by fellmongers and skin exporters.

**QUANTITY (GREASY BASIS) AND VALUE OF WOOL PRODUCED**

## Classification of wool according to quality

The following table provides a detailed analysis of wool sold at auction, according to quality, for the 1971-72 season. These data are compiled by the Wool Corporation on the basis of catalogues of auction sales. 'Quality' is a measure of the fineness and texture of wool for spinning purposes.

**CLASSIFICATION OF GREASY WOOL SOLD AT AUCTION(a): AUSTRALIA**  
**1971-72 SEASON**

(Bales of approximately 136 kg)

(a) All greasy wool sold at auction except 'wool re-offered account buyer.'

## Price and value

During 1971-72 the price of greasy and scoured wool sold in the selling centres of Australia averaged 75.25c per kg compared with the average price of 64.68c per kg in 1970-71 and 82.78c per kg in 1969-70. These prices are as compiled by the National Council of Wool Selling Brokers and represent the average price realised for all greasy and scoured wool, of whatever type or quality, marketed during the years indicated.

Fluctuation in Australian wool prices has a marked effect on the nation's rural and national income. In 1945-46 the gross value of wool production was \$117,194,000, representing 17.4 per cent of the gross value of production of all rural industries, while in 1950-51, when prices reached a peak, wool was valued at \$1,303,804,000 or 55.6 per cent of the total value of production for all rural industries. The value of wool production fluctuated considerably in subsequent years. In 1971-72 it was \$660,456,000 or 16.0 per cent of the gross value of production of rural industries.

**ESTIMATED GROSS VALUE OF TOTAL WOOL PRODUCTION(a)

(a) Includes shorn, dead and fellmongered wool and wool exported on skins.

### Stocks of wool

Stocks of raw wool held in Australia at 30 June 1972 amounted to 205.8 million kg (greasy basis) of which 33.1 million kg (18.5 million kg as greasy and 14.6 million kg as scoured and carbonised) was held by woollen mills, wool scourers and fellmongers, and 172.7 million kg, assumed to be all greasy, was held by brokers and dealers. Of the wool held by brokers and dealers 53.2 million kg was unsold wool and 119.5 million kg was sold wool held awaiting shipment. These stocks exclude wool on skins, since this wool is not recorded as production until fellmongered in Australia or exported on skins.

### Consumption of wool

Statistics of raw wool consumption published in recent years for the purposes of broad international comparisons are based on the quantities of scoured or carbonised wool used on the woollen and worsted systems (mill consumption), plus quantities used in such processes as felting. Consumption estimates compiled on this basis have obvious defects, as they disregard overseas trade in semi-processed wool (e.g. tops and yarns) as well as woollen goods. Estimates of raw wool used on the woollen and worsted systems and by felt manufacturers in Australia are shown in the following table for the years 1967-68 to 1971-72.

**ESTIMATED CONSUMPTION OF RAW WOOL: AUSTRALIA, 1967-68 TO 1971-72**  
('000 kg)

<i>Year</i>	<i>Greasy basis</i>			<i>Clean equivalent</i>		
	<i>Used on woollen and worsted systems</i>	<i>Used for felt manufacture (including hats)</i>	<i>Total</i>	<i>Used on woollen and worsted systems</i>	<i>Used for felt manufacture (including hats)</i>	<i>Total</i>
1967-68	58,242	1,148	59,390	33,132	545	33,677
1968-69	58,718	1,148	59,866	33,402	545	33,948
1969-70	59,459	1,148	60,606	33,824	545	34,369
1970-71	60,904	1,148	62,052	34,646	545	35,191
1971-72	58,822	1,148	59,970	33,462	545	34,007

As considerable quantities of tops, noils and yarn are exported from Australia, the series on raw wool consumption shown above is over-stated to this extent. The series 'Estimated consumption of processed wool in Australia' provides a more reliable indication of wool consumption in Australia, as allowance has been made for exports of wool in semi-processed form. This series is shown in the following table for the years 1967-68 to 1971-72. Briefly, the series measures consumption of wool in terms of yarn used in Australian mills and other factories to produce woollen cloth and other woollen goods, yarn used for hand knitting purposes, and scoured wool used for felt manufacture. No allowance has been made for overseas trade in woollen piece goods, clothing, etc., because of the obvious difficulties of estimating accurately the wool content of these products.

**Value of wool exported**

The value of wool (other than wool on sheepskins) exported from Australia during 1971-72 was 12 per cent of the total value of exports of merchandise of Australian origin, while the proportion for the five years ended 1971-72 averaged 18 per cent. The values for the five years ended 1971-72, together with the principal countries to which wool was exported, are shown in the following table.

**VALUE OF WOOL EXPORTS: AUSTRALIA(a), 1967-68 TO 1971-72**

(a) Excludes wool exported on sheepskins.

**World sheep numbers and wool production**

The following table shows particulars of the woolled sheep numbers and total production of wool, in terms of greasy, in the principal wool-producing countries of the world, together with estimates of world production of merino, crossbred, and carpet type wool for the latest available years.

In 1971-72 Australia produced 33 per cent of the world total of all types of wool. Other principal wool producers were New Zealand with 12 per cent of the world total, Argentina, 7 per cent, South Africa, 4 per cent, and United States of America, 3 per cent. Production in the U.S.S.R., China, and eastern European countries together amounted to 22 per cent.

Australia's wool clip is predominantly merino. New Zealand and Argentina produce mainly crossbred wool, while the clip of the U.S.S.R. is largely of the carpet type.

(a) Provisional. (b) This group comprises Albania, Bulgaria, The People's Republic of China and Dependencies, Czechoslovakia, East Germany, Hungary, Outer Mongolia, Poland, Romania, Tibet, and U.S.S.R.

**Principal importing countries and sources of supply**

The following table, prepared from information published by the Commonwealth Secretariat, furnishes, in respect of the principal importing countries, details of their imports of wool for 1971 together with the chief sources of supply. The quantities imported refer to the actual weight of wool without distinguishing between greasy and scoured, except in the case of the United States of America, where estimated clean content of wool is quoted.

**PRINCIPAL WOOL IMPORTING COUNTRIES AND SOURCES OF SUPPLY, 1971**

(Source: Information published by the Commonwealth Secretariat, London)  
(Million kg)

Importing country	Quantity imported from(a)—					Total imports
	Australia	New Zealand	Argentina	South Africa	Other countries	
Japan . . . . .	263	21	8	13	3	308
United Kingdom . . . . .	33	58	7	12	41	151
France . . . . .	84	52	6	19	10	171
Italy . . . . .	53	11	3	6	16	89
Belgium . . . . .	29	21	2	..	52	104
Germany, Federal Republic of . . . . .	49	18	6	14	25	111
United States of America(b) . . . . .	11	27	7	2	10	57

(a) Actual weight of greasy and scoured wool.

(b) Imports are in terms of estimated clean content of greasy and scoured wool.

As a considerable transit trade exists between European countries, it must not be assumed that the whole of the imports recorded by these countries is retained for their own consumption. The countries chiefly concerned with the transit trade are the United Kingdom and Belgium.

## Pastoral products: meat

### Australian Meat Board

The Australian Meat Board, which was re-constituted under the *Meat Industry Act* 1964–1969, is the body responsible for controlling the external marketing of Australian beef, mutton and lamb. Powers and membership of the Board prior to 1964 are set out on page 801, Year Book No. 40. Following its reconstitution it consisted of five members representing meat producers, two representing meat exporters, one representing the Commonwealth Government, and an independent Chairman. The Meat Industry Act was amended in 1969 to provide for the appointment of an additional member to represent meat producers. The Board's primary function is to ensure that Australian meat exports are marketed in a manner which will safeguard the long-term interests of the Australian meat industry.

The Board regulates overseas marketing of Australian meat by means of an export licensing system. It has power of control over the kinds of meat that may be exported by licensed exporters to particular places, or to particular agents and representatives. The Board also has power to undertake measures to promote the sale and consumption of meat both in Australia and overseas, and it may purchase and sell meat in its own right for the purpose of market development. However, the exercise of this power is limited to activities aimed at meeting special marketing problems or circumstances which preclude the effective participation of private traders. The Board may also purchase and sell meat, with the approval of the Minister for Primary Industry, for the purpose of administering any international arrangements to which Australia may be a party.

### Meat research schemes

In November 1965 the Commonwealth Parliament passed legislation providing for the extension of the cattle and beef research scheme to cover beef, mutton and lamb research. Details of the beef research scheme were set out on page 1050, Year Book No. 51. Under the new legislation the Cattle and Beef Research Committee was re-constituted as the Meat Research Committee, its powers and functions being similar to those of the former Committee extended to include mutton and lamb research. The Meat Research Committee consists of twelve members—seven meat producer representatives, the Chairman of the Australian Meat Board (Chairman), one representative from the universities engaged in meat research, the Commonwealth Scientific and Industrial Research Organization, the Australian Agricultural Council, and the Department of Primary Industry. The new Committee came into being in March 1966 and the Cattle and Beef Research Committee ceased to exist from that date.

The scheme is financed from the Livestock Slaughter Levy (*see below*). The Commonwealth makes a matching contribution on a \$1 for \$1 basis to meet expenditure on research. The research is conducted by such bodies as the universities, C.S.I.R.O., State Departments of Agriculture and the Bureau of Agricultural Economics.

The Minister for Primary Industry approved a beef research program of \$2,546,000, and a mutton and lamb research program of \$1,306,000 for 1972–73.

### The Livestock Slaughter Levy

The *Livestock Slaughter Levy Act* 1964–1966 imposed a levy on all cattle (over 200 lb dressed weight), sheep and lambs slaughtered within Australia for human consumption. These levies operated from 1 August 1964 and have replaced the charge imposed on meat exports and also subsumed the cattle levy for beef research purposes imposed in 1960 (*see page 909*, Year Book No. 51). In November 1968 legislation was passed amending the Act to provide for an additional levy to finance service and investigation activities relating to meat processing. The amended legislation (the *Livestock Slaughter Levy Act* 1964–1971) now provides three elements in the levy for each class of livestock—an amount to finance meat research; an amount to finance the operations of the Australian Meat Board; and, from 1 January 1969 until 31 December 1974, an amount to finance service and investigation activities relating to meat processing. The first two elements are paid by producers while the third element is paid by meat processors.

Under the Act the total levy may not exceed 75.0c a head for cattle or 7.5c a head for sheep and lambs. The amount levied for research may not exceed 25.0c a head for cattle or 3.3c a head for sheep and lambs while the amount for service and investigation activities relating to meat

processing is set for the period of its operation at 1.0c a head for cattle and 0.1c a head for sheep and lambs. The present operative rate for cattle is 46.0c (25.0c for research; 20.0c to the Australian Meat Board; 1.0c for service and investigation) and for sheep and lambs, 3.85c (1.75c for research; 2.00c to the Australian Meat Board; 0.10c for service and investigation).

#### **United Kingdom long-term purchase arrangements**

Details of the long-term meat contracts with the United Kingdom from 1939 to 1952 and of the Fifteen Year Meat Agreement (1952-67) are given on page 710, Year Book No. 41 and in earlier issues. In September 1953 the trade in meat between the United Kingdom and Australia reverted to private traders. The main features of the arrangements were given in Year Book No. 47, page 960. Details of minimum prices operating and deficiency payments received in recent years under private trading appear in Year Book No. 48 (page 973) and No. 50 (page 1068).

On 30 September 1967 the Fifteen Year Meat Agreement expired, and no new agreement has been negotiated. Australia retained duty-free entry for meat until 1 July 1971 when a variable levy system for beef and veal imports and duties on mutton and lamb were introduced by the United Kingdom Government in preparation for entry into the European Economic Community (E.E.C.).

The United Kingdom became part of an enlarged E.E.C. in 1973 and will progressively adopt the mechanism of the E.E.C. Common Agricultural Policy (C.A.P.) over the period up to 1977. Under the C.A.P., beef and veal imports are mainly controlled by a system of variable levies. At present the C.A.P. does not apply to mutton and lamb but the United Kingdom will gradually increase its duties on mutton and lamb until the level of the full E.E.C. duty (20 per cent) is reached in 1977.

#### **Lamb Guarantee Scheme**

The Australian Meat Board, under the scheme, guaranteed exporters a minimum price on all lambs 36 lb and under shipped to the United Kingdom. The scheme operated from 1962-63 lamb export season until it was discontinued by the Board in March 1972. Details of the scheme are shown in Year Book No. 58, page 811.

#### **United States-Australia Meat Agreement**

In February 1964 the Governments of Australia and the United States concluded an agreement for the regulation of beef, veal and mutton exports from Australia to the United States with the object of promoting the orderly development of the trade in these classes of meat between the two countries. (Details of the Agreement were given on page 820 of Year Book No. 56). In June 1970, the United States advised that it was terminating the Agreement at the end of 1970. Legislation enacted by the United States Congress in 1964, details of which were given in previous issues of the Year Book, provides for restrictions on imports of fresh, chilled and frozen beef, veal, mutton, and goatmeat from all sources if such imports are estimated by the United States Secretary of Agriculture to exceed a predetermined figure (the trigger point) calculated by a formula in the legislation. Should quotas be necessary the total permissible imports would be set some 10 per cent below the trigger point. Until 1968 the estimate of imports did not exceed the trigger point and quotas were not necessary. However, late in that year it appeared likely that quotas would be triggered and to avoid this all major suppliers agreed to restrain shipments. The total restraint level was set approximately half way between the quota level and trigger point. A similar situation arose in 1969 and 1970 and restraints again operated. However in June 1970 the estimate of imports exceeded the trigger point and the United States President suspended the operation of quotas and announced new higher restraint levels for all major suppliers. In 1971 the United States President exercised, as in 1970, his powers under the legislation and announced that the operation of quotas would be suspended as suppliers had agreed to enter into a restraint agreement with the United States to keep the import level to 517,900 tons. In June 1972, the President announced that the restraint arrangements for 1972 had been suspended for the remainder of the year in an effort to control increases in meat prices in the United States. In December 1972 it was announced that the suspension of restraint arrangements would continue into 1973, subject to quarterly review.

**Consumption of beef and veal**

The highest post-war consumption of beef and veal (including canned beef and veal) was 132.7 lb per head in 1956-57. With the buoyant overseas market for beef and the high prices ruling in Australia during the following four years, consumption per head fell substantially, and in 1960-61 amounted to only 88.3 lb. In 1971-72 consumption per head was 91.3 lb, of which 87.0 lb was carcass meat and 4.3 lb was canned meat (in terms of carcass equivalent).

(a) Includes carcass equivalent of boneless beef exported and all fresh and frozen meat shipped as ships' stores.

**Exports of beef and veal**

While beef and veal were previously shipped largely in carcass form, there has been in recent years a substantial increase in the amount of boneless beef exported. From 1958-59 to 1971-72 the quantity of boneless beef shipped exceeded that exported in carcass form. The trade in boneless beef has been developed principally with the United States of America. In 1971-72, the principal markets for Australian beef and veal exports were the United States (570,924,000 lb, valued at \$259,780,000); Japan (105,330,000 lb, valued at \$44,639,000); and the United Kingdom (89,215,000 lb, valued at \$34,421,000).

## Consumption of mutton and lamb

In 1959-60 consumption of mutton and lamb, at 103 lb per head of population, exceeded that of beef and veal for the first time on record. Subsequently, it showed a continuous decline until 1965-66, when it fell to 82.8 lb per head. The 1971-72 figure was 99.0 lb per head or 12.0 lb per head more than beef and veal.

## Other pastoral products

## Tallow

Details of tallow consumption are collected from the principal factories using tallow. Recorded usage of inedible tallow in factories for the years 1968-69 and 1969-70 was as follows: for soap-making: 1968-69, 74,764,573 lb; 1969-70, 72,891,206 lb; for products other than soap: 1968-69, 24,714,887 lb; 1969-70, 25,966,499 lb. Particulars for 1970-71 were not collected. Figures for 1971-72 are not yet available. Details of edible tallow usage in factories are not available.

Particulars of exports of edible and inedible tallow of Australian origin are shown in the following table for the five years 1967-68 to 1971-72.

**TALLOW: EXPORTS, AUSTRALIA, 1967-68 TO 1971-72**

(cwt)

	1967-68	1968-69	1969-70	1970-71	1971-72

Inedible. . .	1,654,071	2,035,529	3,019,497	2,739,091	3,930,480
<b>Total . . .</b>	<b>1,742,536</b>	<b>2,237,376</b>	<b>3,367,502</b>	<b>3,088,038</b>	<b>4,265,336</b>

**Overseas trade in hides and skins**

The value of cattle and horse hides, sheep and other skins, and skin pieces sent overseas during 1971-72 amounted to \$82,073,000, compared with a total of \$73,566,000 in 1970-71 and \$89,360,000 in 1969-70.

**EXPORTS OF SHEEPSKINS WITH WOOL: AUSTRALIA  
1969-70 TO 1971-72**

In 1971-72 a total of 2,244,000 sheepskins without wool were exported, valued at \$1,000,000. Of these, sheepskins without wool to the value of \$197,000 (20 per cent) were shipped to the United States of America, \$175,000 (18 per cent) to the United Kingdom and \$162,000 (16 per cent) to France.

The export trade in cattle hides and calfskins during 1971-72 was distributed among the main importing countries as follows: Japan, \$7,263,000, Poland, \$3,399,000, the Federal Republic of Germany, \$3,009,000, and Italy, \$2,518,000. The total quantity exported was 177,523,000 lb, valued at \$28,095,000.

The exports of furred skins in 1971-72 were valued at \$1,692,000, of which kangaroo and wallaby skins constituted \$1,355,000 and rabbit and hare skins \$165,000. In 1970-71 they accounted for \$1,847,000 and \$405,000 respectively, out of a total of \$2,399,000. The skins were shipped principally to the United States of America, Italy, the Federal Republic of Germany, and Japan; the values shipped to each in 1971-72 being \$660,000, \$424,000, \$223,000 and \$90,000 respectively.

The quantity of cattle hides, including calfskins, imported into Australia during the year 1971-72 amounted to 776,000 lb, valued at \$145,000. The chief source of supply was New Zealand.

**OTHER RURAL INDUSTRIES: DAIRYING, PIG, POULTRY AND  
BEE FARMING****The dairying industry**

Australian dairy cattle have shown steady improvement in quality, as demonstrated by milk yield, over the years. This is attributable to improved breeding, associated with herd recording, better feeding resulting from the use of improved pastures, and better farming methods arising from the development of modern farm machinery and the application of the results of research.

The Australian dairying industry is conducted under conditions ranging from tropical to temperate and mediterranean type climates, and in general, is confined to the coastal and near coastal regions where rainfall and topography are favourable. These conditions are found in parts of the eastern, southern and south-western coasts. Inland districts include the lower north-east of Victoria, the south-western slopes of New South Wales, the fertile Darling Downs in Queensland, and the irrigated districts of the Riverina in New South Wales and northern Victoria.

The manufacturing and processing sections of the industry are well advanced technologically and certain techniques and equipment developed in Australia are now being adopted overseas. State Agricultural Departments give advice on approved methods of production and inspect animals, buildings and marketable produce, to ensure that the latest advances in technology are passed on to the farmer and that hygiene standards are maintained at a high level.

### **Marginal Dairy Farms Reconstruction Scheme**

The Marginal Dairy Farms Reconstruction Scheme was introduced in July 1970 and is to operate for a period of four years. It provides funds up to a maximum of \$25 million, to State Governments to purchase marginal dairy farms from producers who wish to leave the industry and to enable them to sell the land on favourable terms to neighbouring farmers who want to build up their holdings to an economic size. By the end of February 1973, 1,041 dairy farms had been offered to the States for acquisition; purchase and subsequent sale of 520 had been arranged; 323 applications had been rejected; and 170 applications had been withdrawn or had lapsed. The cost of purchase to that date amounted to \$13 million. The scheme has had its greatest impact in Queensland where 75 per cent of the build-ups effected have been located.

### **Marketing of dairy products**

The export trade is regulated by the terms of the *Commonwealth Customs Act* 1901-1971 and the *Commonwealth Commerce (Trade Descriptions) Act* 1905-1966 and regulations thereunder. This legislation requires that the true trade descriptions, etc., be marked on all produce intended for export, while official inspection ensures the maintenance of purity and quality. Upon request of the exporter the goods are given a certificate by the inspector.

Details of the *Dairy Produce Export Control Act* 1924-1966 and of the Australian Dairy Produce Board constituted under it were given in earlier issues of the Year Book (see No. 48, pages 999-1000). The Act was amended in 1972 to clarify the general provisions enabling the Board to expand existing markets and secure new ones and to provide the Board with specific power to participate in commercial ventures as a means of expanding existing markets or securing new ones. The administrative expenses of the Australian Dairy Produce Board and other sundry expenditure were met from the proceeds of a levy imposed by the *Dairy Produce Export Charges Act* 1964 (see Year Book No. 51, page 1070). In 1965 this Act, together with the *Dairy Produce Levy Act* 1958, was replaced by the *Butter Fat Levy Act* 1965-1972 (see page 828).

### **Equalisation schemes**

Reference is made to the butter and cheese equalisation schemes in Year Book No. 48, pages 998-9. Particulars of the returns realised on local and overseas sales and of the average equalisation rate for the years ended June 1968 to 1973 are given on page 834 of this issue. Details are also given on page 833 of the wholesale prices of butter and cheese for home consumption as determined by the Australian Dairy Industry Council.

An equalisation scheme for casein similar to that for butter and cheese has been operated since 1952 by the Commonwealth Dairy Produce Equalisation Committee Ltd. Average realisations per cwt under the scheme were \$24.789 in 1969-70, \$24.283 in 1970-71, \$28.988 in 1971-72. For 1972-73 the interim rate is \$27.50 (Details of returns for earlier seasons are given in previous issues of the Year Book.)

From 1 July 1970 a skim milk powder equalisation scheme was commenced by the Commonwealth Dairy Produce Equalisation Committee Ltd. For 1970-71 the final rate was \$211.181 a ton and for 1971-72 \$286.088 a ton. For 1972-73 the interim rate is \$275.00.

Statutory support for the equalisation scheme was provided by legislation passed by Parliament during 1970 and ratified by producers at a referendum held in February 1971. The legislation consists of *The Dairying Industry Equalisation Act* 1970, *The Dairying Industry Levy Act* 1970, and *The Dairying Industry Levy Collection Act* 1970. (See Year Book No. 57, page 818).

The basic element of the legislation is the establishment of a fund by way of a levy on the production of butter, butteroil, cheese, casein and such other dairy produce as may be prescribed to provide the necessary finance for equalisation payments. The legislation has been designed to permit the imposition of the levy on one product or a number of products as circumstances warrant. It will not be implemented unless there is a specific need created such as by the withdrawal of an important manufacturer from the present voluntary equalisation scheme.

### Commonwealth bounties and stabilisation plans

*Butter and cheese.* Under the provisions of the various Dairy Industry Assistance Acts, the first of which was passed in 1942, the Commonwealth Government has provided bounties on milk supplied for the manufacture of butter and cheese. Bounties were paid on a seasonal basis prior to 1 April 1946, but from that date have been on a flat rate basis. Bounties are distributed by the Commonwealth Dairy Produce Equalisation Committee Ltd, through factories, to milk and cream producers by payments on butter and cheese manufactured. Details of the three five-year stabilisation plans which operated up to 30 June 1962, will be found in Year Book No. 49, page 1084. Information regarding the plan which operated during the five years ended 30 June 1967 appears in Year Book No. 52, page 961 and details of the plan which concluded on 30 June 1972 are given in Year Book No. 58 page 818.

A new five-year stabilisation plan came into operation on 1 July 1972 which provided for continued financial assistance for butter and cheese producers. The level of assistance is to be determined annually in the light of the needs and circumstances of the industry, but will be not less than \$27 million annually. In respect of 1972-73 season production, the assistance has been fixed at \$27 million. The underwriting of final minimum equalised returns on butter and cheese was not continued under the new plan, but for the 1972-73 season, the Government guaranteed to compensate the Commonwealth Dairy Produce Equalisation Committee Ltd, for any loss incurred, as a result of fixing an interim equalisation value, which would enable factories to pay suppliers of cream for butter manufacture an opening pay rate of 34 cents per lb for commercial butter. This undertaking was in respect of one year only.

### Dairy industry stabilisation fund

Amounts realised on exports of butter and cheese were, in 1948-49 and 1949-50, in excess of the f.o.b. equivalent of the then guaranteed return and were credited to the Dairying Industry Stabilisation Fund, which was established in July 1948 for the purpose of stabilising returns from exports. During 1951-52 the Stabilisation Fund met the deficiency in respect of all exports which did not earn sufficient to meet the basic return to the factory. From 1 July 1952 to 30 June 1957 it was available to the industry to be used, in whatever manner it considered desirable, to make good any deficiency in respect of all exports other than the 20 per cent provided for under the Commonwealth Government's Five-year Stabilisation Plan. The Act was amended in 1957 to enable the Board to use the fund for such other purposes as are approved by the Minister for Primary Industry, and this amendment was later extended by the *Dairying Industry Act* 1967 to the present time. The balance of accumulated funds in the Dairying Industry Stabilisation Fund at 30 June 1972 totalled approximately \$6,595,000. The major portion of the fund represents capital and other investments in milk recombining plants now established by the Board in Bangkok, Cambodia, Djakarta and Manila.

*Processed milk products.* As part of the Five Year Stabilisation Plan the Government provided, under the *Processed Milk Products Bounty Act* 1962-1972, for the payment of a maximum amount of \$800,000 as a bounty on exports of processed milk products in each year. Details of earlier bounties are given in Year Book No. 58, page 818.

*Whole milk.* In addition to the bounties referred to above, the Commonwealth Government subsidised the production of whole milk consumed directly from 1943-44 to 1948-49. Details of the amounts distributed during each year will be found in Year Book No. 38, page 1031.

### Extension, research and promotion of the dairying industry

*Dairy Industry Extension Grant.* An annual grant of \$500,000, to be expended by State Governments for the purpose of promoting improved farming practices in the dairying industry, was first made by the Commonwealth Government for the five years from 1 July 1948. The grant was renewed at the same level until 30 June 1963 when it was increased to \$700,000 per annum. On 1 July 1966 the Dairy Industry Extension Grant became part of the new Commonwealth Extension Services Grant, and assistance to the State agricultural departments for extension services to the dairying industry continued to be maintained and enlarged from funds from this source.

*Dairy industry research and sales promotion.* At the request of the Australian Dairy Industry Council, legislation was enacted in 1958 to provide for a sales promotion campaign for butter and cheese in Australia and also for research into industry problems. The legislation provided for a statutory levy on the manufacture of butter and cheese (the Dairy Produce Levy) which was initially set at rates of 0.104c per lb for butter and 0.052c per lb for cheese, the proceeds being divided equally between research and sales promotion. The rates of levy operative from November 1959 were 0.156c per lb for butter and 0.078c per lb for cheese, of which two-thirds was allocated to sales promotion and one-third to research.

In August 1964 the legislation was amended to include butter powder, at the same rates as for butter, and butteroil and ghee at 0.065c per lb for research and 0.130c per lb for sales promotion. In 1965 the Dairy Produce Levy Act was repealed and replaced by the *Butter Fat Levy Act 1965-1972* which provides for the amalgamation of the three levies into one levy on butterfat used in the manufacture of butter, cheese and related products. The maximum rate of levy in the Act is 48 cents per cwt of butterfat, and the prescribed rate operative since 1 October 1971 is 48 cents per cwt (24 cents for promotion and 24 cents for administration and overseas market development).

The Commonwealth Government agreed to contribute one half of the costs incurred on approved projects included in the program of research, with a maximum contribution of \$1 for \$1 against funds raised by way of levy and allocated to research. The sales promotion program is financed solely by the levy. The following table lists the amounts of levies collected for research and sales promotion during the five years 1967-68 to 1971-72.

**BUTTERFAT LEVY: AMOUNTS COLLECTED FOR RESEARCH AND SALES PROMOTION, 1967-68 TO 1971-72**  
(£)

	1967-68	1968-69	1969-70	1970-71	1971-72
Research(a) . . .	363,700	367,720	413,277	387,088	370,824
Sales promotion . . .	804,300	811,860	908,521	923,494	886,911
<b>Total collected(a) .</b>	<b>1,168,000</b>	<b>1,179,580</b>	<b>1,321,798</b>	<b>1,310,582</b>	<b>1,257,735</b>

(a) Excludes amounts contributed by the Commonwealth Government.

The research scheme is controlled by a statutory body, the Dairying Research Committee. Its function is to recommend to the Minister for Primary Industry on the operative rate of levy and on the allocation of the research funds. (The sales promotion program continues to be administered by the Australian Dairy Produce Board.) The Chairman of the Board is also Chairman of the Dairying Research Committee.

In February 1972, the Commonwealth Government agreed to industry proposals to broaden the scope of the research levy so that it would apply to all producers. Thus dairy farmers supplying milk for human consumption and for condensery products are now levied.

To implement the new scheme, five new Acts were passed by the Government: *Dairying Research Act 1972*; *Dairying Research Levy Act 1972*; *Dairying Research Levy Collection Act 1972*; *Dairy Produce Sales Promotion Act 1972*; *Butter Fat Levy Act 1972*.

The levies are payable either on a butterfat or gallonage basis, according to the normal method of payment to the producer by the dairy factory or authority. The maximum rate of levy is 12 cents per cwt butterfat or 0.04 cents per gallon of milk. The operative rates of levy are prescribed by Regulations. The new scheme came into operation on 1 July 1972.

The sums raised for research purposes from these levies will increase by approximately \$150,000 per year, which with matching contributions from the Commonwealth Government will make over \$1 million per annum available for dairying research.

## Cattle for milk production

## DAIRY BREED BULLS, AND COWS AND HEIFERS USED OR INTENDED FOR PRODUCTION OF MILK OR CREAM, 31 MARCH 1968 TO 1972

				Cows and heifers used or indented for production of milk or cream for sale

(a) The number of units indicates the number of cows that can be milked simultaneously, i.e. the cow capacity of installed milking machines. (b) Not collected.

## Production of milk

The quantity of milk produced by a dairy cow can be as high as 1,000 gallons a year, and varies greatly with breed, locality and season. For all dairy cows and for all seasons for Australia prior to 1916 production averaged considerably less than 300 gallons per annum. Largely owing to an improvement in the quality of the cattle and the increased application of scientific methods the 300 gallon average has been exceeded in each year since 1924. In the last five years an average of 551 gallons per cow per annum has been obtained. In 1971-72 the average yield was 577 gallons. The annual average yields per cow shown in the following table are obtained by dividing the total production of whole milk for the year ended June by the mean of the number of cows in milk and dry and house cows at 31 March of that year and of the preceding year. They are, in effect, based on the approximate number of cows which were in milk during any part of the year. The average shown is, therefore, less than that for cows which were yielding during the greater part of the year, but it may be accepted as sufficiently reliable to show the general trend.

**AVERAGE MILK PRODUCTION PER COW: STATES AND AUSTRALIAN CAPITAL TERRITORY  
1967-68 TO 1971-72**  
(Gallons)

<i>Year</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>A.C.T.</i>	<i>Aust.</i>
1967-68	416	596	354	590	502	581	<i>n.a.</i>	465	497
1968-69	393	663	306	708	546	647	<i>n.a.</i>	486	525

1971-72	461	687	363	687	568	638	214	501	577

In the following table particulars of the production of whole milk in the various States and Territories are shown for the years 1967-68 to 1971-72. Victoria is the principal milk-producing State, and in 1971-72 the output from that State, 874 million gallons, represented 56 per cent of total production. Output from New South Wales in 1971-72 was 265 million gallons (17 per cent of the total) and that of Queensland 167 million gallons (11 per cent). Production in the remaining States and Territories accounted for 16 per cent.

In 1971-72, 56.8 per cent of the total milk supply was used for butter, 10.6 per cent for cheese, 8.0 per cent for processed milk products, and 24.7 per cent for other purposes.

**PRODUCTION AND UTILISATION OF WHOLE MILK: AUSTRALIA  
1967-68 TO 1971-72**  
(<sup>'000</sup> gallons)

<i>Year</i>	<i>Quantity used for—</i>				
	<i>Total production</i>	<i>Factory butter</i>	<i>Factory cheese</i>	<i>Processed milk products(a)</i>	<i>Other purposes(b)</i>
1967-68	1,497,484	892,898	149,444	98,555	356,587
1968-69	1,532,096	907,878	158,583	98,945	366,690
1969-70	1,654,751	1,021,105	160,594	103,557	369,494
1970-71	1,594,555	926,626	164,150	129,080	374,699
1971-72	1,568,378	890,863	165,878	124,807	386,830

(a) Quantities of milk used to produce two or more products (for example, initially as full cream milk and subsequently as skim milk) are counted once only. (b) Principally fluid milk for domestic purposes. Includes milk used for farm production of butter and cheese.

PLATE 48

**Production of butter, cheese and processed milk products**

In 1971-72 factories classified to the industry group Milk Products comprising A.S.I.C. classes 2121 Liquid milk and cream factories, 2122 Butter factories, 2123 Cheese factories, 2124 Ice cream and frozen confections factories and 2125 Milk products n.e.c. factories numbered 388 and were distributed among the States, as follows: New South Wales, 97; Victoria, 142; Queensland, 60; South Australia, 41; Western Australia, 23; Tasmania, 22; Northern Territory, 1 and Australian Capital Territory, 2. Details for 1970-71 were not collected.

Factory production of butter in 1971-72 was 431,579,000 lb. This was 59,960,000 lb (12.2 per cent) below the record of 491,539,000 lb attained in 1969-70.

**BUTTER PRODUCTION IN FACTORIES: STATES, 1967-68 TO 1971-72**  
(<sup>0</sup>000 lb)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.

**Local consumption of butter and cheese**

Following the cessation of butter rationing after the 1939–45 War, consumption per head rose to 31.2 lb in 1951–52. However, in later years it gradually declined, and in 1971–72, at 19.2 lb per head, it reached its lowest level since the war. Consumption of cheese per head has risen steadily in recent years and by 1971–72 it attained a record figure of 9.2 lb per head.

(a) Interim rates.

**Overseas trade in dairy products**

The production of butter and cheese in Australia is considerably in excess of local requirements, and consequently a substantial surplus is available for export overseas. In normal circumstances the extent of this surplus is chiefly dependent upon seasonal conditions.

Exports of butter in 1971-72 amounted to 78.3 million lb, compared with 155.4 million lb in 1970-71. Exports of cheese in these years were 73.5 million lb and 80.4 million lb respectively. The principal importing country for Australian butter in 1971-72 was the United Kingdom, accounting for 30.2 per cent of total exports. In 1971-72 Japan was the principal importing country for Australian cheese with 42.3 per cent of total shipments.

All butter and cheese exported comes under the provisions of the Exports (Dairy Produce) Regulations and is subject to supervision, inspection and examination by officers appointed for that purpose. These commodities are graded according to quality, which has been fixed by regulation

as follows: flavour and aroma, 50 points; texture, 30 points; and condition, 20 points. Butter and cheese graded at 93 to 100 points is of choicest quality; at 90 to 92 points, first quality; butter at 88 to 89, cheese at 86 to 89 points, second quality; and butter at 83 to 85 points, pastry or cooking quality.

In the following table particulars are given of the relative proportions of butter and cheese graded for export according to quality. Further details for 1969-70, which include actual quantities by States, will be found in *Rural Industries*, Bulletin No. 8.

#### BULK BUTTER AND CHEESE GRADED FOR EXPORT: AUSTRALIA, 1969-70 TO 1971-72

(a) Excludes butter concentrate, ghee and ship's stores. (b) Excludes ships' stores. (c) Includes pastes and spreads. (d) Includes malted milk.

### The pig industry

In line with the general trend of increased specialisation common to most of the rural industries, pig farming has developed into a separate industry being no longer mainly associated with the dairy industry.

In 1971, a research scheme was established for the Australian Pig Industry. It is similar to those already operating for the benefit of other major rural industries such as wool, meat, wheat, dairy, tobacco, poultry and the dried fruit industries. Finance is provided from a levy of 5 cents per head on all pig slaughterings and this is matched, on a dollar for dollar basis from Commonwealth sources. Funds currently available for research are \$237,400.

The research program is administered by a Pig Industry Research Committee. This Committee, which is representative of the industry and research organisations, makes recommendations to the Minister for Primary Industry relating to the rate of levy and expenditure from the Pig Industry Research Trust Fund.

At 31 March 1972 the number of pigs in Australia reached a record level of 3,198,683 which represented an increase of 608,488 (23.5 per cent) on the previous record at 31 March 1971 (2,590,195).

## The poultry industry

Once part of the mixed farming sector, the poultry industry is now a highly specialised and distinct industry. The bulk of production is obtained from this commercial source, though many farm households and some private homes in suburban areas keep poultry to supply their domestic needs and some supplies from this source are also marketed. Because the data from this latter sector is incomplete, details of poultry numbers throughout Australia are not published. There is an increasing tendency for specialisation within the industry into hatcherymen, egg producers and broiler producers. These sectors of the industry each have separate statistics. There are also separate research schemes for the egg and meat chicken industries. Both sectors are good examples of the general movement towards specialised, large scale capital intensive production which is common to all rural industries.

## Stabilisation scheme for the egg industry

A Commonwealth industry stabilisation scheme for the egg industry has been in operation since 1 July 1965. The principal features of the scheme are embodied in three Commonwealth Acts—*Poultry Industry Levy Act 1965-1966*, *Poultry Industry Levy Collection Act 1965-1966*, and *Poultry Industry Assistance Act 1965-1966*.

The scheme provides for the imposition of a levy on hens over six months of age kept for commercial purposes. The money obtained from the levy is used to meet trading losses on surplus eggs. Previously, returns to producers were equalised by State Egg Boards, who imposed an equalisation deduction to cover deficits which resulted from sales to overseas markets.

In determining the rate of the hen levy, the Minister for Primary Industry is required to take into consideration any recommendations by the Council of Egg Marketing Authorities of Australia (which consists of all members of the State Egg Marketing Boards) and is precluded from prescribing a rate in excess of such recommendations. The maximum rate of levy permitted under the legislation is \$1 per hen per annum. The levy is payable fortnightly by the owner of the hen. The levy operated at its maximum in 1970-71 and 1971-72. The fortnightly rate of levy in accordance with the recommendations of the Council of Egg Marketing Authorities of Australia was 4 cents for the first 24 fortnights of 1970-71 and 2 cents per fortnight for the remaining two fortnights. The rate of levy for 1971-72 reverted to 4 cents except for the last fortnight of 1971-72 when no levy was imposed.

Exemptions from payment are granted on the first twenty hens in each flock and also on a substantial proportion of broiler breeder hens. The eggs produced by broiler breeder hens which are not used for hatching determine the proportion of those hens on which the levy becomes payable in accordance with a formula incorporated in the legislation.

By arrangement between the Commonwealth and State Governments, the State Egg Boards collect the levy due in each State from individual producers and remit the total amount to the Commonwealth (the Department of Primary Industry collects the levy in the Australian Capital Territory). The Commonwealth Government pays into the Poultry Industry Trust Fund amounts equal to the receipts obtained from the hen levy. These amounts totalled \$12,991,000 in 1971-72 (\$12,755,000 in 1970-71). Payments from the Fund are made to the State Governments for financial assistance to the poultry industry, and are authorised by the Minister for Primary Industry, after consideration has been given to the recommendations by the Council of Egg Marketing Authorities of Australia. Payments from the Trust Fund totalled \$13,225,000 in 1971-72 (\$12,505,000 in 1970-71).

## Research

The *Poultry Industry Assistance Act 1965-1966* permits expenditure from the Poultry Industry Trust Fund to be made for research. The Commonwealth Government has agreed to match expenditure from this Fund on a \$1 for \$1 basis with a limit to its contribution of \$100,000 per annum. There is no restriction on the amount which may be expended from the Fund for research purposes.

Research projects are recommended by the Council of Egg Marketing Authorities of Australia for approval by the Minister for Primary Industry. Expenditure may be approved for scientific, technical or economic research, the publication of reports thereon, the training of persons for research, and the dissemination of information and advice on scientific, technical or economic matters.

### Chicken Meat Research

In June 1969, a research scheme for the chicken meat industry was established along lines similar to those operating for the wool, wheat, dairy, meat, tobacco and poultry industries. The operative Acts are the *Chicken Meat Research Act*, 1969, the *Meat Chicken Levy Act*, 1969 and the *Meat Chicken Collection Act*, 1969. This legislation provides for a levy of one-tenth of a cent on each meat chicken hatched before 1 July 1972 and, thereafter, for a levy at a prescribed rate not exceeding one-quarter of a cent per meat chicken hatched. Hatcheries, hatching less than 20,000 meat chickens per annum, are exempt from the levy. The legislation also provides that the industry levy be paid into a Trust Account and that research expenditure therefrom be matched on a \$1 for \$1 basis by the Commonwealth. On this basis, it is estimated that funds currently available for research will be approximately \$240,000 per annum.

### Marketing of eggs

Details of the *Egg Export Control Act* 1947-1966 were given in earlier issues of the Year Book (see No. 47, page 997).

### Chicken hatching and poultry slaughterings

Statistics shown in the following section have been compiled on a Commonwealth basis since 1965-66 from returns supplied by commercial chicken hatcheries (i.e. those making sales of day-old chicks) and by commercial poultry slaughtering establishments. Poultry farmers hatching chicks solely for replenishing their own flocks, producers in the Northern Territory and the many very small producers are excluded from the collection. However, the statistics represent a high level of coverage in respect of commercial hatcheries and slaughtering establishments.

### Poultry slaughtered for human consumption

No allowance has been made in the following figures for interstate movement of dressed poultry or changes in stocks held, and figures therefore do not necessarily represent the level of consumption in the States concerned.

Statistics for poultry slaughtered in Queensland are based on numbers slaughtered as collected by the Queensland Department of Primary Industries. From 1968-69, New South Wales slaughtering statistics include poultry slaughterings by producers in the Australian Capital Territory. Prior to that year, Australian Capital Territory slaughtering statistics were not collected.

<b>Total(a)</b> . . . . .	<b>40,076</b>	<b>37,952</b>	<b>51,965</b>	<b>65,562</b>	<b>63,549</b>

(a) Excludes Tasmania.

In addition to liquid whole egg, production was also recorded for liquid egg whites and liquid egg yolks. Output in 1971-72 amounted to 12,489,000 lb and 9,008,000 lb respectively, compared with 8,329,000 lb and 5,699,000 lb respectively, in the previous year. These figures exclude small quantities produced in Tasmania for which details are not available.

**Consumption of eggs and egg products**

Because of the operation of producers outside the control of the Egg Boards and the extent of 'back-yard' poultry-keeping, for which no statistics are collected, figures relating to total egg production must be accepted with some reserve. The production shown in the following table, together with details of exports and consumption, is based upon the records of Egg Boards for production from areas under their control, plus estimates of production from uncontrolled areas and from 'back-yard' poultry-keepers.

**Overseas trade in poultry products**

Australian exports of shell eggs in 1971-72 amounted to 5,909,000 dozen compared with 3,990,000 dozen in 1970-71. The main outlets for Australian eggs in 1971-72 were Hong Kong (1,713,000 dozen), Kuwait (1,029,000 dozen), the Union of Arab Emirates (1,238,000 dozen), and Bahrain (600,000 dozen).

**EXPORTS OF POULTRY PRODUCTS: AUSTRALIA  
1969-70 TO 1971-72**

		Quantity			Value (\$'000 f.o.b.)		
		1969-70	1970-71	1971-72	1969-70	1970-71	1971-72

(a) Includes day-old chicks.

Imports of canned poultry in 1971-72 amounted to 273,000 lb, valued at \$76,000, compared with 470,000 lb, valued at \$116,000, in 1970-71.

**The bee-farming industry****Production of honey and bees-wax**

Although practised as a separate industry, bee-farming is also carried on in conjunction with other branches of farming. A feature of the industry is that it consists mainly of itinerant apiarists operating on a large scale with mobile equipment. Some of these apiarists move as far afield as from Victoria to Queensland in an endeavour to provide a continuous supply of nectar from flora suitable for their bees. Production of honey in 1971-72 amounted to 44,621,000 lb (116.2 lb per productive hive) compared with 42,165,000 lb (112.3 lb per productive hive) in 1970-71. Bees-wax produced in 1971-72 was 582,000 lb compared with 587,000 lb in the previous year.

In the following tables, statistics for 1971-72 for each State are confined to apiarists with five or more hives, except in New South Wales where details relate to beekeepers with six or more hives.

**BEEHIVES, HONEY AND BEES-WAX: STATES AND A.C.T., 1971-72**

State or Territory	Beehives(a)			Honey produced		Bees-wax produced

**Honey levy**

A levy is imposed on domestic sales of honey for the purposes of financing the operations of the Australian Honey Board. The current rate of levy which became effective on 1 November 1971, is, five-tenths of a cent per lb, but under the provisions of the *Honey Levy Act* 1962-65, it can be increased by regulation to a maximum of one cent per lb. The proceeds of this levy may be expended on the regulation of Australian exports of honey and on associated promotional and research activities. In 1969-70, 1970-71 and 1971-72, collections amounted to \$103,000, \$108,000 and \$122,000 respectively. The sum made available for research (\$5,000 per annum in recent years) is matched by the Commonwealth with funds from the Special Research Grant.

**Overseas trade in bee products**

The principal importer of Australian honey in 1971-72 was the United Kingdom, accounting for 43.8 per cent, by value, of total exports.

Bees-wax was exported mainly to the United Kingdom and Japan in 1971-72.

 For details of these indexes see Chapter 29, Miscellaneous.

## CHAPTER 23

# WATER CONSERVATION AND IRRIGATION

## RESOURCES, UTILISATION AND NATIONAL AND INTERSTATE ASPECTS

Official Year Book No. 51, pages 228-31, contains a description of recent developments in the measurement of Australia's water resources. For information concerning general, descriptive and historical matter *see also* Year Book No. 37, pages 1096-1141.

An article on droughts in Australia appeared in Year Book No. 54, pages 991-6.

For further details on geographical and climatic features determining the Australian water pattern, *see* the chapter Physical Geography and Climate; on water supply and sewerage in metropolitan areas, cities and towns, the chapter Public Finance; and on the generation of hydro-electric power, the chapter Electric Power Generation and Distribution, of this issue.

A series of maps showing the location of major dams and reservoirs and the various irrigation schemes operating in each of the States may be found on pages 259-65 of Year Book No. 46, and a map showing the extent of known artesian basins throughout Australia is shown on page 273 of Year Book No. 48.

### Water resources and their utilisation

#### Surface supplies

An assessment of Australia's surface water resources has been made, based on measured and estimated stream flows within 197 river basins, as follows. The total average annual discharge of Australian rivers has been assessed at 280 million acre feet. This can be divided into 108 million acre feet measured discharge and 172 million acre feet estimated for areas where there are generally no gauging records. For the whole area of Australia (approximately 3 million square miles) only 1.9 million square miles are regarded as contributing to stream flow (i.e. there is practically no flow from Western Plateau drainage division and from arid parts of other divisions).

The flow of Australian rivers is small in comparison with the flow of rivers in other continents, some examples of which, expressed as mean annual discharges in millions of acre feet, are: Amazon, 2,950; Mississippi, 465; Mekong, 405; Niger, 308; Volga, 205; and the ten major rivers of the United States of America in the aggregate, 900.

#### Major dams and reservoirs

The table below lists existing major dams and reservoirs, together with those under construction and those projected, at June 1972. The list is confined to dams and reservoirs with a capacity of 100,000 acre feet or more. There are many others of smaller capacity in Australia. As a general rule, the figures shown for the height of wall (feet) refer to the vertical distance measured from the lowest point of the general foundations to the 'crest' of the dam, i.e. the level of the roadway or walkway on the dam.

#### MAJOR DAMS AND RESERVOIRS IN AUSTRALIA

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
EXISTING DAMS AND RESERVOIRS				
Lake Argyle (Ord River)	Near Wyndham, Western Australia	4,600,000	323	For irrigation. Flood storage capacity above full supply level is 28,000,000 acre feet
Eucumbene	Eucumbene River, New South Wales	3,890,000	381	Part of Snowy Mountains Hydro-electric Scheme
Eildon	Upper Goulburn River, Victoria	2,750,000	260	Storage for irrigation and for the generation of electricity
Hume	Murray River, near Albury, New South Wales	2,480,000	167	Part of Murray River Scheme—Storage for domestic, stock and irrigation purposes. Hydro-electric power also developed
Miena	Great Lake, Tasmania	1,710,000	60	Storage for Poatina hydro-electric power station

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued*

<i>Name</i>	<i>Location</i>	<i>Capacity (acre feet)</i>	<i>Height of wall (feet)</i>	<i>Remarks</i>
<b>EXISTING DAMS AND RESERVOIRS—<i>continued</i></b>				
Warragamba . . .	Warragamba River, New South Wales	1,670,000	450	For Sydney water supply. Also provides for generation of hydro-electricity
Menindee Lakes Storage	Darling River, near Menindee, New South Wales	1,468,700	60	Part of Darling River Water Conservation Scheme
Burrendong . . .	Macquarie River, near Wellington, New South Wales	1,361,000	250	Storage for rural water supplies and flood mitigation
Blowering . . .	Tumut River, New South Wales	1,322,400	368	For regulation of discharges from stations of Snowy Mountains Hydro-electric Scheme, primarily for irrigation but also for hydro-electric power generation
Wyangala . . .	Lachlan River, New South Wales	987,000	280	Storage for domestic stock, and irrigation purposes
Burrinjuck . . .	Murrumbidgee River, New South Wales	837,000	264	Storage primarily for irrigation also production of hydro-electric power
Talbingo . . .	Tumut River, New South Wales	747,000	530	Part of Snowy Mountains Hydro-electric Scheme
Somerset . . .	Stanley River, Queensland	735,000	173	Brisbane-Ipswich water supply, flood mitigation and small hydro-electric power station
Jindabyne . . .	Snowy River, New South Wales	558,000	235	Part of Snowy Mountains Hydro-electric Scheme
Lake Victoria . . .	Murray River, near South Australian border, in New South Wales	551,700	..	Natural off-river storage for irrigation in South Australia. Storage improved by construction of embankments and control regulators
Lake Echo . . .	Lake Echo, Tasmania	442,000	60	Storage for Lake Echo hydro-electric power station (and seven others downstream)
Clark . . .	Derwent River, Tasmania	434,000	220	Storage for Butler's Gorge and Tarraleah hydro-electric power stations (and six others downstream)
Keepit . . .	Namoi River, near Gunnedah, New South Wales	345,300	177	Storage primarily for irrigation also production of hydro-electric power
Arthur Lakes . . .	Source of Lake River, near Great Lake, Tasmania	343,000	50	Part of Great Lake hydro-electric power development
Waranga . . .	Goulburn River, Victoria	333,400	45	For irrigation storage
Tinaroo Falls . . .	Barron River, North Queensland	330,000	155	For irrigation purposes in the Mareeba-Dimbulah area
Mokoan . . .	Winton Swamp, near Benalla, Victoria	300,000	35	For irrigation storage
Glenbawn . . .	Hunter River, near Scone, New South Wales	293,200	251	Storage for irrigation purposes and flood mitigation
Rocklands . . .	Glenelg River, Victoria	272,000	93	Part of Wimmera-Mallee domestic and stock water supply system
Eppalock . . .	Campaspe River, near Heathcote, Victoria	252,860	150	To supplement supply to Bendigo and for irrigation
Tantangara . . .	Murrumbidgee River, New South Wales	206,000	148	Part of Snowy Mountains Hydro-electric Scheme
Devils Gate . . .	Mersey River, North Tasmania	190,000	250	Storage for Mersey Forth power development
Avon . . .	Avon River, New South Wales	173,800	232	Part of Sydney water supply
Upper Yarra . . .	Yarra River, Victoria	162,000	293	For Melbourne water supply
Wuruma . . .	Nogo River, Central Queensland	157,000	151	For irrigation along Burnett River
Glenmaggie . . .	Gippsland, Victoria	154,300	121	Storage for irrigation
Lake St Clair . . .	Central Highlands, Tasmania	154,200	..	Improved natural storage for eight Derwent River hydro-electric power stations
Wellington . . .	Collie River, Western Australia	150,100	121	For supply of water to irrigation districts and to agricultural areas and country towns
Grahamstown . . .	Grahamstown River, near Newcastle, New South Wales	147,000	35	To supplement supply to Newcastle and district
Koombooloomba . . .	Tully River, North Queensland	146,000	170	For hydro-electric and irrigation purposes
Serpentine . . .	Serpentine River, Western Australia	144,000	171	For Perth water supply
Cethana . . .	Mersey River, North Tasmania	143,000	360	Storage for Mersey Forth power development
Lake Brewster . . .	Lachlan River, near Hillston, New South Wales	123,900	..	Storage of rural water supplies for the lower Lachlan
Cairn Curran . . .	Loddon River, Victoria	120,600	144	For irrigation storage
Rowallan . . .	Mersey River, North Tasmania	110,000	140	Storage for Mersey Forth power development
Eungella . . .	Broken River, North Queensland	106,000	146	Provision of cooling water for Collinsville power station, supply to Collinsville town and for irrigation purposes

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued*

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
<b>DAMS AND RESERVOIRS UNDER CONSTRUCTION</b>				
Lakes Gordon and Pedder	South-west Tasmania:			
	Gordon River . . . . .	9,600,000	460	Storage for Gordon River power development

**Irrigation**

For some brief remarks on the history of irrigation in Australia see issues of the Year Book prior to No. 39. An article on the conservation and use of water in Australia appeared in Year Book No. 37, page 1096 and subsequent developments have been covered in later numbers of the Year Book.

**Irrigation research**

Comprehensive programs of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following: high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; soil treatments to improve the physical condition of irrigated heavy clay soils; the utilisation of irrigated pastures by stock; and growth problems affecting plants and trees and reduction of salinity in river systems.

The Commonwealth Scientific and Industrial Research Organization conducts research on irrigation and irrigated crops at a number of its research stations and laboratories. The Division of Irrigation Research at Griffith (New South Wales), is investigating ways of limiting the degradation of land by irrigation, improving the quality and range of irrigated crops, and assessing the amount of water required by irrigated crops and the most economical means of applying it. The crops being studied include citrus, cotton, rice, lucerne and vegetables. Design criteria for irrigation channel networks are being studied to help solve problems related to the transient flow in natural and artificial channel systems. The Division of Environmental Mechanics at Canberra (Australian Capital Territory) studies water movement in soils, evaporation from field crops, water movement in plants and the physics of water stress. Summer forage crops, winter legume crops and irrigated pastures are

being investigated by the Division of Plant Industry at Swan Coastal Plain (Western Australia). Salt tolerant rootstocks for grape vines and other problems of grapes and pome fruits are being evaluated at Merbein (Victoria) and Adelaide (South Australia) by the Division of Horticultural Research. The Division of Land Research conducts research on a number of irrigated crops, including rice, safflower, linseed and cotton at the Kimberley Research Station (Western Australia) and tobacco at Mareeba (Queensland). The Division has also carried out a number of hydrological investigations on the utilisation of underground water for irrigation and is studying infiltration characteristics of soils. The Division of Applied Geomechanics is studying the engineering aspects of water movement through earth embankments. The Division of Soils is studying the rate of recharge of aquifers in the south-east of South Australia and the effect that the type of plant cover (grassland or forest) has upon that rate. This Division is also looking at the effect that clearing has upon the salinity of water obtained from catchments in the south-west of Western Australia.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation areas and associated districts, and the Coleambally Irrigation Area. It is representative of the New South Wales Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales, the Water Conservation Service of New South Wales, the Rice Marketing Board of New South Wales, the Wine Grape Marketing Board of New South Wales, co-operative and secondary industries, and farmers' organisations. Finance is provided by these authorities on an agreed basis. The objectives are: to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organisation; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and to co-ordinate the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

Two other organisations with similar objectives are the Victorian Irrigation Research and Promotion Organisation which operates from Shepparton, and the Murray Research and Extension Committee centred at Deniliquin.

### Preservation of catchments

Since water conservation commences on the catchments it is becoming increasingly recognised that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimise the effects of floods, overstocking, bush fires, and the destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reafforestation and the preservation of catchments. In recent years efforts to counteract soil erosion have been intensified, and there is some evidence of a more unified approach to catchment, water, forestry, and land use, factors regarded as parts of a single problem.

### Sub-surface supplies

Much of Australia's underground water is obtained from artesian and sub-artesian basins and is used for stock purposes and domestic use. These supplies are indispensable in the dry areas which comprise most of the inland and extensive coastal areas as well. The quality of water ranges from usable to very saline.

Considerable use is also made of sub-surface water, other than pressure water, from localised groundwater basins, particularly in the well-settled areas. The water is used mainly for domestic and stock purposes. Compared with other countries with similar rainfall and climate, underground water is not used extensively for town and individual industrial supplies and irrigation, but its use for these purposes is increasing.

*Artesian and sub-artesian supplies.* Pressure water (either artesian or sub-artesian), variable in quantity and quality, is obtainable in many parts of Australia, from the various artesian basins extending over about half the continent.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 676,250 square miles, comprising about 421,000 in Queensland, 135,000 in South Australia, 81,250 in New South Wales and 39,000 in the Northern Territory. A table showing the principal defined water-bearing basins in Australia is shown on the following page.

More than 18,000 artesian bores have been drilled within the Great Artesian Basin, while the daily free discharge from all bores continuing to flow in Australia has been stated as exceeding 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but most is unsuitable for plant life; in certain areas sub-artesian waters are suitable for all uses. Some of these areas are in the Canning, Murray, Georgian and Barkly, Perth, Ord-Victoria, Pirie-Torrens and Adelaide Basins. In the Eucla Basin and parts of the Murray and Pirie-Torrens Basins the water is of poor quality, being barely suitable for stock.

In common with other countries possessing artesian supplies, Australia has been faced with the problem of flow diminution. It was recognised early that flows were diminishing as more bores were drilled, but it is now considered that while many of these bores will ultimately cease to flow, others will assume a perpetually steady rate of flow, corresponding with the average recharge from rainfall absorbed by permeable outcrops, mainly sandstone and limestone. Diminution in flows from artesian bores has emphasised the need to eliminate wastage as much as possible. Licences issued for the construction of new artesian bores prohibit the distribution of water through drains, channels, etc., as formerly, and the supplies must be confined to the borehead or piped to appropriate watering points.

#### PRINCIPAL WATER-BEARING BASINS IN AUSTRALIA

<i>Name</i>	<i>State</i>	<i>Geological age of chief aquifers</i>	<i>Approximate area</i>	<i>Depth to pressure water</i>
			square miles	feet
Great Artesian	Queensland, New South Wales, South Australia and Northern Territory	Mesozoic	676,250	Up to 7,000
Canning	Western Australia	Mesozoic-Palaeozoic	150,000	100 to 1,800
Murray	Victoria, New South Wales and South Australia	Miocene-Eocene	109,000	100 to 1,300
Georgian (including Barkly and Daly)	Northern Territory, Queensland	Cretaceous, Ordovician, Cambrian, and Upper Proterozoic	108,000	150 to 1,000
Eucla	Western Australia, South Australia	Pliocene-Miocene	74,000	300 to 2,000
Carnarvon	Western Australia	Cretaceous, Permian	45,000	200 to 4,000
Perth	Western Australia	Recent, Jurassic	21,000	200 to 2,500
Western District (Otway)	Victoria	Pleistocene-Upper Cretaceous	13,000	100 to 4,500
Basins of Ord-Victoria region	Northern Territory, Western Australia	Mainly Cambrian, and Permian	12,000	200 to 1,000
Pirie-Torrens	South Australia	Recent, Pleistocene	9,000	Up to 600
East Gippsland	Victoria	Pleistocene-Eocene	3,500	200 to 3,500
Adelaide	South Australia	Recent, Oligocene	1,100	200 to 600

*Shallow groundwater.* Shallow groundwater supplies are used in various parts of Australia for industry, irrigation, stock, and domestic purposes. Two examples of the use of these shallow supplies for industrial and domestic purposes occur in New South Wales. The Hunter District Water Board pumps up to 15 million gallons a day (average use over 30 years is 9.2 million gallons per day) for general use from the Tomago coastal sands near Newcastle, and at Botany, Sydney, private industry pumps 8-10 million gallons a day for its own use from similar sands. Exploration of the coastal sands north of the Tomago Sands has revealed a further potential production of 25 million gallons a day. Examples of the use of shallow groundwater supplies for irrigation include the Burdekin Delta and the Bundaberg area in Queensland. In the Burdekin Delta, which covers an area of some 200 square miles, the present extraction for irrigation from underground sources is in the region of 200,000 acre feet per annum (about 150 million gallons a day) and in the Bundaberg area it is approximately 50,000 acre feet per annum (about 37 million gallons a day).

Schemes for artificial recharge of underground supplies have been implemented on both sides of the Burdekin River delta. Diversions from unregulated river flows of 61,000 acre feet per annum to the north side and of 40,200 acre feet per annum (when available) to the south side have been authorised.

In recent years there has been a marked increase, particularly in Queensland, New South Wales and Victoria, in investigation into the groundwater resources of river and coastal alluvium for irrigation and town water supplies.

### National and interstate aspects

In terms of the Commonwealth Constitution primary responsibility for control and conservation of water rests with the individual State Governments. The Commonwealth Government is responsible for matters relating to water in its Territories. However, because political boundaries sometimes intersect river valleys and underground water basins, co-operation between Governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following paragraphs.

#### Australian Water Resources Council

The Australian Water Resources Council was established by joint action of the Commonwealth and State Governments in 1962. The council comprises Commonwealth and State Ministers primarily responsible for water resources, with the Commonwealth Minister for the Environment and Conservation as Chairman, and is serviced by a Standing Committee consisting mainly of the heads of Departments responsible to these Ministers, and by a number of technical committees, including one on water quality.

The primary objective of the Council is the provision of a comprehensive assessment on a continuing basis of Australia's water resources, and the extension of measurement and research to provide a sound basis for the planning of future development. In terms of its objectives and functions, the Council has dealt with a wide range of topics, making recommendations and stimulating action by appropriate bodies.

An accelerated water resources measure program involving many more new or improved gauging stations and groundwater investigations by Commonwealth and State Government authorities began in 1964-65. The Commonwealth Government approved extension of the program until 30 June 1973. In addition to its own commitments in the Territories, the Commonwealth is assisting the State Governments with their programs of water resources investigations. Since 1962-63, the total annual expenditure on this program by Australian Governments has increased more than three-fold.

The Commonwealth Government provided \$400,000 during the three years ended 30 June 1971 for the Water Research Fund administered by the Council which has approved eighteen projects in a new research program. This program, aimed at improving the efficiency of water management in Australia, complements research already undertaken by Commonwealth agencies, universities and other organisations. For the triennium to 1974 the Commonwealth Government allocated \$700,000.

Research results published or on open file, deal with a number of topics, for example:

Hydrology of small rural catchments in Australia, effects of land management on quantity and quality of available water, Australian desalination plants, streamflow measurement, evaporation studies, bore logging, and extraction of water in unconsolidated sediments.

The Council has given attention to the collation of available data on Australia's water resources. In 1965, a *Review of Australia's Water Resources (Stream Flow and Underground Resources)* 1963 was published, this being the first official assessment. A *Review of Australia's Water Resources (Monthly Rainfall and Evaporation)* by the Bureau of Meteorology was issued in 1969. Other council publications include a twice a year Newsletter, a Hydrological Series, a Technical Paper Series, an *Inventory of Water Resources Research in Australia* (published biannually), a Stream Gauging Information Catalogue (published five-yearly with annual supplements) and miscellaneous publications. Systematic publication of information is encouraged.

The Council continues to support Australian participation in the scientific program of the International Hydrological Decade (1965-74). An important contribution follows from the decision of the Council to establish ninety-three representative basins throughout Australia for detailed hydrological studies. The continuance and introduction of post-graduate study in hydrology is being encouraged at the universities. Under the auspices of the Council, a Groundwater School is held at about two-yearly intervals.

#### National Water Resources Development Program

In developing water resources, the Commonwealth Government's role in the past, while important, had been confined to assisting special projects or areas, e.g. the Snowy Mountains Scheme, participation in the River Murray Commission, and financial support for individual State projects such as the Ord River project. However, the National Water Resources Development Program, announced in November 1966, represents a very important move towards closer collaboration between State and Commonwealth Governments, and a more continuing and detailed involvement by the Commonwealth in the development of Australia's water resources.

Under the National Water Resources Development Program the Commonwealth has undertaken to provide grants to the States amounting to a total of about \$50,000,000 over five years for water conservation works aimed at reducing the hazards of droughts and expanding primary production. The grants under this program apply to the Emerald dam and irrigation project in Central Queensland (\$20,000,000); two Victorian schemes to reduce salinity levels in the Murray River (\$3,600,000); Taillem Bend-Keith pipeline, South Australia (\$6,000,000); Copeton dam on the Gwydir River, New South Wales (\$20,000,000); King River dam, Victoria (\$4,000,000); and the Cressy-Longford irrigation scheme, Tasmania (\$750,000). In October 1969 the Commonwealth undertook to provide a further sum of \$100,000,000 under this program. Further grants made are for major irrigation works in the Bundaberg region, Queensland (\$12,800,000), for flood mitigation works in New South Wales (\$9,000,000) and \$4,650,000 for assistance with construction of the Pike Creek Dam on the New South Wales-Queensland border rivers system. Commonwealth financial assistance to water resources measurements and investigations by the States is now included under this Program.

Proposals submitted by the States are examined by the Commonwealth to determine which are suitable, from a national point of view, for inclusion in the Program, and accordingly grants are announced from time to time.

### **Murray River scheme**

The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 408,000 square miles, or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and approximately one-fourteenth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Darling (1,700 miles), the Murrumbidgee (980 miles), and the Goulburn (350 miles). The average annual flow of each of the chief contributory streams is as follows: Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,820,000 acre feet; Darling River, 2,820,000 acre feet; Goulburn River (including Broken River), 2,580,000 acre feet; Murrumbidgee River, 2,050,000 acre feet; and Ovens River, 1,266,000 acre feet. Irrigated production in the Murray River Basin is mainly grapes for wine, dried fruits, fresh fruits, rice, vegetables, dairy produce, wool, and fat lambs.

*River Murray Waters Agreement.* For a brief summary of historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria and South Australia see issues of the Year Book prior to No. 39. Under the Agreement construction works are carried out by the States (which are also responsible for maintenance) subject to the approval and direction of the River Murray Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to maintain certain specified flows in the lower river varying from 47,000 acre feet a month in the winter months to 134,000 acre feet a month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation. For a brief outline of the operation of the Agreement prior to 1949 see Year Book No. 40, page 1065, and earlier issues.

At a conference of Ministers held in 1949 to consider the diversion of the Snowy River it was decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 440,000 acre feet per annum would be added to the Murray River (see Snowy Mountains Hydro-electric Scheme, page 855) and that increased storage should be provided in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and subsequently recommended to the contracting Governments that the River Murray Waters Agreement be amended to provide for enlargement of the Hume Reservoir by 500,000 acre feet to approximately 2,500,000 acre feet. A conference of Ministers in 1954 agreed to the enlargement, and it was also agreed that the Commission should be given power to construct regulators and to carry out such other work on the Murray River between Tocumwal and Echuca as it considered necessary to reduce the losses from the regulated flow in that stretch of the river. The amended Agreement was ratified in the Parliaments of the Commonwealth and the three States and was proclaimed on 7 April 1955. In view of the proposed diversions by the Snowy Mountains Authority to and from the Murray River, and for other reasons, amendments to those sections of the River Murray Waters Agreement dealing with the distribution of the waters of the Murray were considered desirable. Following ministerial conferences, amendments were ratified by the four Parliaments concerned, and came into force on 6 November 1958.

Further amendment of the Agreement to provide for the construction of a storage of approximately 5,000,000 acre feet capacity at Chowilla in South Australia was ratified by legislation in the Commonwealth and State Parliaments and came into force on 30 April 1964. However, in view of the greatly

increased costs by the time the project came to tender in 1967 and other significant factors (including water quality in the Lower Murray) which had arisen in the interim, the River Murray Commission resolved that, pending further investigations, construction of Chowilla Dam should be deferred. Further investigations then followed, including a re-assessment of the likely yield from both Chowilla and alternative storages on the Upper Murray and Mitta Mitta Rivers. Following careful consideration of this re-assessment, the River Murray Commission in February 1969 agreed that a 3,000,000 acre feet storage at Dartmouth on the Mitta Mitta River provided the greatest overall benefits in terms of cost and yield and should be the next development of the resources of the River Murray. The question of sharing the benefits could not be resolved by the Commission and was therefore referred to the respective Governments. Subsequently, Ministers representing the four Governments concerned met in March 1969 and agreed on conditions for the construction of the Dartmouth Project and for the sharing of the increased system yield between Victoria, New South Wales and South Australia. Among other things, the meeting of Ministers agreed to continue the Menindee Lakes Agreement in perpetuity.

The Commonwealth Government has offered to assist the three States with financing the project by way of a loan to the extent of 50 per cent of each State's contribution. At the same time the Commonwealth itself will make its own quarter contribution of the cost of the project.

The Acts ratifying the amendments to the River Murray Waters Agreement were proclaimed by the four contracting Governments on 30 March 1972, and work commenced on the construction of Dartmouth Dam on 1 April 1972.

Inflows to the Murray system during the 1971-72 year were about average. The spring of 1971 was again marked by floods, the first and smallest occurring at the end of August, the second towards the end of September and the third and largest flood early in November. During these floods Yarrawonga Pool was operated to achieve the maximum degree of flood mitigation possible. With high uncontrolled flows in the Murray and its tributaries, close regulation of flow was not achieved until early 1972. The combination of sustained surplus river flows until December, ample storage resources and dry conditions in the irrigation areas resulted in record quantities of water being diverted by New South Wales and Victoria from the Murray system. Of the total flow of the River Murray and its tributaries in 1971-72, 3,401,000 acre feet was diverted and impounded by the State of New South Wales and 2,541,000 acre feet by Victoria, while 401,000 acre feet was diverted by South Australia. During the year 5,197,000 acre feet was passed to South Australia compared with 9,032,000 acre feet in the previous year. The total diversion for irrigation, town water and other purposes from the River Murray itself by New South Wales was 1,750,000 acre feet and by Victoria 1,523,000 acre feet.

*River Murray Works.* Dartmouth Dam when completed in 1977 will store 3,000,000 acre feet of water and will be the largest reservoir in the River Murray system. It will complement Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, which has a storage of 2,480,000 acre feet and forms a lake 50,000 acres in area.

The Yarrawonga Diversion Weir, which was completed in 1939, raised the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan junction and the other below the Lachlan junction.

The Mulwala Canal, supplied from the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet a second, serving 1,800,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet a second, serving 300,000 acres. Not all of this area is irrigated.

Adjoining the river in New South Wales, and 35 miles from the Murray-Darling junction, Lake Victoria storage, with a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements. The inlet channel to Lake Victoria was enlarged in 1957 to permit greater diversion of periodical flood flows of short duration.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and have provided a number of storages on the tributaries, thereby contributing materially to the large amount of irrigation development in the Murray Basin. The main storages are: New South Wales—Menindee Lakes Storage (Darling), Blowering (Tumut), Burrinjuck (Murrumbidgee), Copeton (Gwydir), Keepit (Namoi), Burrendong

(Macquarie) and Wyangala (Lachlan); Victoria—Eildon (Goulburn), Waranga (Goulburn), Mokoan (Broken), Eppalock (Campaspe) and Cairn Curran (Loddon). Details of these, and other State works on Murray tributaries will be found in the sections dealing with State systems.

### New South Wales-Queensland Border Rivers Agreement

The catchments for the border streams of New South Wales and Queensland (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland), and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that from April to October it is necessary to supplement rainfall by irrigation to stabilise and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Other possible development of the area includes irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry.

The New South Wales-Queensland Border Rivers Agreement came into effect on 1 July 1947. The Agreement provided for the construction of certain works on those sections of the Severn, Dumaresq, MacIntyre, and Barwon Rivers, which constitute part of the boundary between New South Wales and Queensland for the furtherance of water conservation, water supply and irrigation in those States.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Border Rivers Commission to give a storage basin with a capacity as large as is reasonably practicable, and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision was also made for the construction of not more than four regulators in the effluents from the Border Rivers and for the taking over of the existing weirs on the MacIntyre and Barwon Rivers at Goondiwindi and Mungindi respectively. The cost of these works and of administration are to be borne by the States in equal shares. The Agreement further provided that the water discharge from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

After unfavourable foundation conditions were disclosed at several dam sites on the Dumaresq River, investigations were extended to tributary streams, and superficially suitable sites located on Pike Creek and the Mole River. A geophysical survey was made at each of these sites and preliminary comparative estimates were prepared to determine the relative economy of providing one large storage at Mingoola or two smaller storages on the tributaries. Following exploratory drilling of the tributary sites, a report dealing with alternative storage proposals and possible amendments to the existing Agreement was submitted to the participating States. Consequent upon these investigations an Amending Agreement was executed between the States of New South Wales and Queensland in November 1968, which included, *inter alia* provision for the construction of storages on Pike Creek (Queensland) and the Mole River (New South Wales). The new agreement also provided for investigation and construction of works for the improvement of flow and of the distribution of flow in streams which intersect the New South Wales-Queensland border west of Mungindi.

Works completed under the original agreement include Bonshaw, Cunningham and Glenarborn Weirs on the Dumaresq River, a weir and regulator on the Barwon River at the off-take of the Boomi River. Until a dam has been constructed it is unlikely that any other weirs will be required.

*Dam on Pike Creek.* In December 1970 following a request by the two States, the Commonwealth agreed to contribute one third of the cost of the dam on Pike Creek up to a maximum of \$4.65 million, dependent upon a check by the Snowy Mountains Engineering Corporation of the cost estimate. Pending the outcome of the check the two States authorised expenditure to enable the preparation of plans and specifications for the dam to continue. In May 1972 the Commonwealth advised the check of the estimates had been completed. The two States subsequently approved that the dam be constructed to provide a gross storage capacity of 212,000 acre feet, at an estimated cost of \$14 million and the time of its commencement be 1 July 1972. Preliminary works are now in hand and the major contract for construction of the dam is expected to be let late in 1973.

*Improvement of distribution of flow—Rivers crossing the border.* During 1971–72 the two States considered proposals for the better distribution of flows in the Balonne-Culgoa River System. The proposals provide for the construction of four regulating structures one in each stream immediately downstream of the four main bifurcations, namely, the Culgoa/Balonne Minor, the Balonne Minor/Donnegri Creek, the Ballandool/Bokhara and the Bokhara/Birrie bifurcations. The works, estimated to cost \$152,000, to be met equally by the two States, were commenced in November 1972 and scheduled for completion late in 1973.

### Snowy Mountains Hydro-electric Scheme

Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New

South Wales and Victoria in 1947 and 1948, and the submission by the Committee of reports in 1948 and 1949, the Commonwealth Parliament passed the *Snowy Mountains Hydro-electric Power Act* 1949 setting up an Authority to implement the proposals agreed upon.

The basis of the proposals was to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

The scheme involves two main diversions, that of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River, and that of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. In addition, works required to make use of the waters of the Upper Murrumbidgee, the Upper Tumut, the Upper Tooma and the Geehi Rivers for power generation also provide additional regulation of these streams, and this makes more water available for irrigation. Details of the two trans-mountain diversions and the associated power works together with details of progress and construction are given in Chapter 27, Electric Power Generation and Distribution.

The average total gain by diversion and regulation now that all storage works are completed is assessed at 1,120,000 acre feet per annum to the Murrumbidgee and 800,000 acre feet per annum to the Murray.

### International aspects

Australia maintains contact with international developments in water conservation and irrigation through its membership of the International Commission on Irrigation and Drainage since 1952. This Commission was set up in India in 1950 in order that the technical experience of all countries might be pooled for the benefit of all, and to promote the development and application of the science and technique of irrigation and drainage in the engineering, economic and social aspects. The Commission is constituted of National Committees of participating countries, and sixty-one countries, including Australia, have so far been admitted to membership.

The Central Office of the International Commission on Irrigation and Drainage is situated in New Delhi, India. Congresses, which are held every three years, have taken place in India, Algeria, the United States of America, Spain, Japan, in that order and again in India in 1966, in Mexico in April 1969, and Bulgaria in 1972.

An Australian National Committee was established following a meeting of representatives of Australian authorities held in Melbourne in 1953. At that meeting it was decided, *inter alia*, 'that a National Committee should be formed and that the National Committee would consist of representatives of Government Departments, Statutory Authorities, firms, and individuals actively interested in irrigation and drainage'. The Committee meets annually.

### STATES AND TERRITORIES

The foregoing text deals with water conservation and irrigation in Australia generally and with international, national and interstate aspects. The following survey covers the local pattern of water resources and the steps taken by the State Governments to bring about their development. In the various States, water policies tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria almost every form of water scheme is in operation, in New South Wales major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water (mainly underground sources) for stock, and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilise sugar production. Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest relates almost exclusively to hydro-electric generation. The Northern Territory is concerned primarily with stock supplies and the safeguarding of long stock routes.

### New South Wales

On page 1110 of Year Book No. 37 information is given on the pattern of rainfall and the history of irrigation in New South Wales. (See also the chapter Physical Geography and Climate of this issue.)

### Administration

The Water Conservation and Irrigation Commission of New South Wales consists of three members appointed by the Governor. The operations of the Commission cover water conservation, control of irrigation areas, the establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, assistance under the provisions of the farm water supplies scheme, and river improvement works.

Under the Water Act, 1912–1955 the right to the use and flow, and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Commission for the benefit of the Crown. A system of licences operates for the protection of private works of water conservation, irrigation, water supply, drainage and prevention of inundation.

For particulars of the New South Wales–Queensland Border Rivers Agreement ratified by Acts of both States in 1947, *see* page 855 of this chapter.

### Schemes summarised

The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam, Lake Cargelligo and Lake Brewster on the Lachlan (a tributary of the Murrumbidgee), by Glenbawn Dam on the Hunter River, by Keepit Dam on the Namoi River, by Burrendong Dam on the Macquarie River, and by the Menindee Lakes Storage on the Darling River. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc. in many places. Copeton Dam on the Gwydir River is in the course of construction. In addition, substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including irrigation areas, irrigation districts, water trust districts, flood control and irrigation districts, and river improvement districts. There are nine irrigation areas, although two of these, Yanco and Mirrool, are generally described under the one heading, namely, the Murrumbidgee Irrigation Areas. The Areas are: The Murrumbidgee Irrigation Areas, consisting of 451,263 acres served with water through a channel system stemming from the river at Berembded Weir; the Coomealla Irrigation Area of 34,626 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,388 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,850 acres, supplied with water pumped from the Murrumbidgee; the Tullakool Irrigation Area of 18,006 acres, supplied from the Edward River by diversion at Stevens Weir; the Buronga (8,739 acres) and Mallee Cliffs (1,900 acres) Irrigation Areas, served by pumping from the Murray; and the Coleambally Irrigation Area (234,637 acres), served by diversion from the Murrumbidgee River. All these Areas are administered by the Commission.

The capacities of the main storages for irrigation in New South Wales (in acre feet) are:

*Darling*—Menindee Lakes Storages (1,468,700);

*Murray*—Half share of Hume Reservoir, weirs and locks to Wentworth (1,351,420); Stevens Weir, Edward River (7,165);

*Tumut* (tributary of Murrumbidgee)—Blowering Dam (1,322,400);

*Macquarie*—Burrendong Dam (964,200 irrigation storage; 396,800 flood mitigation storage);

*Murrumbidgee*—Burrinjuck Dam (837,000); Redbank Weir (7,360); Maude Weir (6,740);

*Namoi*—Keepit Dam (345,300);

*Lachlan*—Wyangala Dam (987,000); Lake Brewster (123,900); Lake Cargelligo (29,430);

*Hunter*—Glenbawn Dam (185,300 acre feet irrigation storage; 107,900 acre feet flood mitigation storage);

*Belubula* (tributary of Lachlan River)—Carcoar Dam (30,000); and

*Snowy Mountains Hydro-electric Scheme*—Lake Eucumbene (3,890,000); Jindabyne Reservoir (558,000); Tantangara Dam (206,000).

The total length of supply channels, drains, escape channels and pipe lines constructed by the Water Conservation and Irrigation Commission in New South Wales is 5,227 miles. This comprises 3,564 miles of supply channels (including main canals), 1,594 miles of drains and escape channels, and 69 miles of pipe lines.

**Irrigated culture**

The following table shows details of the area of crops and pasture and the methods employed on land under irrigated culture during the 1971-72 season.

**AREA OF LAND UNDER IRRIGATED CULTURE: NEW SOUTH WALES, 1971-72**  
(Acres)

	<i>Method of irrigation</i>					<i>Total Area</i>
	<i>Spray</i>	<i>Furrow</i>	<i>Flood</i>	<i>Trickle</i>	<i>Multiple Methods</i>	
<b>Crops—</b>						
Cereals . . .	35,944	50,430	486,882	..	2,929	576,185
Cotton . . .	..	57,986	14,237	..	200	72,423
Fruit . . .	17,361	16,992	1,851	946	474	37,624
Linseed . . .	170	320	1,510	..	53	2,053
Safflower . . .	51	1,078	..	..	1,393	2,522
Sunflower . . .	1,467	6,497	21,926	..	330	30,220
Tobacco . . .	2,795	226	74	..	51	3,146
Vegetables . . .	27,673	7,879	1,567	52	222	37,393
Vineyards . . .	2,368	17,823	1,253	1,394	371	23,209
Other crops (a) . .	6,211	7,399	18,915	43	877	33,445
<b>Total crops . . .</b>	<b>94,040</b>	<b>166,630</b>	<b>548,215</b>	<b>2,435</b>	<b>6,900</b>	<b>818,220</b>

Pastures . . .	122,509	8,175	817,373	..	4,506	952,563

(a) Includes fodder crops.

**Irrigation areas**

*Murrumbidgee.* This area, which consists of Yanco and Mirrool Irrigation Area, together with adjacent lands supplied under agreement, received 396,340 acre feet, nearly 12 per cent of the total water (3,297,956 acre feet) used within the State for stock, domestic and irrigation purposes. The area is served by the Burrinjuck Dam on the Murrumbidgee River and Blowering Dam on the Tumut River, which joins the Murrumbidgee River near Gundagai. The catchment of the Burrinjuck Dam is about 5,000 square miles and water storage in Blowering Dam is from the natural flow of the Tumut River and water released into that river from the Snowy-Tumut Development Section of the Snowy Mountains Hydro-electric Scheme. This includes water from the Eucumbene, Upper Murrumbidgee, Tooma and Upper Tumut Rivers. The dams also provide town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied to the Irrigation Districts of Tabbita, Benerembah and Wah Wah, and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district, and water is not released from the dams for that purpose. For other areas and districts, however, water is stored during the winter, fed by melting snows and spring freshets, and is released during the September-May irrigation season. To supply the Yanco and Mirrool Areas, water is diverted by Berembeld Weir, into the main canal which has an off-take capacity of 1,600 cubic feet a second. The main canal has been completed to beyond Griffith, a distance of approximately 96 miles. These areas are served by approximately 797 miles of supply channels and pipes and 880 miles of drainage channels. In addition, approximately 444 miles of supply channel run through the Tabbita, Benerembah and Wah Wah Districts which are adjacent to the Areas.

The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas only, and has no jurisdiction over land transactions in the adjacent irrigation districts, although it is responsible for the operation and maintenance of the water supply in these areas. Other local government services, including electricity and town water supply, are provided by Councils. Land is disposed of by the Commission by purchase or under perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30 June 1972 was 408,226 acres including 29,348 acres held for short lease grazing, agriculture, etc.

The land on which the Murrumbidgee Irrigation Areas and associated districts are situated originally comprised large sheep stations and was sparsely populated, but at 30 June 1972 its population was approximately 33,825, that of Leeton Shire being 11,500 and that of Wade Shire 21,500. The principal products of the Murrumbidgee Irrigation Areas are wool, livestock for slaughtering, rice, citrus fruits, peaches and nectarines, grapes, tomatoes, peas, beans, and root vegetables. Rice growing was initiated on the Areas in 1924 and has since become the most important crop. In a normal season, the water supplied for rice represents about half the total delivered to the Areas.

*Other Irrigation Areas.* The Coomealla, Tullakool, Buronga, Mallee Cliffs, Hay, Curlwaa, and Coleambally Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which is responsible also for the operation and maintenance of works to supply water.

### Irrigation districts

These districts are set up under the Water Act, 1912–1955 for (a) domestic and stock water supply and (b) irrigation. The essential difference between an 'Area' and a 'District' is that in the case of the former, all the land to be included in the area is acquired by the Crown and then subdivided into such number of separate holdings as may be determined. Within the District, however, existing ownership of land is not disturbed other than to acquire land required for water distribution works.

Since the completion of the Hume Reservoir, several such districts have been established along the Murray to utilise the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on 'extensive' irrigation, that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. 'Water right' means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin, Deniboota and Denimein Districts is diverted from the River Murray at Yarrowonga into the Mulwala Canal. Water for the Wakool Irrigation District and the Tullakool Irrigation Area is diverted from the Edward River at Stevens Weir, and a supplementary supply is also obtainable from Mulwala Canal. The total length of completed canals and channels in Berriquin District is 1,045 miles, comprising Mulwala canal 75 miles, Berrigan channel 22 miles, subsidiary channels 824 miles, escape channels 114 miles, and cross drainage channels 10 miles. Off-take capacity of the Mulwala canal is 5,000 acre feet a day. Wakool, with 430 miles of channels, contains 322 holdings, and the area developed by irrigation includes about one acre in six of the total area. Sheep raising and rice growing are the main industries. Considerable subdivision has occurred within the Berriquin District, and the proportion of the total area developed for irrigation is higher than in the case of Wakool. Sheep (including fat lambs), dairying, wheat, and rice growing are the main industries.

### Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts

The Water Act, 1912–1966 provides for the constitution of Trust Districts for domestic and stock water and irrigation, and empowers the Commission to construct, acquire or utilise necessary works. When the works are completed, they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following are the water trusts, other than irrigation, as at present constituted (the area in acres of each district being shown in parenthesis): *Murray River*—Little Murrumbidgee Creek (157,440), Bullatale Creek (68,320), Poon Boon (34,300), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River*—Yanco, Colombo and Billabong Creeks (1,007,780); *Lachlan River*—Marrowie Creek (292,640), Torrigan, Muggabah and Merrimajack Creeks (170,240); *Micabil Weir* (11,500), Condobolin West Weir (4,480); *Miscellaneous*—Great Anabranch of Darling River (959,184), Nidgerie Weir (46,880) and Algdudgerie Creek (9,670)—making in all a total area of 2,764,714 acres. Eleven of these trusts have been formed for the provision of water for domestic and stock purposes and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way. There are seven of these trusts.

The Lowbidgee Provisional Flood Control and Irrigation District, the first of its kind, was constituted in 1945. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. Another district, Medgun, near Moree in the north-west, is also in operation.

### River, lake and farm water supplies

During recent years the number of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognised as a means of stabilising production in dry months. There has also been a considerable increase along the Murrumbidgee, Lachlan, Namoi, and Macquarie Rivers.

Under the Farm Water Supplies Act, 1946, technical advice and assistance, and also financial assistance, are made available to help individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams, and flood and spray irrigation systems.

### Underground water

For information on underground water resources in New South Wales see Year Book No. 55 and earlier issues.

### Future program

The program of development in hand includes the provision of additional dams and storages, weirs, and flood mitigation and river protection works in various parts of the State. Work is continuing at Copeton Dam site on the Gwydir River. Legislation has been passed authorising the construction of Windamere Dam on the Cudgegong River, a dam on the Brogo River and existing legislation authorises the construction of a flood control and irrigation dam at Warkworth in the Hunter Valley. The Hunter River development, of which Glenbawn Dam is an integral part, incorporates an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. The strengthening and enlargement of Wyangala Dam, on the Lachlan River, has been completed and storage capacity has been increased to 987,139 acre feet following installation of radial gates in the spillway. Within the new Coleambally Irrigation Area further development of farms has been carried out and water is being supplied by the Coleambally Canal which off-takes from the Murrumbidgee River at Gogeldrie Weir. At 30 June 1972, 313 large area farms and 22 horticultural farms were occupied.

## Victoria

Particulars of the rainfall pattern of Victoria were given on page 1117 of Year Book No. 37. (See also the chapter Physical Geography and Climate of this issue.)

### Administration

Victorian Governments have been active in the development of country water supplies since the 1860's when major works to supply the Bendigo goldfields were undertaken. Local trusts to construct and operate waterworks under Government supervision were provided for in the *Water Conservation Act* 1881. Development under the trust system was greatly stimulated by the *Irrigation Act* 1886, which provided for the construction of national headworks by the State, and vested in the Crown the right to the use and control of all surface waters. By 1900 there were 33 irrigation trusts and 18 other rural water supply trusts, but the system of local control was then breaking down under financial difficulties.

The *Water Act* 1905 established the State Rivers and Water Supply Commission to take over the Irrigation Trust districts (except the still-existing First Mildura Irrigation Trust) and to exercise the State's functions in the further control and development of surface waters outside the metropolis. The Commission now supervises all private diversions from streams and directly administers irrigation districts covering 2,259,280 acres, rural waterworks and urban districts covering 12,120,000 acres, flood protection districts covering 148,850 acres, and urban water supplies serving 312,600 people. It also supervises the activities of local urban water supply authorities supplying 798,700 people in 274 towns, as well as 111 local sewerage authorities and 31 river improvement and drainage authorities.

### Works summarised

Since the State Rivers and Water Supply Commission began its operations in 1906 the capacity of storages under its control has been increased from 172,000 acre feet to 5,015,920 acre feet. In addition, Victoria has in effect a half share in River Murray Commission storages totalling 2,703,150 acre feet, bringing total capacity available to Victoria at 30 June 1972, to 6,367,490 acre feet. Most

of the water used from these storages is for irrigation. The area irrigated in 1971-72 totalled 1,472,591 acres (compared with 105,000 acres in 1906). Irrigation deliveries in 1971-72 totalled 2,566,832 acre feet. The value of irrigation production in 1970-71 was estimated at \$194,600,000. Of the total irrigation production about one-quarter was from lands irrigated by 'private diverters', i.e. irrigators who are authorised to take water from streams, lakes, etc., but who do not come within the boundaries of an irrigation district.

### Storages

Capacities of principal storages (in acre feet) and system totals at 30 June 1972 were as follows:

*Goulburn System*—Eildon, 2,750,000; Waranga, 333,400; total, 3,133,150;

*Murray System*—half share of Murray storages, 1,351,570; total, 1,392,430;

*Broken River System*—Nillahcootie, 32,260; Mokoan, 300,000; total, 332,260;

*Ovens System*—Lake Buffalo, 19,500; Lake William Hovell, 10,000; total, 29,500;

*Loddon System*—Cairn Curran, 120,600; Tullaroop, 60,000; Laanecoorie, 6,300; total, 186,900;

*Campaspe-Coliban System*—Eppalock, 252,860; Coliban storages, 64,930; total, 317,790;

*Wimmera-Mallee Systems*—Rocklands, 272,000; Toolondo, 86,000; Bellfield, 63,680; total, 627,890;

*Maffra-Sale System*—Glenmaggie, 154,300; total, 154,340;

*Werribee-Bacchus Marsh*—total, 48,300;

*Mornington Peninsula*—total, 47,640.

### Irrigated culture

The following table shows details of the area of crops and pasture and the methods employed on land under irrigated culture during the 1971-72 season.

AREA OF LAND UNDER IRRIGATED CULTURE: VICTORIA, 1971-72  
(Acres)

	Method of irrigation					Total area
	Spray	Furrow	Flood	Trickle	Multiple methods	
Crops—						
Cereals . . .	2,221	840	35,737	21	24	38,843
Fruit . . .	14,610	10,620	17,979	3,964	1,862	49,035
Vegetables . . .	33,313	6,823	2,361	54	214	42,765
Vineyards . . .	5,829	37,464	2,642	204	196	46,335
Other crops(a) . . .	12,518	441	8,604	27	603	22,193
Total crops . . .	68,491	56,188	67,323	4,270	2,899	199,171
Lucerne . . .	14,979	66	42,345	20	291	57,701
Pastures . . .	51,638	25	1,175,989	14	8,390	1,236,076

(a) Includes fodder crops.

### Irrigation systems

*Goulburn-Campaspe-Loddon.* The principal storage for Goulburn waters is Lake Eildon, which was completed in 1956, submerging the original 306,000 acre feet Eildon storage completed in 1927. For the distribution of additional supplies available from Eildon and from other new storages on the Loddon and Campaspe rivers it has been necessary to undertake major enlargements in the distribution system by a long-term program of channel works which is still in progress. Deliveries during 1971-72 amounted to 1,089,495 acre feet, compared with 395,000 acre feet in 1954-55. Goulburn River water is diverted to the irrigation areas by gravitation from the pool formed by the Goulburn Weir, near Nagambie, completed in 1890 as a State work. The East Goulburn main channel of 1,000 cusecs capacity supplies the areas around Shepparton. Two 1,500 cusec channels to the west convey water to the off-river Waranga Reservoir and supply part of the Rodney area through

off-takes on the way. From Waranga Reservoir there are two main outlets, one supplying the western part of the Rodney area and the other, of 1,200 cusecs capacity, supplying the Waranga Western Main Channel, which runs 230 channel miles west across the Campaspe and Loddon Valleys to beyond Birchip.

Flows in the Waranga Western Main Channel are augmented by the injection of Campaspe water through a pumping station of 200 cusecs capacity near Rochester. Supply to the Tragowel and Boort areas is augmented by gravitational diversion of Loddon water.

The gross area of holdings in the Goulburn-Campaspe-Loddon systems is 1,333,888 acres. The main products are dairy produce, fruit, wool, and fat lambs. Annual production of deciduous canning fruits in the eastern part of the system is about two-thirds of Australia's total.

*Murray River system.* Water is diverted from the Murray by gravity at the Yarrawonga Weir for the Murray Valley Irrigation Area and at the Torrumbarry Weir for the Torrumbarry irrigation system which extends to Swan Hill. Holdings in the Murray Valley area total 301,423 acres, devoted mainly to dairying, fat lambs and canning fruit. Holdings in the Torrumbarry system total 396,825 acres, devoted mainly to dairying and the production of fat lambs, with a concentration of vineyards, orchards and market gardens around Swan Hill.

Downstream from Swan Hill there are 5 districts supplied by pumping: the district of the First Mildura Irrigation Trust and the 4 Commission districts of Nyah, Robinvale, Red Cliffs and Merbein. These districts together serve 80,577 acres, producing mainly dried vine fruits, with some citrus fruits and table and wine grapes.

*Southern systems.* The Maffra-Sale-Central Gippsland district, covering 130,460 acres around Maffra and Sale, is supplied from the Macalister River, regulated by Lake Glenmaggie, and from the unregulated flow of the Thomson River. Dairy Farming is the principal activity. The Bacchus Marsh and Werribee District, supplied from storages in the Werribee River only 20 miles west of Melbourne, cover 16,107 acres intensively developed for dairying and vegetables.

#### **Wimmera-Mallee domestic and stock supply system**

Storages in the Grampians in south-west Victoria ensure farm water supplies over an area of 11,000 square miles extending northward through riverless pastoral and cereal lands to the Murray. Farm dams throughout this region, which covers one-eighth of the total area of the State, are filled once each year, in the winter-spring season, through the medium of 6,600 miles of Commission channels and about 4,000 miles of private channels. Without this supply, occupation of the region would be extremely hazardous. Storage capacity has now been increased from 564,210 acre feet to 627,890 acre feet by construction of Lake Bellfield. Fifty towns, with a population of 46,000, receive their supply from the same system. Near Horsham and Murtoa, close to headworks in the south, a supply is maintained for the irrigation of an area of 7,500 acres, mainly for dairying.

#### **Drainage, flood protection and river improvement**

The largest work in this category undertaken by the State Rivers and Water Supply Commission is the Koo-wee-rup-Cardinia flood protection district embracing 89,245 acres of a continuous depression along the seaboard of Westernport. Once useless, indeed a hindrance to communication, this area now yields primary products worth several million dollars each year.

By the *River Improvement Act* 1948, the formation of local river improvement and drainage trusts under the supervision of the Commission has been greatly facilitated and since 1950, 31 such trusts have been formed (including the Dandenong Valley Authority). The importance of river improvement work is expected to continue to grow.

The Dandenong Valley Authority was created in 1963 by special legislation, with jurisdiction over the whole catchment of the Dandenong Creek (300 square miles) for purposes of arterial drainage, river improvement and flood protection. In June 1966 the Authority took over the Commission's Carrum Drainage District.

#### **Finance**

The net capital liability of the Commission at 30 June 1972 for works under its direct control was \$343.1 million. Eighty-six per cent of the cost of capital and interest repayments was borne by the State. Total expenditure on irrigation was \$185.6 million; \$32.7 million on rural, domestic and stock supplies; \$58.5 million on urban supplies and \$2.6 million on flood protection. A further \$25.9 million (relating mainly to irrigation) was expended on headworks but has not yet been allocated to the above. The remaining \$37.7 million was for expenditure on storages for private diversion and to supplement supplies to local authorities, and for items such as loan flotation expenses, miscellaneous surveys and investigations, and buildings, plant and stores.

### Future program

In July 1963 the Government announced plans for a long-term storage program for irrigation purposes to cost a total of \$75 million between 1963-64 and 1973-74. This included the projected Chowilla Reservoir, which will not now be constructed, and the Lake Buffalo project, which has been deferred following the decision to construct Dartmouth.

Since the long-term storage program came into operation, storages have been completed for the Wimmera-Mallee System (Lake Bellfield, near Horsham); the Mornington Peninsula System (Devilbend Reservoir and Tarago Reservoir); private diversers near Benalla (Lake Nillahcootie); on the Buffalo River (first stage of Lake Buffalo); the Goulburn-Murray System (Lake Mokoan near Benalla, Corop Lakes); and irrigators in the King River Valley (Lake William Hovell on the King River).

Construction of an access road to the Dartmouth Dam site and preparation of the site area commenced during the 1972 winter. It is planned that the project, including a hydro-electric power station with associated pondage area, will be completed late in 1978.

Construction of the Rosslynne Reservoir (20,000 acre feet), near Gisborne, is well advanced with May 1973 set as the target date for the commencement of filling. The reservoir will provide domestic water supplies for the Sunbury area and will regulate down-river releases to existing users.

Field investigations into the reduction of salt in the Lake Victoria and Chowilla areas, by means of control works proposed for the Murray River, are being undertaken jointly with the States of New South Wales and South Australia.

Details of a storage on the Mitta Mitta River at Dartmouth in North-Eastern Victoria appear on page 849.

## Queensland

Particulars of the rainfall pattern of Queensland are given in Year Book No. 37, page 1122. (*See also* the chapter Physical Geography and Climate of this issue.)

### Introduction

The important primary industries of Queensland are subject to relatively frequent and serious losses by drought and also to extensive flooding. There is therefore a definite and widespread need for the provision of works for water conservation for irrigation, stock watering and for flood mitigation.

The average annual flow of all streams in Queensland of 108 million acre feet, equivalent to 39.2 per cent of that for all Australian streams, gives ample scope for such works.

### Water resources investigation

The Commissioner of Irrigation and Water Supply is required, under the *Land and Water Resources Development Acts* 1943 to 1946, to (a) prepare a complete description of the natural water resources of the State, both surface and underground, (b) undertake and carry out a survey of such resources, and (c) keep a record of all such natural water resources, surface and underground. For this purpose the Commission has installed and operates 524 stream gauging stations (448 of them being equipped with automatic water level recorders) and collects rainfall data from 187 stations in addition to Commonwealth Bureau of Meteorology stations.

### Licensing and control

As required under the Water Act, rights to underground and surface water are allocated and use controlled by a system of licensing of—(a) all artesian bores in the State; (b) all sub-artesian bores in areas proclaimed by the Governor in Council; the main purpose of proclaiming areas is to ensure the equitable distribution of available supplies and to obtain information on the quantity, quality, extent and use of those supplies. (c) all conservation and use (other than for stock and domestic supplies) of flow in watercourses.

The Commission is required to control use to share supplies as equitably as possible in periods of shortage of supply. At 30th June, 1972, 13,412 waterworks licences were in existence, 10,142 being for pumps and 2,596 for dams and weirs and 674 for other works. Areas of sub-artesian water supply proclaimed in which all bores and wells require a license total 544,400 square miles. A total of 26,757 bores (artesian and sub-artesian in proclaimed areas) were registered at 30th June, 1972.

### Development of water resources

The Commissioner of Irrigation and Water Supply is required to prepare a co-ordinated program of work for the conservation, utilisation and distribution of water resources, and to make recommendations to the Government regarding the carrying out of works in this program.

The Commissioner is principally responsible for water conservation and supply works for rural purposes, including irrigation, stock and domestic supply. However, in planning such works, particularly storages, economies to all users can accrue by providing where possible for dual or multi-purpose use of works for irrigation, rural, urban and industrial including power generation and mining purposes. As a result of this approach, 14 cities and towns now draw supplies from Commission storages or by diversion from regulated streams, four storages provide supply for power generation at three thermal stations (Swanbank, Calcap and Collinsville) and one hydro-electric station (Barron Falls), supply for mining operations is drawn from three other storages, and stock water supplies are or will be provided from two Commission and two private pipeline systems serving power stations or mining operations. Urgent water requirements of the expanding mining activities in Central, North and North West Queensland have brought out the need to further ensure the orderly and efficient development of the limited water resources in these areas, to provide for immediate and future needs for both urban, mineral and rural purposes.

### Water conservation

At 30 June 1972, the Irrigation and Water Supply Commission controlled and operated 11 dams (2 approaching completion) and 50 weirs with a total available storage capacity of 2,135,027 acre feet. Two dams (Tinaroo Falls and Eungella) are located in North Queensland; two (Fairbairn and Callide) in Central Queensland; the other seven (Moogerah, Leslie, Borumba, Coolmunda, Wuruma, Atkinson and Beardmore) in South Queensland. Of the weirs 28 are in South, 11 in Central and 11 in North Queensland. Weir capacity ranges from 14,000 to less than 50 acre feet; 13 of them having a capacity each of over 1,000 acre feet. Completion of Beardmore, Maroon and Monduran Dams, Kolan Barrage and Chinchilla Weir now under construction will provide additional storage of 585,000 acre feet.

### Irrigated culture and sources of supply

The total area under agriculture in Queensland in 1971-72 was 5.0 million acres. Of this area some 453,562 acres were irrigated. In 1971-72 crops or pastures were irrigated on 9,907 holdings or 22.9 per cent of all rural holdings in the State. The area of crops (excluding lucerne and sown and native pastures) irrigated was 348,059 acres, or 6.8 per cent of the total area under crop. In addition there were 47,864 acres of lucerne irrigated and 57,639 acres of other sown and native pastures. The average area irrigated per holding using irrigation was 46 acres.

Unlike other States, the greater part of the area irrigated is by individual private pumping plants drawing supply from streams or underground sources, spread widely throughout the State, rather than in constituted irrigation areas where supply is provided by channel systems delivering water to farms.

The following table shows details of the sources of supply for the area of land under irrigated culture during 1971-72.

AREA OF LAND UNDER IRRIGATED CULTURE AND SOURCES OF SUPPLY: QUEENSLAND, 1971-72

Source of supply	Area irrigated		Percentage of total area irrigated	
	acres	acres	%	%
Underground supplies—				
Naturally replenished . . . }	..	260,464	..	57.4
Artificially replenished . . . }				
Surface supplies—				
Irrigation areas . . . }	53,603		11.8	
Regulated streams . . . }	107,684		23.7	
Unregulated streams . . . }				
Farm dams . . .	31,008	192,295	6.8	42.4
Town water supplies . . .		803		0.2
<b>Total all sources . . .</b>		<b>453,562</b>		<b>100.0</b>

Because of the predominance of irrigation by private diversion pumping, most of the storages are used to release water downstream to maintain supplies for such diversion.

The following table shows details of the area of crops and pastures irrigated and the methods employed on land under irrigated culture during the 1971-72 season.

AREA OF LAND UNDER IRRIGATED CULTURE: QUEENSLAND, 1971-72  
(Acres)

	<i>Method of irrigation</i>					<i>Total area</i>
	<i>Spray</i>	<i>Furrow</i>	<i>Flood</i>	<i>Trickle</i>	<i>Multiple methods</i>	
Crops—						
Cereals . . .	38,328	32,696	23,757	..	114	94,895
Cotton . . .	643	11,936	920	..	130	13,629
Fruit . . .	9,363	248	173	986	434	11,204
Sugar . . .	54,577	68,255	15,189	..	6,262	144,283
Tobacco . . .	11,010	282	246	..	174	11,712
Vegetables . .	43,936	3,594	374	540	256	48,700
Other crops(a) .	8,362	11,135	3,786	73	280	23,636
<b>Total crops .</b>	<b>166,219</b>	<b>128,146</b>	<b>44,445</b>	<b>1,599</b>	<b>7,650</b>	<b>348,059</b>
Lucerne . . .	46,607	533	693	..	31	47,864
Pastures . . .	40,305	318	16,402	..	614	57,639

(a) Includes fodder crops.

### Irrigation areas

About 8 per cent of the area under irrigation in the State is concentrated in the four established Irrigation Areas constituted under the *Irrigation Acts*, 1922 to 1965, where the supply is generally reticulated by channel systems, by means of gravity or by pumping, from the storage. In addition some supply is also provided from streams regulated by the storage. Details of Irrigation Areas established and two under construction are set out below.

**Dawson Valley Irrigation Area.** The scheme is situated around the town of Theodore and the area is supplied by four weirs (with a capacity of 24,280 acre feet) on the Dawson River. Pumping stations deliver water through channel systems to 61 farms. Cotton and grain crops account for the major part of production from irrigated farms. In addition to irrigation demand the towns of Theodore and Moura and the Theiss Peabody Mitsui Mining Group obtain supplies from the storages.

**Burdekin River Irrigation Area and Water Supply Scheme.** This scheme is a complex system of water conservation, irrigation, industrial, urban and stock water supply. Storages are Eungella Dam on the Broken River, and Gorge and Blue Valley Weirs on the Burdekin River. From Eungella Dam, water is diverted directly by a privately owned 75 mile piped supply system to coal mining operations at Goonyella and Peak Downs and the town of Moranbah. Supplies for other purposes are maintained along the Bowen and lower 71 miles of the Burdekin River by release of water from the storages as required. These purposes and the arrangements for supply comprise (i) a pumping station on the Bowen River delivering supply through 21 miles of pipeline to the Collinsville Power Station, Collinsville Town and nine grazing holdings along the pipe line. (ii) Six pumping stations delivering water through channel systems to 152 individual irrigated holdings in Clare, Millaroo and Dalbeg sections of the Burdekin River Irrigation Area. Principal production crops from irrigated farms are sugar cane, rice and seed crops. (iii) private diversion by pumping for irrigation on individual holdings along the Bowen and Lower Burdekin Rivers.

**Mareeba-Dimbulah Irrigation Area.** This area is supplied by Tinaroo Falls Dam and weirs on the Barron and Walsh River systems. Water is delivered through channel systems and regulated streams to 562 farms on which the principal crop is tobacco. In addition, water is supplied to the towns of Mareeba, Dimbulah, Walkamin, Mutchilba and Tinaroo Falls and to the Hydro-electric Generating Station at Barron Falls.

**St George Irrigation Area.** This area is located near the town of St George and the principal storages for this area are Beardmore Dam (nearing completion) and Taylor Weir on the Balonne River and two weirs on Thuraggi Watercourse. Water is supplied to 20 farms on which the principal

crops are cotton and cereals and to the town of St George. The construction of works to extend the area by some 16 farms is in progress.

**Emerald Irrigation Area.** This scheme, a joint Commonwealth and State undertaking now under construction involves the construction of Fairbairn Dam (nearing completion) on the Nogoa River, some 12 miles upstream from Emerald. Water from this dam and associated irrigation, drainage and roadworks could ultimately serve 80 irrigation farms on which 32,000 acres could be irrigated annually. In addition, supplies will be provided for coal mining and urban water supply in the Blackwater area.

**Bundaberg Irrigation Scheme.** This is a joint Commonwealth and State undertaking, estimated to cost \$51.84 million aimed at raising the efficiency and security of the established sugar industry in the region. Phase 1 of the Scheme now under construction involves the construction of Monduran Dam (capacity 475,000 acre feet) on the Kolan River, tidal barrages on the Kolan and Burnett Rivers, pumping stations and distribution works. The scheme will ultimately provide an assured water supply to 1,485 assignments with a gross area of 119,830 acres and 5,000 acre feet annually to augment supplies to the city of Bundaberg.

### Irrigation projects

These are schemes established under the *Water Act* 1926 to 1968 where water from storage is released downstream to maintain adequate supplies for private pumping under licence, to land adjacent to the watercourse. Details of existing Irrigation Projects are set out in the following table.

IRRIGATION PROJECTS: QUEENSLAND

Project	Storage	Number of licensed pumps	Annual water allocation (acre ft.)	Water supplied 1971-72	
				Irrigation (acre ft.)	Other purposes (acre ft.)
Warrill Valley . .	Moogerah Dam . .	293	8,191	6,787	8,797
Mary Valley . .	Borumba Dam . .	147	4,358	2,821	1,662
Upper Condamine . .	Leslie Dam . .	69	11,660	8,414	483
Macintyre Brook . .	Coolmunda Dam . .	90	3,511	2,531	153
Upper Burnett . .	Wuruma Dam . .	251	21,124	19,001	511
Lower Lockyer . .	Atkinson Dam . .	141	6,038	2,955	..

Other projects currently under construction or approved are set out below.

**Logan River Project.** Maroon Dam, under construction on Burnett Creek, a tributary of the Logan River, is designed to permit expansion of irrigation from the present 3,475 acres to 9,900 acres along Burnett Creek and the Logan River for about 80 miles.

**Border Rivers Project.** The Dumaresq-Barwon Border Rivers Commission consisting of representatives of New South Wales and Queensland was created to control works on these rivers where they form the boundary between the two States, and to allocate the water. (For details see page 855).

**Leichhardt River Project.** This scheme, which involves the construction of Julius Dam on the Leichhardt River and a supply system to convey the water to the Mount Isa area is designed to provide water for the rapidly expanding needs of Mount Isa City and Mount Isa Mines Ltd and to maintain a reserve supply for possible other users in the foreseeable future. Construction of the dam commenced during 1972-73.

**Blackwater Water Supply.** Construction of a supply system with a capacity of 3,700 acre feet per annum from Bedford Weir to Blackwater and a capacity of 1,800 acre feet from Blackwater to Leichhardt Mine has been approved and will be completed in 1973. Initially to supply the Leichhardt Colliery and Town of Blackwater, the works are estimated to cost \$2.3 million.

### Rural, stock and domestic supplies

**Rural Water Supply Areas.** Improvements to stock and domestic water supplies are assisted by the development of Rural Water Supply Schemes, where water from a central source is distributed through pipelines to individual farms and properties. Investigation and design of these schemes are carried out by the Irrigation and Water Supply Commission. The schemes attract a Government subsidy of 50 per cent of the capital cost, the balance being provided by way of Government guaranteed loans raised by the individual water boards. Operation and maintenance costs and capital charges are wholly met by rates levied on benefited properties. Fourteen schemes are in operation with a total benefited area of 274,120 acres on 589 rural holdings.

**Bore Water Supply Areas.** Bore Water Supply Areas are constituted under the Water Act for the purpose of supplying water from artesian or sub-artesian bores to groups of adjoining properties for the watering of stock. The construction or acquisition of a bore and distribution system within an Area is financed by a Treasury loan, and rates calculated on the basis of area benefited are levied annually to meet loan repayments and maintenance and operating costs. Of the 60 Bore Water Supply Areas currently operating in the State, 54 are administered by the Commission and six by local boards elected by the ratepayers within the areas. A total daily flow of 23,398,000 gallons was distributed through some 2,374 miles of drains to serve a benefited area of 4,613,253 acres on 397 holdings.

#### **River improvement trusts**

These trusts are virtually autonomous bodies whose responsibility is to carry out and maintain works to improve stream channels, to increase their flood carrying capacity, to prevent or repair bank erosion and to mitigate flooding. Thirteen trusts are constituted throughout the State.

#### **Drainage areas**

Eight Drainage Areas—five in irrigation areas and three administered by autonomous drainage boards—have been constituted. These Areas served 296 holdings by 163 miles of drain; a total area of 61,337 acres being drained.

#### **Underground water supplies**

The availability of underground water in Queensland has played a very big part in the development of the pastoral industry, and of irrigation on individual farms, particularly along the coastal fringe. Underground water is also used very widely for irrigation, stock, and domestic purposes outside the Artesian Basin. Over half the area irrigated in Queensland receives its supplies from underground sources, and in accordance with the requirements of *The Land and Water Resources Development Acts*, 1943 to 1946, the investigation of availability of underground water is being pursued by geological mapping, investigation drilling and hydro-geological assessment. The most important areas where water from this source is used for irrigation are in the following river basins; the Lower Burdekin, the Don (Bowen), the Pioneer, the Callide Valley, the Lower Burnett, many parts of the Brisbane Basin, including the Lockyer, and parts of the Upper Condamine Basin.

**Burdekin Delta recharge.** For the first time in Australia, the artificial replenishment of underground water supplies has been implemented in the Burdekin Delta. The North and South Burdekin Water Boards divert unregulated supplies of water from the Burdekin River for the purpose of artificially recharging the underground supplies from which some 70,000 acres of sugar cane are irrigated and supplies for stock and domestic purposes, including the towns of Ayr and Home Hill are drawn.

**Artesian water.** The Great Artesian Basin in Queensland consists approximately of the area lying west of the Great Dividing Range, excluding the Cloncurry Mineral Field and the Barkly Tablelands. It comprises 434,000 square miles, or about two-thirds of the total State area. This part of the State is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores, and, where normal surface storage is not readily available, on excavated tanks. At 30 June 1972, a total of 3,265 artesian bores had been drilled in the Great Artesian Basin, of which 2,206 continue to flow, providing a supply of 195 million gallons per day. Although this supply will continue to diminish for a further 30 to 40 years, after that time a steady and continuous flow of some 130 million gallons per day is expected to be maintained.

#### **Stock route watering**

In 1935 the Trunk Stock Route System was inaugurated and from then on the construction of watering facilities on stock routes was greatly expanded. The Irrigation and Water Supply Commission acts as a constructing authority for the Stock Routes Co-ordinating Board in these matters, and had to 30 June 1972, completed 632 facilities with a further 7 under construction and 3 under investigation. The two authorities mentioned above carry out continuous investigation to ascertain general stock movements so that new facilities may be provided as required.

#### **Farm water supplies**

Under *The Farm Water Supplies Assistance Acts*, 1958 to 1965, technical assistance is available to landholders throughout the State on all matters relating to water conservation and utilisation for domestic, stock and irrigation purposes, on individual holdings or groups of holdings, covering construction of farm dams, irrigation bores and stock bores, and pumping and distribution systems. In addition, the Government provides finance to farmers by way of special Agricultural Bank loans, and technical advice on construction and installation. During 1971–72, 734 applications were received for assistance under these Acts, and \$446,527 was paid in advances by the bank, bringing advances over the 14 years of operation of the Acts to \$8,457,732.

## South Australia

Brief particulars of the climatic conditions in South Australia are given on page 1129 of Year Book No. 37. (See also the chapter Physical Geography and Climate of this issue.)

### Administration

Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act, 1932-1971 and Water Conservation Act, 1936-1969, both of which empower the Minister of Works to impound or divert the water from any lake, watercourse or underground source for the purpose of establishing and maintaining public water supply schemes. The Waterworks Act, 1932-1971 governs the principal reticulated water supplies in proclaimed water districts throughout the State. A feature of these supplies is the extensive network of water mains supplying country townships and farmlands where local water resources are practically non-existent.

Under the Water Conservation Act, 1936-1969, small dams, wells, bores, rainsheds, storages and, in some instances, minor reticulation works are provided in remote areas to assist local settlers in development and to supply travellers and travelling stock.

### Irrigation

Australian irrigation originated in the upper Murray in South Australia and the Mildura area of Victoria. South Australian irrigation commenced with an agreement between the Government and the Chaffey brothers in 1887 whereby an area of land at Renmark was made available for the establishment of certain irrigation works. In South Australia, irrigation is almost exclusively confined to the Murray Valley. Except for quantities held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped onto the land or gravitated from the river.

The two major authorities administering irrigation areas are the Department of Lands and the Renmark Irrigation Trust. The Trust is controlled by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold. Every settler is entitled to vote for the election of Trust members. The Trust maintains eighty miles of reticulation channels, which are being progressively replaced by underground pipelines financed by Trust revenue, State Government grants and loans.

### Irrigated culture

The following table shows details of the area of crops and pasture and the methods employed on land under irrigated culture during the 1971-72 season.

AREA OF LAND UNDER IRRIGATED CULTURE: SOUTH AUSTRALIA, 1971-72

(Acres)

							Method of irrigation					
							Spray	Furrow	Flood	Trickle	Multiple Methods	Total Area
Crops—												
Cereals	.	.	.	.		477		220	..	..		697
Fruit	.	.	.	.		22,349	8,302	181	981	234		32,047
Vegetables	.	.	.	.		13,788	1,676	98	55	137		15,754
Vineyards	.	.	.	.		10,690	25,356	994	1,914	194		39,148
Other Crops(a)	.	.	.	.		1,382	26	284	2	23		1,717
Total crops						48,687	35,360	1,777	2,952	588		89,363
Lucerne	.	.	.	.		31,212	40	9,355	..	139		40,746
Pastures	.	.	.	.		19,796	299	37,670	..	119		57,884

(a) Includes fodder crops.

### Water supply schemes

*Adelaide Metropolitan Water Supply.* Adelaide and surrounding areas of development including Elizabeth derive their water from nine reservoirs in the nearby Mount Lofty Ranges and by means of pumping stations and a pipeline from the Murray River at Mannum. The reservoirs have a storage capacity of 153,000 acre feet and the pipeline has a nominal capacity of 95,500 acre feet a year.

A second pipeline extending from Murray Bridge to convey River Murray water to the metropolitan supply system is under construction. This pipeline will initially have a capacity of 132,200 acre feet per year. The consumption for the whole area for the year 1971-72 was 120,460 acre feet. The capital cost to 30 June 1972 was \$153,395,000.

*Country reticulated supplies.* Areas extending to a distance of 90 miles north of Adelaide are supplied from the Warren, Barossa and South Para Reservoirs (50,470 acre feet) in the Barossa Ranges. Supplies to these areas are supplemented by River Murray water delivered into the Warren trunk main by a pipeline extending from Swan Reach to a point near Stockwell. This pipeline has a nominal capacity of 20,200 acre feet per year. Agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, and the Morgan-Whyalla Pipeline. The original 223-mile pipeline from Morgan to Whyalla and a second and larger pipeline completed in 1966 are at present able to carry 53,300 acre feet of water a year from the River Murray. A large part of Eyre Peninsula is supplied, through the 240-mile Tod River Main and the 104-mile East Coast Main, with water from the Tod River Reservoir (9,196 acre feet), the sand beds of the Uley-Wanilla Basin, the Lincoln Basin, and Poldia Basin. Along the Murray River all towns are supplied from the river. Water from the river is also reticulated through adjacent farmlands for up to 30 miles, and a pipeline extended from Tailem Bend to Keith provides the means of reticulating Murray water to numerous towns and a large area of farmlands in the upper south-east. Surface and underground resources have been developed to supply most rural centres not covered by the larger schemes. Water conservation and distribution works in country districts to 30 June 1972 have cost \$166,201,000 (exclusive of river control and irrigation works on the Murray River) and contain 8,659 miles of water mains.

#### **Underground water**

For information on underground water resources in South Australia *see* Year Book No. 55 and earlier issues.

#### **Farm water schemes**

The Department of Mines gives assistance to individual farmers in the provision of supplies from underground sources, and the Department of Agriculture provides an advisory service on water conservation and irrigation designs on farms, and on the suitability of surface and underground water for irrigation and stock purposes. In addition, a great part of the farming areas is supplied by the Engineering and Water Supply Department with water under pressure from extensive distributions systems connected to various reservoirs and the Murray River.

#### **South-eastern drainage**

In the south-east of South Australia it has been necessary to construct drainage schemes to dispose of surplus water from areas where a series of valleys or flats is separated by low ranges, parallel to the coastline, which prevent natural drainage. The Millicent Drainage System, completed in 1885, reclaimed 100,000 acres. The South-eastern Drainage Area System, which is controlled by the South-eastern Drainage Board, comprises drains constructed by the State Government at public expense, plus those undertaken by the Government in co-operation with the landholders. The area is bounded on the east by the State boundary, and on the west by the sea coast. It extends from about 55 miles north of Kingston, southerly to near Millicent and Kalangadoo. Up to 1948 about 430 miles of drains had been provided at a cost of \$1,441,752. These were of a developmental nature intended more to promote the rapid removal of floodwaters than to provide a complete system of drainage. Since 1948 the complete drainage of the Biscuit, Reedy Creek and Avenue Flats in the Western Division has been carried out. The southern section of 260,000 acres involved the excavation of 8,100,000 cubic yards in providing 343 miles of new or enlarged drains, whilst the northern area of 140,000 acres required the excavation of 3,051,500 cubic yards in the construction of 99 miles of drain.

The drainage of 727,000 acres in the Eastern Division of the South-east, situated east of Bakers Range and extending from near Kalangadoo to north of Naracoorte, was commenced, in 1960 and completed in 1970. The work required the construction of a main diversion drain (consisting of the enlargement of 24 miles of existing drain and the construction of 22 miles of new drain) from the sea at Beachport to the Naracoorte-Mount Gambier railway line near Struan. The provision of new branch drains and the enlargement and extension of existing branch drains completed the approved works. A total excavation of 7,300,000 cubic yards over a length of 117.5 miles of new or enlarged drains was involved.

The capital cost of drainage in the South Eastern Drainage Area System to 30 June 1972 was \$18 million, and the length of drains constructed was 875 miles. An extensive system of private drains (many of which discharge into drains constructed under Government authority) also exists in the South-east of the State.

### Murray River Irrigation Areas

Where irrigation water in excess of plant requirements has been applied, perched water tables develop. Rising to the level of tree roots, these cause the death of orchards from salination and water-logging. Most orchards and vineyards are now drained by plastic and tile drainage systems, thus restoring their health and productivity. Disposal of drainage water is achieved by pumping to basins on river flats where it evaporates, or by discharge into the river when flow is high. It may also be discharged into underlying sand and limestone aquifers. The usefulness of these aquifers is declining as they are becoming fully charged with water.

## Western Australia

Brief particulars of the climatic conditions in Western Australia are given on page 1133 of Year Book No. 37. (See also the chapter Physical Geography and Climate of this issue.)

### Administration

The Minister for Water Supply, Sewerage and Drainage administers the departmental irrigation schemes under the *Rights in Water and Irrigation Act, 1914-1971*. He is advised by an Irrigation Commission representing the local irrigationists and governmental, technical and financial branches. He also administers, under the *Country Areas Water Supply Act, 1947-1964*, the water supplies to certain country towns and reticulated farmland. As Minister for Works he controls minor non-revenue producing supplies to stock routes and a few mines and agricultural areas with their associated communities. A small number of town supplies are administered by local boards under the *Water Boards Act, 1904-1969*, which provides a large degree of autonomy with ultimate Ministerial control.

### Irrigation

Irrigation schemes have been established by the Government on the coastal plain south of Perth in the Waroona, Harvey and Collie River Irrigation Districts between Waroona and Dardanup, the water being channelled from dams in the adjacent Darling Range.

Logue Brook Dam with a capacity of 19,717 acre feet, Harvey Weir (7,194 acre feet) and Stirling Dam (46,191 acre feet) supply the Harvey Irrigation District, the rated area of which is 13,783 acres. The Harvey District links up with the Waroona Irrigation District, which is served by Waroona Dam (12,105 acre feet), Drakes Brook Dam (1,855 acre feet) and Samson Brook Dam (7,437 acre feet) and comprises a rated area of 3,483 acres. Wellington Dam on the Collie River with a capacity of 150,107 acre feet serves an area of 12,115 rated acres in the Collie River Irrigation District. Pastures for cattle comprise 88.6 per cent of water usage in these districts. Glen Mervyn Dam (1,209 acre feet) stores water for regulated release down the Preston River for irrigation of orchards and crops when the natural summer stream flow is insufficient to meet the demand.

Since the mid 1930's, a centre of tropical agriculture has been developed at Carnarvon, near the mouth of the Gascoyne River. Private pumping from sands of the Gascoyne River is the principal source of irrigation water for the 158 plantations. Because of the high risk of drawing in surrounding saline ground waters by over-pumping, the usage of water by the planters is controlled strictly by the Government. The Government is developing up-river sources and delivers water by pipeline to 70 plantations in the district. Bananas for the Perth market and fruit and vegetables for the Perth and Adelaide markets are the principal crops. A tropical research station is maintained at Carnarvon by the Department of Agriculture.

A project has been embarked upon to provide water supplies for irrigation in the area traversed by the Ord River in the Kimberley Division. The project provides for the eventual development of an area of 178,000 acres of land agriculturally and topographically suitable for irrigation.

The first stage, in which water was supplied to 30 farms averaging 660 acres plus a 2,400 acre pilot farm from the Bandicoot Bar Dam with a capacity of 80,000 acre feet, was completed in 1965. Cotton has been the principal crop but considerable interest is now being shown in grain sorghum. The Ord River Dam was completed in 1971 and will store 4.6 million acre feet in Lake Argyle to serve a further area of 148,000 acres, approximately one-third of which is located in the Northern Territory.

On the Liveringa flood plain, water is diverted from the Fitzroy River into a dam on Uralla Creek, which together with a natural storage of about 1,200 acre feet, provides for irrigation at Camballin 65 miles south-east of Derby. Grain and fodder sorghums are grown in the area.

**Irrigated culture**

The following table shows details of the area of crops and pasture and the methods employed on land under irrigated culture during the 1971-72 season.

**AREA OF LAND UNDER IRRIGATED CULTURE: WESTERN AUSTRALIA, 1971-72**

**Country water supplies controlled by Department of Public Works and Water Supply**

Since 1947 enlargement and extensions of the Goldfields and Agricultural Water Supply and the development of the Great Southern Towns Water Supply have been carried out, mainly in accordance with a project known as the Modified Comprehensive Scheme. Under this scheme water has been supplied to towns and farms in an area of five million acres in mixed farming (cereal and sheep) districts of Western Australia. The modified scheme was completed in 1961 at a cost of \$20.6 million, of which the Commonwealth contributed \$10 million under the *Western Australia Grant (Water Supply) Act 1948*. A further request was made by the State Government in 1963 for a grant of \$10.5 million representing half the estimated cost of proposed extensions which would increase by 3.7 million acres the area served by the scheme. The Commonwealth agreed to provide assistance in the form of an interest-bearing loan up to a maximum of the amount requested, advances to be made during a period of eight years commencing 1965-66. Legislative authority for the loan is given by the *Western Australia (South-west Region Water Supplies) Agreement Act 1965*.

Mundaring Reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the Eastern Goldfields. It has a capacity of 62,435 acre feet and is connected to Kalgoorlie by a pipeline with extensions to towns and agricultural areas. At 30 June 1972 the Goldfields and Agricultural Water Supply was serving 112 towns and localities, and water was being reticulated to farms in an area of 6.2 million acres. The total length of pipelines was 4,654 miles and the number of services was 26,670. Consumption during 1971-72, including supplies drawn from local schemes and from the Metropolitan Water Supply, was 3,885 million gallons.

The Great Southern Towns Water Supply pipes water from Wellington Dam to towns on the Great Southern Railway from Brookton to Katanning as well as a number of other towns. At 30 June 1972 the Supply was serving 30 towns and water was being reticulated to 1.5 million acres of farmland. The total length of pipelines was 968 miles, and the number of services was 10,202. Consumption during 1971-72, including supplies drawn from local sources, was 897 million gallons.

One hundred and twenty-eight local schemes supply water from stream flow, dams, tanks, wells, and bores, mainly to country towns. At 30 June 1972 the total length of water mains was 1,157 miles and the number of services was 33,677.

**Other country water supplies**

As well as the schemes controlled by the Department of Public Works and Water Supply, there are four local Water Boards which draw supplies from stream flow, dams, wells, and bores. In addition, some local authorities supply water within their boundaries. The Forests Department, sawmilling companies, and mining companies operate schemes to supply water to their towns and

operations. Railways of the Commonwealth and State Governments make independent provision for supplies of water for their own purposes, although considerable additional quantities are consumed by the railways from other sources, such as those controlled by the Department of Public Works and Water Supply and the Metropolitan Water Supply, Sewerage and Drainage Board.

### **Underground water**

For information on underground water resources in Western Australia *see* Year Book No. 55 and earlier issues.

## **Tasmania**

Brief particulars of the rainfall pattern in Tasmania are given on page 1136 of Year Book No. 37. (*See also* the chapter Physical Geography and Climate of this issue.)

### **Main purposes of water conservation and utilisation**

Because of the generally more adequate rainfall in Tasmania, scarcity of water is not such a problem as it is in most mainland areas, though not all streams are permanently flowing. The only large scale conservation by reservoirs is for hydro-electric power generation, but there are some moderately sized dams built by mining and industrial interests and by municipal authorities for town water supplies. 'Run of the river' schemes are quite adequate for assured supply in many municipalities. The main supply for Hobart and adjacent municipalities originates from a 'run of the river' scheme based on the Derwent River. The river is controlled in its upper reaches by eight dams, built for hydro-electric power generation, and these tend to stabilise river flow.

Until a few years ago irrigated areas were negligible except for long established hop fields, but there is a rapidly expanding use of spray irrigation on orchards, pastures, potatoes, and beans. Until recent years there has been almost complete dependence on natural stream flows, but the need for some regulating storages has become apparent. Increasingly, farmers are constructing storages of their own, and the extension of this practice is foreseen as the logical solution in most areas, as valleys are narrow and steep sided. Single large reservoirs cannot economically serve large areas of suitable land, as nearly every valley is separated from others by pronounced hills, prohibiting the construction of cross-country channels.

Underground water suitable for stock, minor irrigation works and domestic use is exploited in the consolidated rocks of southern, midlands and north-western Tasmania. In the south and midlands nearly all groundwater is obtained from Permian and Triassic rocks. In the north-west, water is recovered from a variety of rocks ranging from Precambrian dolomites, quartzites and schists to Tertiary basalts and Quaternary sands. The highest yields are obtained from the dolomites and the basalts. In the central north and north-east unconsolidated Tertiary clays and gravels yield water of variable quality, and in some coastal areas, notably King and Flinders Islands, water is obtained from Aeolian sands.

The Mines Department is charged with the investigation of underground water resources and is currently drilling in the Longford (central north) and Scottsdale-Bridport (north-east) Tertiary areas, and is also examining the prospects of coastal sand supplies on the East Coast. There is a great reserve of untapped permanent streams in the western half of the State, which is largely unsettled. The State's largest rivers discharge in the west, but diversion to the eastern half of the watersheds is not regarded as practicable.

### **Administration**

In Tasmania, water supply was once exclusively the responsibility of local government authorities, but two statutory authorities, the Metropolitan Water Board and the Rivers and Water Supply Commission, now operate bulk supply schemes, piping water for distribution by the local government authorities in the Hobart and Launceston regions, and directly to certain industrial consumers.

*Metropolitan Water Board.* The overall control of the supply of water to the cities of Hobart and Glenorchy and the municipalities of Kingborough and Clarence is vested in the Metropolitan Water Board, the local government authorities retaining primary responsibility for reticulation and sales to consumers. Water is also supplied by the Board to urban areas in the Sorell, New Norfolk and Brighton municipalities. The major source of water is the River Derwent at Lawitta, where two pumping stations are installed. The Metropolitan Water Board controls two schemes, the West Derwent Water Supply and the Southern Regional Water Supply. The first was originally constructed

to serve Hobart, Glenorchy, Kingborough and Clarence; the second constructed by the Rivers and Water Supply Commission, but now under the control of the Board, serves that portion of Greater Hobart situated on the eastern shore of the River Derwent. The responsibility for raising loans and debts servicing necessary to meet the capital cost of constructing and adding to the schemes rests with the Metropolitan Water Board.

*Rivers and Water Supply Commission.* The Commission is empowered by the *Water Act 1957* to take water at streams and lakes, or to issue others with licences to do so; licensing covers supply to specific industries and municipalities as well as irrigation. The Commission is concerned with drainage trusts' operations, river improvements (including repairs after flood damage), stream gauging, its own regional water schemes, and with water supply, sewerage and drainage of towns. It operates in a similar manner to the Metropolitan Water Board in controlling the water schemes serving the East Tamar region (North Esk Regional Water Supply), the West Tamar area (West Tamar Water Supply) and the Prosser River Scheme, which supplies water to a sodium alginate industry at Louisville near Orford, and supplements the water supply of the township of Orford. The North Esk Regional Water Supply was constructed to meet industrial requirements of the aluminium refinery and other industries at Bell Bay, and to provide bulk supplies to surrounding municipalities on the eastern bank of the River Tamar. The West Tamar Water Supply was constructed primarily to meet domestic requirements of urban areas in the Beaconsfield municipality. The local government authorities retain primary responsibility for reticulation and sale to consumers, except to certain industrial users.

In municipalities not serviced by the Metropolitan Water Board or the Rivers and Water Supply Commission, the supply of water is a function of the local municipal council. Where the construction of water and sewerage schemes is beyond the financial capacity of a local government authority, or if it requires assistance to pay for water supplied from regional schemes, the Commission may make recommendations to the Minister for payment of a subsidy.

#### **Industrial water schemes**

Four principal industrial water schemes have been installed privately—for a paper mill near Lawitta on the Derwent River, for a paper mill at Burnie using water from the Emu River, for another at Wesley Vale using water from the Mersey River, and for a factory at Heybridge reticulating water from Chasm Creek. The State Government has constructed some water schemes for use primarily for industrial purposes. These include the scheme serving the aluminium refinery at Bell Bay referred to above, a storage supplementing the summer flows of the Kermadie River for use by a wood-pulping plant at Geeveston, and the Prosser River Scheme referred to above.

#### **Irrigation**

The Cressy-Longford Irrigation Scheme has commenced operations servicing some 40 farms with irrigation water by either flood or spray sprinkler systems. This scheme, which was designed and is operated by the Rivers and Water Supply Commission, involves the diversion of water from the tailrace of the Poatina hydro-electric power station through some 60 miles of earthen channels to irrigate eventually some 20,000 acres. At least half this area will be served by gravity and it is estimated that under maximum development 6,000 acre feet of water annually would be available to farmers both inside and outside the irrigation district. The scheme will provide an augmented flow to two rivers which will increase the amount of water available for irrigation by downstream landowners. It is expected that the scheme will be fully operational for the 1973-74 irrigation season.

The Rivers and Water Supply Commission has completed preliminary investigations for establishing schemes in the valleys of the Jordan, Coal and Meander Rivers. It is currently investigating possible schemes to serve the Winnaleah area and the Brid River valley.

With the exception of the Cressy-Longford Scheme and a privately owned scheme at the Lawrenny estate at Ouse there are no other extensive irrigation works utilising one common source of water supply in Tasmania. A large portion of the area under irrigation in the State is watered by private schemes pumping water from natural streams.

**Irrigated culture**

The following table shows details of the area of crops and pasture and the methods employed on land under irrigated culture during the 1971-72 season.

**AREA OF LAND UNDER IRRIGATED CULTURE: TASMANIA, 1971-72**

(a) Includes fodder crops.

**Northern Territory**

Some particulars of the climate and main topographical features of the Northern Territory are given on page 1138 of Year Book No. 37, and in this issue information on climatic conditions will be found in the chapter Physical Geography and Climate, and a brief outline of contour and physical characteristics in Chapter 28, The Territories of Australia.

**Administration**

Under the *Control of Waters Ordinance* 1938-1971 of the Northern Territory, natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and the diversion of water is prohibited except under prescribed conditions. The Ordinance requires that drilling for ground-water be carried out only by drillers who are registered under the Ordinance. Registered drillers are required to provide the Government with information on bores drilled including the location, depth and size of bore, strata encountered and water produced. In particular areas, described as Water Control Districts, where stricter control is necessary the construction or use of a well or water bore without a permit can be prohibited.

Under the *Water Supplies Development Ordinance* 1960-1971 any landholder engaged in pastoral or agricultural production may seek information or advice from the Commissioner of Water Development who is appointed under the Ordinance. He may also apply for an advance towards the cost of work proposed to be carried out. The Ordinance also provides for a refund to the landholder of the cost of drilling an unsuccessful bore where the landholder had applied to the Commissioner for advice on its construction and has carried out all drilling operations in accordance with advice given.

There is a Water Resources Branch of the Department of the Northern Territory under the control of a Director. The Branch carries out systematic stream gauging, the collection of data relating to the quantity and quality of surface and groundwater, the planning of water use for irrigation and town water supplies, and flood prevention and control. It also provides a general advisory service to the public on water resources and water conservation by providing information on the geology of the Territory, the prospects of obtaining groundwater, the possible location of bore sites, the method of drilling and equipping bores, information on stream flows, surveys of dam sites, the design of water supply schemes and reticulation layouts, and on the chemical and bacteriological quality of water supplies.

**Underground water**

For information on underground water resources in the Northern Territory see Year Book No. 55 and earlier issues, and the Australian Water Resources Council's 1972 publication, "Ground-water Resources of Australia".

At 30 June 1972, 7,981 bores and wells were registered in the Northern Territory. Of these 4,753 were for pastoral use, 415 for agricultural use, 645 served town domestic water supplies, 140 were in use on mining fields, 906 were investigation bores, 431 were Government established stock route bores and 691 were classified under other uses. These include successful bores which have collapsed and bores which were unsuccessful owing to drilling difficulties, or to insufficient quantity or poor quality of underground water.

#### **Community water supplies**

The largest water conservation projects in the Territory are the Darwin River Dam (210,000 acre feet) and the Manton Dam (12,700 acre feet) which both serve Darwin with a reticulated water supply. Groundwater is also pumped from McMinns Lagoon area to augment supply.

Most other towns and communities are supplied by groundwater. A few are supplied by both ground and surface waters depending on relative quality variations throughout the year.

#### **Surface water measurement**

The hydrological investigations required in the Northern Territory as part of the National Water Resources Assessment Programme are being carried out by the Water Resources Branch. The program for the Northern Territory includes establishment of base gauging stations and pluviograph rainfall recorders. In particular areas of development where water supply or irrigation proposals require special or extra surface water data, supplementary gauging stations are built to obtain this information. At 30 June 1972, the Northern Territory stream-gauging network comprised 272 operating stations; of these 198 were base gauging stations and 74 were supplementary gauging stations.

Irrigation for agricultural purposes in the Territory is not extensive, being confined to isolated areas near the Darwin, Adelaide River, Coomalie Creek, Daly River, Katherine River, Wickham River, Douglas River, Edith River and Alice Springs area, with only small acreages being utilised. In the Territory 81 licences to divert water from streams were current at 30 June 1972. The total licensed area for irrigation is 5,130 acres, but the actual area irrigated is less than this. There are also a number of farms irrigated from bore supplies, particularly in the Alice Springs area. Purposes for which irrigation water is used include the growing of fruit, vegetables, crops and pastures, and also dairying and mixed farming.

Both the Daly and Adelaide Rivers appear to offer considerable potential for irrigation development with regulation of the rivers. Extensive investigations are being conducted into possible dam sites and areas of land suitable for irrigation in the region, and there is a need for other associated studies. Irrigation trials are in progress using water from the high-production bores in the Daly Basin. Further exploratory drilling in this area is being carried out. There is an increasing demand for water resource assessment studies and assistance for relatively small irrigation projects.

Investigations are continuing into areas of the Northern Territory which may be suitable for irrigation from the main storage on the Ord River in Western Australia.

### **Australian Capital Territory**

The climate of the Australian Capital Territory (*see* Chapter 2) with its moderate rainfall and high evaporation over the growing season is such that water conservation and irrigation are practised.

Groundwater in the A.C.T. and environs occurs mainly in fractures, joints and weathered zones of crystalline rocks such as porphyry, granite, limestone and metasediments. Alluvial aquifers are restricted to the Lake George basin and small areas along mature sections of the Molonglo and Murrumbidgee Rivers. Very minor perched aquifers occur. Recharge mainly takes place in the cooler months of the year.

Currently there are 103 bores for all purposes in the A.C.T.; 69 cater for domestic, stock and irrigation purposes, four are for industrial purposes and 30 are observation bores which the Bureau of Mineral Resources has progressively established over the past 12 years as part of its policy of assessing the groundwater resources of the region and gathering basic hydrogeological data. The yield from the bores ranges mainly from 100 to 1,800 gph and exceptionally to 10,000 gph.

In 1971-72, a total area of 971 acres was under irrigated culture in the A.C.T. The crop areas were orchards, 17 acres; vegetables, 113 acres; nurseries, 5 acres; fodder crops, 59 acres; lucerne for hay, 370 acres; and pastures accounted for 407 acres. Of the total area irrigated, 848 acres was irrigated from surface sources, 115 acres from bores and 8 acres from the reticulated water supply. The spray method of irrigation was utilised on 967 acres.

Control of irrigation and farm water supplies is exercised by the Conservation and Agriculture Branch of the Department of the Capital Territory. The Bureau of Mineral Resources of the Department of Minerals and Energy provides technical advice on groundwater, and occasionally on run-off, to landholders.

Water conservation on farm holdings was shown to be deficient in the severe 1965–68 drought when stock were moved to areas outside the A.C.T. Improvements by the provision of additional or larger farm dams and of bores have been made in recent years.

### **Papua New Guinea**

Rainfall in Papua New Guinea varies considerably from approximately 240 inches near Lindenhafen (New Britain) and 230 inches at Kikori (Papua) to about 70 inches near Marienburg (New Guinea) and 40 inches at Port Moresby (Papua). For a general description of these territories *see* Chapter 28, The Territories of Australia of this Year Book. Irrigation has not been developed on any organised basis owing to the availability of high rainfall and the nature of agricultural development.

Papua New Guinea is well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to over 14,000 feet, but complete data regarding water resources are not available. During 1971–72 the Government continued the development of a national network of stream-gauging stations which can be used in assessing the water resources of Papua New Guinea, while continuing to collect more detailed hydrological data for proposed hydro-electric projects.

The largest rivers in the Territory include the Fly (700 miles long, situated in the Western division of Papua), the Sepik (700 miles), the Ramu (450 miles), the Purari (300 miles), and the Markham (110 miles). The main water conservation interest in New Guinea at present is the hydro-electric potential, which is extensive. An outline of schemes at present in operation is given in Chapter 28 The Territories of Australia.

## CHAPTER 24

# FORESTRY

### Source of statistics

Statistics relating to forestry are, in general, provided by the various authorities concerned with forestry administration. Statistics relating to forest products and employment in forestry contained in this chapter have been collected by the Statisticians of the various States, mainly from information provided by the State forestry authorities. Other information on forested areas has been provided by the Commonwealth Forestry and Timber Bureau. Statistics of sawn timber and by-products and manufacturing establishments engaged in their production have been compiled from the annual censuses of manufacturing undertaken by the Statisticians in the several States. Data on imports and exports of forest products and sawn timber and timber products have been compiled in the Commonwealth Bureau of Census and Statistics as part of the statistics of overseas trade. The figures shown relate, in general, to years ended 30 June.

### Forestry in Australia

#### Objects of forestry

The main object of forestry authorities is to manage the forests of the country in a manner that will provide the maximum benefits, both direct and indirect. Direct benefits include the provision of essential commercial commodities such as structural timber, pulpwood, plywood, veneers, firewood, bark products, tars, oil, and resins. Indirect benefits include protection of soil and stock from wind and exposure, regulation of stream flow, provision of recreational facilities, and aesthetic effects. Forestry also aims at improving existing forests and woodlands by properly controlled harvesting, by protection from such destructive agencies as fire and insect attack, and by inducing regeneration. The provision of a partial tree cover on denuded lands where this cover is necessary for protective purposes, and a complete cover when the land is better under forest than under any other land use, are further aims of forestry.

#### General account of forests and timbers

The area of land in Australia suitable for the production of commercial timber as a primary crop is very small in comparison with the size of the continent. Broadleaved forests (hardwoods) cover 76 per cent of the total forested area, and approximately 95 per cent of the broadleaved forest area is occupied by eucalypts.

*Eucalypts.* The genus *Eucalyptus* is remarkable in that it includes some 500 known species, ranging in size from the mighty forest giants, mountain ash (*E. regnans*) of Victoria and Tasmania, and karri (*E. diversicolor*) of Western Australia, down to the small mallee species which inhabit vast areas of the inland. The habitats range from the inland plains to the high mountain areas in the Australian Alps, and from areas with the annual rainfall as low as 10 inches to those where it is 150 inches. Of the 500 species, only about 100 are used for sawmilling, and not more than 40 of these are exploited extensively.

The better class of eucalypt forest is concentrated mainly in the higher rainfall areas such as the east coast, the highlands of southern New South Wales, Victoria and Tasmania, and the south-western corner of Western Australia. The more important species include blackbutt (*E. pilularis*), tallowwood (*E. microcorys*), flooded gum (*E. grandis*), and red mahogany (*E. resinifera*) of New South Wales and Queensland; alpine ash (*E. delegatensis*) of New South Wales, Victoria and Tasmania; mountain ash (*E. regnans*), messmate (*E. obliqua*) and blue gum (*E. bicostata*) of Victoria and Tasmania; and karri (*E. diversicolor*) of Western Australia. For height and grandeur, mountain ash and karri are unequalled among the broadleaved trees of the world and are excelled only by a few North American coniferous (softwood) species.

In the coastal regions with lower rainfall the eucalypt forests contain many durable species such as the ironbarks, grey gums and bloodwoods of the east coast, and jarrah (*E. marginata*) and tuart (*E. gomphocephala*) of Western Australia. The spotted gum (*E. maculata*) occurring in New South Wales and Queensland is another example.

Along most of the inland streams and adjacent flood-plains there are riverain forests consisting mainly of river red gum (*E. camaldulensis*), a very durable tree which has supplied large quantities of sawn timber, railway sleepers and fence posts.

Eucalypts also occur in open forest and savannah woodland formations in areas receiving a reliable rainfall of about 10 to 20 inches per annum, as on the goldfields of Western Australia where salmon gum (*E. salmonophloia*), brown mallet (*E. astringens*) and wandoo (*E. wandoo*) occur. These trees are of considerable value for firewood, as mining timbers and for fencing. Minor forest products such as sandalwood, tan bark, essential oils, etc., also come from isolated areas in this type of country, and in the more arid areas.

*Other broadleaved timbers (hardwoods).* Broadleaved genera other than *Eucalyptus* cover a comparatively small portion of the forested land in Australia; however, the areas concerned provide a great variety of timbers suitable for a multitude of uses. There are two basic types of forest containing supplies of broadleaved timbers other than eucalypts, namely, the tropical and sub-tropical rainforests of coastal Queensland and New South Wales and the temperate rainforests of southern Victoria and Tasmania, both of which yield species known collectively as rainforest or brushwood species.

The tropical and sub-tropical rainforest along the eastern coast of Australia contains a large number of different species. Tropical rainforest occurs in northern Queensland in the vicinity of Cairns and on the Atherton Tableland, providing such well-known cabinet woods as Queensland maple (*Flindersia brayleyana*), Queensland walnut (*Endiandra palmerstonii*) and the silky oaks. The sub-tropical rainforest found in southern Queensland and northern New South Wales yields the tulip oak, crab apple (*Shizomeria ovata*) and white beech (*Gmelina leichhardtii*). Coachwood (*Ceratopetalum apetalum*) and sassafras (*Doryphora sassafras*) occur in regions to the south near Dorriggo and have yielded valuable timber for many years.

Temperate rainforest which is to be seen in southern parts of Victoria and western Tasmania consists mainly of myrtle beech (*Nothofagus cunninghamii*), but produces also southern sassafras (*Atherosperma moschata*) and blackwood (*Acacia melanoxylon*).

Turpentine (*Syncarpia glomulifera*), an excellent harbour pile timber resistant to marine borer attack, and brush box (*Tristania conferta*), a superior structural and decking timber, are found in association with some eucalypts in the wetter rainfall areas on the north coast of New South Wales and in southern Queensland.

*Conifers (Softwoods).* One of the most important species of native conifers is white cypress pine (*Callitris columellaris*). The main cypress pine forests of commercial value occur in New South Wales and southern Queensland west of the Great Dividing Range. The trees are comparatively small, but the timber has particular value owing to its durability including resistance to termites. It is suitable for use as scantlings, flooring, linings, weatherboards, poles, and posts. As much of the area originally covered by cypress pine has been cleared for wheat farming and grazing, the production from the remaining State forests is now strictly regulated to ensure a continuous supply.

Another important native conifer is hoop pine (*Araucaria cunninghamii*), which occurs naturally in the sub-tropical rainforest of southern Queensland and northern New South Wales associated with tulip oak, crab apple, white beech, coachwood, and sassafras. The greater part of the original hoop pine forests has been exploited, but considerable areas have been replanted to this species in Queensland and, to a lesser extent, in New South Wales.

Other native conifers which have played a useful but minor part in the Australian timber industry include bunya and kauri pines (*Araucaria bidwillii* and *Agathis palmerstonii*) of Queensland, and celery-top, Huon and King William pines (*Phyllocladus asplenifolius*, *Dacrydium franklinii* and *Athrotaxis selaginoides*) of Tasmania. Kauri pine is found in the tropical rainforest of northern Queensland in association with non-eucalypt broadleaved trees, while bunya pine occurs in the sub-tropical rainforests. In the temperate rainforests of Tasmania celery-top, Huon and King William pines are found in association with myrtle beech, southern sassafras and blackwood.

### Extent of forested areas

Estimates prepared for the Food and Agriculture Organisation World Forest Inventory 1970, show the total area of forests plus other wooded areas as 340.4 million acres in 1970. This represents a smaller figure than the previously published result of a similar survey taken in 1965 for the Food and Agriculture Organisation which showed the total area of forests and woodlands as 599.7 million acres. The difference is largely explained by the fact that the definition of 'woodland' was changed considerably between the two reference dates.

## CLASSIFICATION OF FOREST AREA(a): AUSTRALIA

(Source: Forestry and Timber Bureau)

('000 acres)

<i>Types of forest</i>	<i>Area</i>
<b>FORESTS AND OTHER WOODED AREAS</b>	
Forests under exploitation . . . . .	65,269
Forests not under exploitation(b)—	
Excluded from exploitation by law . . . . .	4,978
Other . . . . .	23,498
<i>Total forests</i> . . . . .	93,745
Other wooded areas(c) . . . . .	246,625
<b>Total forests and other wooded areas</b> . . . . .	<b>340,370</b>

## OWNERSHIP OF FORESTS

<b>Publicly-owned forests—</b>	
State forests . . . . .	41,355
Other forests . . . . .	30,270
<i>Total publicly-owned forests</i> . . . . .	71,625
Privately-owned forests . . . . .	19,412
Ownership not yet determined . . . . .	2,708
<b>Total forests</b> . . . . .	<b>93,745</b>

(a) Date of inventory 31 March 1970. (b) Areas of lowgrowing mallee and similar associations of woody vegetation are not included.  
(c) Includes woodlands, scrublands, etc., not regarded as forests.

## Forest reserves

The distribution of forest reserves is shown by States and Territories in the following table. Detailed comparisons between States are not possible because of the lack of uniform definitions.

## FOREST RESERVES: STATES AND TERRITORIES, 31 MARCH 1972

(a) Land permanently dedicated to timber production. (b) Includes flora and fauna reserves, scenic reserves, state and national parks, and water catchment areas. (c) Includes other timber reserves, land reserved for fuel supply, and vacant forested crown land. (d) Excludes Aboriginal reserves in the N.T. totalling 62,348,000 acres which are estimated to be 90 per cent forest.

### Categories of forest reserves

- (i) *Production reserves* consist of forest lands 'permanently' reserved—by law whether Federal, State or local—for the production of logs, pulpwood, pit props, poles, posts or fuelwood for commercial purposes.
- (ii) *Protection reserves* consist of reserved lands, the management of which is principally aimed at the protection of natural resources, of fauna and flora, or at other purposes not directly related to the production of wood (e.g., parks, watersheds, soil conservation areas, etc.). Industrial cutting may or may not be allowed in these protection reserves. Industrial cutting includes the cutting of logs, pulpwood, pit props, poles, posts or fuelwood for commercial purposes. The cutting of logs for the production of sawnwood for local consumption is considered as industrial cutting; however, the cutting of poles and fuelwood for personal consumption on a casual or occasional basis is not considered as an industrial cutting.
- (iii) *All other reserves* consist of reserved forest lands not included above.

A considerable proportion of the permanently reserved areas is in inaccessible mountainous country, and many of the forests contain a mixture of species, only some of which are at present of commercial value. Much of the area consists of inferior forest, and a large proportion of the whole has been seriously degraded by recurrent fires.

## Softwood plantations\*

### General

The term "softwood" has long been used to represent the wood of the Coniferae, of which the most important family is the Pinaceae. This family consists primarily of trees and includes such well known producers of commercial timbers as the genera *Pinus* (pines), *Picea* (spruces), *Abies* (firs) and *Pseudotsuga* (Douglas fir).

The timber of the Coniferae is, in general, relatively light, of satisfactory strength in relation to weight, straight-grained, moderately soft and easy to work, machine and nail. In contrast, hardwoods as a group, and particularly the genus *Eucalyptus*, are heavy, strong, hard, not straight-grained and not readily nailed or worked by hand. Certain other properties, especially microscopic cell structure, result in softwoods seasoning much faster and more evenly than hardwoods. Because of these properties softwood sawnwood has a greater range of uses than *Eucalypt* sawnwood. Conifers also produce the bulk of the world's pulpwood although hardwood wood chips and woodpulp are now a significant feature of world trade in forest products.

### Timber resources, production and consumption

Compared with countries of the temperate regions in the northern hemisphere, the indigenous forest resources of Australia are markedly deficient in softwoods.

A Forestry and Timber Bureau estimate of the total volume of softwoods and hardwoods in the forests of Australia is set out below.

#### TIMBER CONTAINED IN AUSTRALIAN FORESTS AS AT 31 MARCH 1970

(Source: Forestry and Timber Bureau)

Type of timber	Volume of timber (Million m <sup>3</sup> true volume under bark)	Percentage of total timber
Hardwoods . . . . .	974.1	92.5
Softwoods . . . . .	79.1	7.5
<b>Total . . . . .</b>	<b>1,053.2</b>	<b>100.0</b>

In contrast to the above, the estimated supply (corresponding approximately to consumption) of sawn timber for the year 1970-71 is set out in the following table.

\* This section, outlining the growth and present extent of Australian softwood plantations, was prepared by the Forestry and Timber Bureau. The part dealing with Commonwealth loans to expand softwood plantations was contributed by the Department of the Treasury.

## ESTIMATED SUPPLY OF SAWN TIMBER, AUSTRALIA, 1970-71

(Source: Forestry and Timber Bureau)

Type of timber	Volume ('000 m <sup>3</sup> )	Percentage of total timber available
Hardwood timber—		
Australian production . . . . .	2,443	
Plus imports . . . . .	302	
Less exports . . . . .	21	
Total supply of hardwood timber . . . . .	2,724	65.45
Coniferous timber—		
Australian production . . . . .	769	
Plus imports . . . . .	673	
Less exports . . . . .	4	
Total supply of coniferous timber . . . . .	1,438	34.55
Total supply of all timber . . . . .	4,162	100.00

The trend of Australian softwood sawn timber production during recent years is given in the following table.

AUSTRALIAN SOFTWOOD SAWN TIMBER PRODUCTION, SELECTED YEARS  
1955-56 TO 1971-72

(Source: Forestry and Timber Bureau)

('000 m<sup>3</sup>)

	Rain forest species	Cypress pine	Plantation grown species	Total softwood
1955-56 . . . . .	91.2	173.9	382.3	647.3
1960-61 . . . . .	71.6	169.1	396.4	637.1
1965-66 . . . . .	53.8	148.1	586.2	788.1
1970-71 . . . . .	34.0	135.9	599.0	768.9
1971-72 . . . . .	36.8	145.8	634.3	816.9

Notable in the above table is the steady decline in the production of softwood species from the virgin rain forests of Queensland and northern New South Wales, and the striking increase in plantation grown timber. The latter is mainly *Pinus radiata*, but already includes a small amount of plantation grown hoop pine.

In the future, rain forest production will probably stabilise at a figure approximating yearly production in 1970, whereas plantation grown timber will increase considerably as a result of the harvesting of increased planting areas established under the Softwood Forestry Agreements Acts of 1967 and 1972 (See page 882 for further reference to these Acts).

## Early plantation, establishment in Australia

The first steps in the creation of government plantations in Australia were taken in 1870, most appropriately, by the State which had the poorest natural resources—South Australia. Planting commenced in 1876, and has continued without interruption ever since, though it was not until shortly before the 1914-18 war that appreciable areas were established each year. These very early plantings here and elsewhere provided valuable evidence in later years as to the suitability of various sites for *Pinus radiata* and other species. The commencement of plantings in South Australia also led to the formation of the Woods and Forests Department of that State, one of the oldest forest services in the British Commonwealth.

Under the aegis of Lands Departments and other State organisations, small plantations were established in other States, notably Victoria, shortly after that time, although it was not until much later that independent forest services were created.

## Commonwealth loans to expand softwood plantations.

Planting was continued at a steady rate between the two World Wars. After the Second World War, planting programs were re-commenced, but at a rate insufficient to provide Australia's future requirements for softwood.

In February 1965 the Australian Forestry Council recommended that the rate of expansion of softwood timber plantings in Australia should be increased from their existing level of about 40,000 acres a year to 75,000 acres a year for the next thirty-five years. The recommendations envisaged a phased increase in the rate of Government plantings by the various State Governments up to a level of some 63,000 acres per annum together with plantings by the Commonwealth in the Territories of 2,000 acres per annum, and an average of at least 10,000 acres per annum by private forest owners. The Council considered that such a program would make a major contribution towards meeting Australia's future requirements for softwood products.

In February 1966 the Commonwealth Government endorsed this recommendation and agreed, as a first step towards achieving the proposed annual target of 75,000 acres, to provide financial assistance to each State, over a five-year period commencing 1 July 1966, to enable them to accelerate their rate of softwood plantings. The assistance, which was provided to the States under section 96 of the Constitution, took the form of long-term loans repayable over twenty-five years with repayments of principal and the payment of interest commencing ten years after the date of each advance. The *Softwood Forestry Agreements Act* 1967 authorised the Commonwealth to enter into agreements with each of the States to provide financial assistance by way of loans during the financial years 1966-67 to 1970-71 inclusive.

In February 1969 the Australian Forestry Council recommended a continuation of Commonwealth financial assistance to the States for softwood timber planting for a further five-year period. The Commonwealth Government agreed in principle to the Australian Forestry Council's recommendations and following negotiations with the States it was agreed that the Commonwealth would assist towards a State planting program of 54,680 acres per annum. The *Softwood Forestry Agreements Act* 1972 authorised the Commonwealth to provide financial assistance to the States, by way of loans, during the financial years 1971-72 to 1975-76 inclusive. These loan funds are to be provided on the same terms and conditions as for the first program.

Payments under the two Acts by the Commonwealth to all States have been as follows: 1966-67, \$291,000; 1967-68, \$3,456,000; 1968-69, \$3,872,000; 1969-70, \$4,814,000; 1970-71, \$4,784,000; 1971-72, \$389,338; 1972-73 (estimated), \$9,100,000; 1973-74 (estimated), \$5,200,000. It is estimated that of the payment of \$9.1 million for 1972-73, \$4.1 million will be made available to cover expenditure incurred in 1971-72.

### Relative demand for softwood and hardwood

Because of the general suitability of softwood for many purposes it seems likely that the future demand for it will trend upwards until it reaches at least sixty per cent of total consumption. It is interesting to note that in South Australia, the only State which has significant home-grown softwood supplies in relation to population, softwoods at present comprise more than eighty per cent of the total sawn timber consumption. The present figure for Australia as a whole is approximately thirty-five per cent.

### Forestry and land utilisation

Many species of the genus *Pinus* can grow satisfactorily on relatively poor sandy soils with a mean annual rainfall which may be less than thirty inches. Under such conditions only the poorer types of eucalypts will grow and the mean annual increment in timber is very low, whereas with the pines it may average 4.67 cubic metres of timber in the ground per acre. Since land of the above type is usually not good enough for agriculture and only of moderate value for pasture, utilisation for softwood plantations may produce the greatest benefit to the nation. The main species of introduced pines now grown in Australia will grow to maturity within forty years, whereas the better types of eucalypts require double that length of time to mature and, unless on exceptionally favourable sites, do not produce as high a mean annual increment of timber.

### Adequacy of timber supplies

Since most of Australia's timber imports consist of softwoods a policy directed towards increasing self-sufficiency in timber supplies has been formulated, thus reducing foreign exchange requirements. The present target based on existing population projections is designed to achieve self-sufficiency by the year 2000. By this time a plantation resource of three million acres will be available, if the annual planting rate recommended by the Australian Forestry Council is maintained. The periodic re-examination of trends in timber usage in the future will enable the program to be modified as necessary to meet any revised targets.

### Extent of existing softwood plantations

The following tables outline the growth of Australian softwood plantations to 31 March 1972.

(a) Excludes firebreaks and other areas not actually forested.

The above table shows the predominance of *Pinus radiata* in all States except Queensland and Western Australia. This species is not climatically adapted to growing in the former State, where the native hoop pine is the most important plantation species, with slash pine (*Pinus elliotii* var. *elliottii*) in second place. The main species in Western Australia is maritime pine (*P. pinaster*), which is particularly adapted to growing on sandy soils too poor for the satisfactory growth of other species.

Private plantations have now assumed a position of importance in the softwood economy. The bulk of them comprise relatively large areas belonging to tree-planting or sawmilling companies, or to larger organisations in the pulp and paper industry. The first phase of extensive private planting was in South Australia and Victoria during the decade 1925–35, and these plantations now form the basis of expanding timber-using industries. The second phase began after the 1939–45 War, when the pulp and paper industry commenced planting on a fairly large scale in order to provide part of the raw material for its future requirements. Investment companies and companies engaged in forest products processing have also contributed to production in the private forestry sector.

**Types of softwood species used in plantations**

*Native species.* Hoop pine—*Araucaria cunninghamii*. Hoop pine is a high quality softwood. Where it occurs naturally in the rain forests, it attains very large dimensions, reaching 150 feet in height and

four feet or more in diameter. To grow hoop pine to this size in plantations would take too long, and a height of 100 feet and diameter of 20 inches is considered satisfactory for utilisation. On good sites this would require a rotation of fifty to sixty years.

All tests to date indicate that the rapid, controlled growth possible in plantations does not affect the quality of the wood in the case of hoop pine; in fact, the wood properties of rapidly grown plantation trees are equal to and sometimes superior to those of average wood from virgin forests. On the evidence available, branch size (with its effect on the knottiness of the timber) appears to be a factor that can be more readily influenced by genetic rather than silvicultural measures. The Forestry Department of Queensland is conducting research on this and other aspects of tree breeding.

The timber of hoop pine is in strong demand for most purposes where durability is not a prime consideration.

Bunya pine—*Araucaria bidwillii*. This species, which is closely related to hoop pine, is planted to only a limited extent on account of its slow growth. It is more heavily-branched and more difficult to establish than hoop pine.

#### *Exotic species*

Radiata pine—*Pinus radiata*. This pine was first introduced into Australia, as well as into New Zealand and South Africa, about a hundred years ago, and has become one of the most important softwood species. It is a native of the Monterey Peninsula in southern California, where it is of negligible importance. When it was introduced to countries overseas it frequently showed a far superior rate of growth and attained much greater dimensions than in its native habitat, with the result that one of its common names is "remarkable pine". Heights at twenty years of age may vary from sixty feet to over a hundred feet, and at maturity attain 130–140 feet. In Australia its planting is mainly restricted to the winter rainfall regions where the summers are dry and warm. Successful plantations have been established in south-eastern South Australia, southern Victoria, Tasmania, on the southern and central tablelands and the south-western foothills of New South Wales, and in the Australian Capital Territory. The mean annual increment of timber per acre varies from about 4.67 to 8.5 cubic metres in the round, true volume. Expressed in terms of a forty-year rotation, an average acre can be expected to produce a total volume of about 283 cubic metres including approximately 259 cubic metres of sawlogs and about 24 cubic metres of pulpwood or small case logs. The timber, like that of most species, needs to be mature, and requires careful milling and seasoning. Under these conditions it is at least equal in quality to red deal (the timber of *Pinus sylvestris*) which is one of the main building timbers of northern Europe.

Slash pine—*Pinus elliottii* var. *elliottii*. This species replaces *Pinus radiata* as the main exotic species in Queensland and in coastal New South Wales north of Newcastle, which are areas of summer rainfall. Slash pine is one of the main timber species of the southern States of the United States of America, and in that country it is used extensively for pulp, sawn timber and veneers. Thinnings from plantations in Queensland have yielded sawn timber of good quality and there is no reason to expect that the quality will be in any way inferior to that of timber in its natural habitat. The rotation will probably be much the same as for *P. radiata*—about forty years. Slash pine was first introduced into Queensland in 1925 and after 1930 began to play an important part in the planting program of the State.

Loblolly pine—*Pinus taeda*. This is another species from the southern and eastern parts of the United States of America, where it grows on a wide variety of soils and under a similar range of climatic conditions to slash pine. It is not generally quite as uniformly healthy and vigorous as slash pine, and for this reason has not been planted as extensively, though, if certain aspects of development can be controlled, it is likely to receive increased attention.

Maritime pine—*Pinus pinaster*. This is the most important exotic pine in Western Australia, where it grows on sandy soils which are too poor for satisfactory development of *P. radiata*. It is also used in similar areas in South Australia. Maritime pine is a native of the Mediterranean region and very large areas of it have been planted for sand dune control in Les Landes region of France.

Maritime pine does not attain a height comparable with *P. radiata*, eighty to ninety feet being common for well-grown mature trees, but diameters are relatively large. The timber is useful for a wide range of purposes.

*Pinus caribaea* var. *hondurensis*. Carribean pine is fast growing and of excellent form. Presently it is being planted in frost-free areas north of Brisbane where it could replace slash pine as the major exotic conifer in coastal areas.

*Callitris intratropica*. This tree is a member of the cypress family. It is one of the few species of tree which is resistant to the termites of the Northern Territory. *Callitris intratropica* is presently being planted at the rate of one thousand acres per year in the Northern Territory.

*Other species*

Interest in the past has been shown in Douglas fir (*Pseudotsuga menziesii*) in high rainfall areas of Victoria and southern New South Wales and limited areas of this species have been established. Canary Island pine (*P. Canariensis*) has been tried under conditions too hot and dry for most other exotic conifers. However, major developments in the future are likely to be in tree improvement within the major species rather than the introduction of new species or artificial hybrids.

The first seed orchard in Australia was planted in Queensland in 1953. The Australian forest services now have 1,200 acres of seed orchards available to them. Through controlled breeding programs, tree improvement can be made with respect to form, disease and drought resistance. Australia can expect to be self-sufficient in seed requirements for all major species by 1980.

### Forest administration and research

*Commonwealth Forestry and Timber Bureau.* The functions of the Commonwealth Forestry and Timber Bureau are laid down in the *Forestry and Timber Bureau Act 1930-1953* and include forestry research and education, the study of timber supply, and advice to the Government on forestry matters. The administering department is the Department of Primary Industry.

In 1961 the Commonwealth Government expanded its activities in forestry research in Australia. The existing Forestry and Timber Bureau Divisions of Silvicultural Research and Forest Management Research were combined to form the Forest Research Institute as a separate branch of the Bureau. The purpose of the Institute is to provide complete coverage in forestry research, ensuring that all problems of primary importance to the practice and development of forestry in Australia are investigated. In developing a program with this objective, the Institute takes account of the research activities and potential of the State forest services and other organisations. The research work carried out by the existing sections of the Forest Research Institute covers a wide range of studies, including the following: factors affecting tree growth, tree breeding, introduction of exotic species, forest nutrition, forest botany, forest entomology and pathology, fire protection, watershed management, forest mensuration, forest management and management economics, aerial inventory, biometrics, and tree seed. The Forest Research Institute maintains six regional establishments in the Commonwealth, two of which have an outstation in addition to the regional headquarters. These research stations are run on a co-operative basis with State forest services and private forest companies or other government instrumentalities.

The Forestry and Timber Bureau also maintains a Forest Resources Development Branch concerned with the compilation and analysis of statistics of production, consumption and trade in timber and other forest products. This Branch also carries out studies in forest economics and research into logging methods and machines. Advice on timber supply matters is currently made available to government departments and private enterprise. Research is also undertaken on matters associated with the marketing of timber products.

*Commonwealth Scientific and Industrial Research Organization.* The Divisions of Building Research and Applied Chemistry carry out a wide range of investigations relating to the properties of wood and the uses of wood and wood products. These activities were formerly carried out by the Division of Forest Products which, in May 1971, ceased to be a separate entity within C.S.I.R.O. following a reorganisation of C.S.I.R.O. research effort in the field of forest products. That part of the Division of Forest Products concerned with wood as a structural material was integrated with the Division of Building Research, and the remaining part, which was concerned with research for the paper and pulp industry, was integrated with the Division of Applied Chemistry. Most of the present forest products activities of both Divisions are conducted at premises in South Melbourne now known as the C.S.I.R.O. Forest Products Laboratory.

At the Forest Products Laboratory research work administered by the Division of Building Research is carried out by six separate Sections: Timber Physics, Timber Structures, Timber Engineering Science, Forest Conversion Engineering and Forest Conversion Science. In addition, the Division provides assistance to individuals and industry, administers courses of instruction on timber properties and usage, and maintains co-operative projects with overseas authorities operating in the same fields. The research sections working at the Laboratory as units of the Division of Applied Chemistry are Paper Science, and Wood and Forest Science.

*Forestry in the Territories.* Forestry activities in Papua New Guinea are controlled by the Administration through its Department of Forests. The management of forests in the Australian Capital Territory is the responsibility of the Forestry Branch of the Department of the Capital Territory.

The Forestry and Timber Bureau advises the Administrations of the Australian External Territories on the management of the forests in those Territories. Forests in the Northern Territory are under the control of the Forestry Branch of the Department of the Northern Territory.

*Forestry activities of the States.* Forestry on State-owned lands in the various States is the responsibility of the respective State Governments, but they do not exercise any control over forestry activities on private property. The powers and functions of State forest authorities are laid down under forest Acts and Regulations. In each State there is a department or commission to control and manage State forests. Its functions include the introduction of proper measures for the control and management of forest land; the protection of forest land; the conversion, marketing and economic utilisation of forest products; the securing of an adequate and permanent reservation of State forests; and the establishment and maintenance of coniferous forests to remedy the existing deficiency of conifers in Australia. All State forest services are actively engaged on research programs. Annual reports are issued by each State forest authority.

In addition to developing permanent forest reserves in each State, foresters are surveying all forested Crown lands with a view to obtaining dedications of new State forests to add to the permanent forest estate or to release for other uses areas unsuitable for forestry. State forest authorities control over 15 million acres of timber reserves, national parks, etc. They also usually control all timber on unoccupied Crown lands.

*Private forestry.* Privately owned lands contribute considerably to the total production from Australian forests. The most important areas of managed native forest in private ownership are the forests owned by pulp and paper companies. Schemes of financial assistance to individual land owners—designed primarily to encourage establishment and management of coniferous plantations—have been introduced by the Governments of New South Wales and Victoria.

The area of privately owned coniferous plantations is rapidly increasing, and here again the pulp and paper companies are very active. In step with the increase in afforestation programs, the number of professional foresters employed in private forestry enterprise is increasing, while several are engaged on research.

The area of coniferous plantations established by private companies and individuals is included in the table on page 883.

### **Forestry education**

The functions of the Australian Forestry School at Canberra, previously a division of the Forestry and Timber Bureau, were taken over by the Australian National University at the beginning of the 1965 academic year. The school was absorbed into the University's School of General Studies as the Department of Forestry. This Department provides a full four-year training leading to the degree of B.Sc. in forestry. The University of Melbourne also maintains a School of Forestry which gives training leading to a B.Sc. degree in forestry. The Universities in all States provide facilities for post-graduate studies leading to higher degrees for forestry graduates.

The Victorian Forests Commission maintains a Forestry School at Creswick where recruits are trained, mainly for employment in the Commission.

### **The Australian Forestry Council**

The Australian Forestry Council comprises the Ministers responsible for forestry in the six State Governments and the Commonwealth Government.

The Council is intended to provide the means for the mutual exchange between the State and Commonwealth Governments of information and views on forestry. It co-ordinates research into problems affecting the establishment, development, management, and fire protection of all forests, and the utilisation of forest products. It assists in co-ordinating the work of State and Commonwealth Governments and also private enterprise in the development of Australian forestry.

The Council is supported by a Standing Committee, consisting of the Director-General of the Forestry and Timber Bureau, the heads of each of the six State Forest Services, the Chief of the Division of Building Research, C.S.I.R.O., and the secretaries of the Commonwealth Departments responsible for forestry.

### **Fire protection**

The provision of adequate fire protection is one of the main problems facing forest and rural authorities. Government and private forestry organisations are responsible for the protection of about 47 million acres of forest land, of which a relatively accessible area of 23 million acres is

given a high degree of protection, about 17 million acres in the more inaccessible areas receive a lesser degree of protection, and about 7 million acres are at present not protected. Other extensive forest areas consisting mainly of vacant Crown land, but including land under private ownership or leasehold, are either not protected or are given some degree of fire protection by rural fire-fighting organisations or Government-financed fire protection associations.

During the 1971-72 fire season a total of 1,195 fires were recorded over the area of 40 million acres of forest land afforded either intensive or extensive protection by forest authorities. The area burnt by these fires totalled 457,280 acres or 1.1 per cent of the area protected.

The number of fires and the area of native forest burnt during the last ten years is shown in the following table.

#### NUMBER OF FIRES AND FOREST AREA BURNT, 1962-63 TO 1971-72

(Source: Forestry and Timber Bureau)

Year	Protected forest areas(a)		
	Number of fires	Forest area burnt	Percentage of forest area burnt
		'000 acres	
1962-63	1,299	275	0.7
1963-64	1,494	549	1.5
1964-65	2,307	1,626	4.1
1965-66	1,865	465	1.2
1966-67	1,422	388	1.0
1967-68	1,754	754	1.9
1968-69	2,165	1,885	4.7
1969-70	905	130	0.3
1970-71	1,018	176	0.4
1971-72	1,195	457	1.1

(a) The area receiving protection has been taken as the 40 million acres for which State forest services provide protection.

Very intensive fire protection is afforded to the coniferous plantation area of Australia. This area is increasing rapidly and the annual planting program is now between 60,000 and 70,000 acres. During the 1971-72 fire season a total of 313 acres was burnt, representing 0.03 per cent of the area of 1,059,000 acres for which fire statistics are available.

The area of coniferous plantations burnt during the past ten years is shown in the following table.

#### CONIFEROUS PLANTATIONS AREA BURNT AND TOTAL AREA, 1962-63 TO 1971-72

(Source: Forestry and Timber Bureau)

Year	Number of fires	Area burnt	Area of coniferous plantations(a)	Percentage of coniferous area burnt
		acres	acres	
1962-63	n.a.	475	492,000	0.10
1963-64		418	515,000	0.08
1964-65		3,130	556,000	0.56
1965-66		1,520	610,000	0.25
1966-67		461	660,835	0.07
1967-68	39	288	729,928	0.04
1968-69		2,247	781,000	0.29
1969-70		149	874,000	0.02
1970-71		1,404	993,000	0.14
1971-72		313	1,059,000	0.03

(a) This area does not include certain privately owned coniferous plantations for which fire statistics are not available. In 1969-70 the area for which no statistics were available was 105,000 acres; in 1970-71, 30,000 acres; and in 1971-72, 97,000 acres.

Detailed information on fire protection is given in Year Book No. 55, 1969, pages 966-7.

### Employment in forestry

In the following table details are shown of the number of persons employed by State forestry departments, the Department of the Northern Territory, the Forestry and Timber Bureau in the relevant States and Territories, and the private sector of the forestry industry at 30 June 1972. The table excludes staff of forestry training establishments.

(b) Staff engaged in felling, carting, etc. Includes direct employees only.

### Log sawmilling and veneer and plywood, etc., manufacturing activities

Selected details of the operations of establishments engaged in log sawmilling and the manufacture of plywood, etc., are set out in the tables below. These details were compiled from the annual censuses of Manufacturing for 1969-70 and 1971-72. For further details of the Manufacturing Census see Chapter 21, Manufacturing Industry. An annual Manufacturing Census was not conducted in respect of the year ended 30 June 1971.

<b>Local value of forest products(k)—</b>					
<i>Total</i> . . . „	109,759	110,344	117,797	128,960	139,332

(a) Excludes some production from private land, thought to be relatively small, details of which are not available.  
 (b) See footnote (b) to the table Forest Production: States and Territories, 1971-72 above. (c) Included in this category are amounts attributable to sawmillers who carry out their own logging activities as a secondary part of their operations. As such, the values are attributable to the sawmilling industry which is part of manufacturing industry. However, the amount has been included in this table so that the overall value of forest products might be shown. The amount in question is estimated to be \$26.1 million for 1968-69, or 28.9 per cent of the Australian total of \$90.3 million; and \$29.5 million in 1969-70, or 30.5 per cent of the total of \$96.6 million. An estimate of the amount for subsequent years is not available.  
 (d) Includes also sleepers, transoms, girders, bridge timbers, mining timber, poles, piles, etc. (e) Excludes value of timber used for tannin extract in Western Australia, which is not available for publication. (f) Includes value of 'Other forest products' for Tasmania. (g) Includes charcoal (forest production only), tanning bark, essential oils, eucalyptus leaves, crude rutin, etc. (h) Excludes value of sandalwood and substitutes in Western Australia, which is not available for publication. (i) Incomplete; figure for Tasmania included in value of 'Hewn and other timber'. (j) Includes value of timber used for tanning extract and sandalwood and substitutes in Western Australia. (k) Gross production valued at place of production. See footnote (b) to the above table.

## Timber and timber products

## Mill production of timber

Particulars of logs treated and the production of sawn, peeled and sliced timber by sawmills and other woodworking establishments are shown in the following table. The figures prior to 1968-69 have been compiled from annual factory collections, which cover virtually all sawmills. The only omissions are some small portable mills operated by itinerants, e.g. sleeper cutters. Figures for 1968-69 and 1969-70 are not strictly comparable with previous years because of changes in the census units and scope.

OUTPUT OF AUSTRALIAN-GROWN TIMBER: ALL MILLS  
STATES AND TERRITORIES, 1969-70(a)

('000 super ft)

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	A.C.T.	Aust.(a)
Sawn, peeled or sliced timber produced from logs—								
Broadleaved . . .	362,604	273,161	145,556	4,378	180,645	165,857	..	1,132,200
Coniferous . . .	77,707	40,425	65,509	106,549	7,920	4,576	(b)	302,687
<i>Total timber produced</i> .	440,311	313,585	211,065	110,927	188,566	170,433	(b)	1,434,887

(a) Nil production was recorded in the Northern Territory.

(b) Included in figure for New South Wales.

**OUTPUT OF AUSTRALIAN-GROWN TIMBER, ALL MILLS: AUSTRALIA(a)**  
**1965-66 TO 1969-70**  
('000 super ft)

	1965-66	1966-67	1967-68	1968-69	1969-70
<b>Logs treated—</b>					
Broadleaved(b) . . . . .	2,371,263	2,313,256	2,341,895	2,260,762	2,249,016
Coniferous(b) . . . . .	569,521	554,838	532,965	545,779	552,531
<b>Total logs treated(b) . . . . .</b>	<b>2,940,784</b>	<b>2,868,093</b>	<b>2,874,860</b>	<b>2,806,541</b>	<b>2,801,547</b>
<b>Sawn, peeled or sliced timber produced from logs above—</b>					
Broadleaved . . . . .	1,178,473	1,143,814	1,165,376	1,113,679	1,132,200
Coniferous . . . . .	329,532	317,591	307,684	295,594	302,687
<b>Total timber produced . . . . .</b>	<b>1,508,005</b>	<b>1,461,405</b>	<b>1,473,059</b>	<b>1,409,273</b>	<b>1,434,887</b>

(a) Excludes Australian Capital Territory and Northern Territory for years prior to 1968-69. (b) Gross hoppus basis: not necessarily comparable with details for years prior to 1965-66, which are generally on a true volume basis. Gross hoppus measure is approximately 78.5 per cent of the true volume.

In addition to the mill production of timber shown in the preceding tables, a large quantity of hewn and round timber, e.g. sleepers, piles, poles, fencing timber, timber used in mining and fuel, is obtained directly from forest and other areas. Information in respect of the value of this output may be found in the tables dealing with forest production on pages 889-90.

**Veneers, plywood, etc.**

Cutting of timber for the manufacture of veneers, plywood, etc., has been carried out in most States for a number of years. In recent years this has been considerably extended, since plywood manufacture has allowed the use of some species unsuitable for sawing. Special attention has been paid to ensure that logs suitable for peeling are diverted to ply factories.

**PLYWOOD PRODUCED: AUSTRALIA, 1965-66 TO 1969-70**  
('000 square feet:  $\frac{3}{16}$ -in. basis)

State	1965-66(a)	1966-67(a)	1967-68(a)	1968-69(b)	1969-70(b)
New South Wales . . . . .	(c)	58,791	64,903	71,083	79,249
Queensland . . . . .	(c)	(c)	(c)	85,396	100,402
Other States . . . . .	52,296	(c)	(c)	76,448	80,059
<b>Australia . . . . .</b>	<b>187,258</b>	<b>200,451</b>	<b>230,018</b>	<b>232,927</b>	<b>259,711</b>

(a) Excludes Australian Capital Territory and Northern Territory. (b) Includes Australian Capital Territory and Northern Territory. (c) Not available for publication.

Of the total plywood produced in 1969-70, 134,066,000 square feet ( $\frac{3}{16}$ -in. basis) were classed as 'Commercial', 96,555,000 as 'Waterproof', 6,821,000 as 'Case', and 22,269,038 as 'Sliced fancy'.

During 1969-70, 789.8 million square feet ( $\frac{1}{16}$ -in. basis) of veneers were produced by the rotary process for the manufacture of plywood. In addition, 71.9 million square feet of sliced veneers were produced.

### Manufactured boards

Particle board, resin or cement bonded of acoustic and other composition, amounted to 156,825,000 square feet during 1969-70.

### Woodchips

Woodchips are manufactured from sawmill waste and other timber otherwise of little or no commercial value. Their primary use is the production of wood pulp. The recently established woodchip industry in Australia at present produces only for export to Japan, although there are long-term plans for the Australian production and export of wood pulp made from woodchips.

There are four companies, three in Tasmania and one in New South Wales, which operate chipping mills and which have entered into agreements to export woodchips to Japanese pulp mills. The contract covering the export of woodchips from New South Wales, spanning a 20 year period, allows for an annual export of 610,000 tonnes of chips; the total quantity under contract being 3.4 million tonnes. Exports from Tasmania are covered by four contracts, ranging in length from 5½ to 15 years, and involving a total quantity of 22.2 million tonnes. The Tasmanian contracts involve annual shipments ranging from 310,000 to 710,000 tonnes. It is expected that by 1988, these four projects will export a total of 30 million tonnes of woodchips to Japan valued at about \$460 million. All four companies had commenced exports by 1972. Supplies of timber for chipping will come from State and privately owned forest lands, and from sawmill residues.

In addition to the above projects, a 15 year contract has recently been concluded between a Western Australian company and Japanese paper makers for the supply of up to 760,000 tonnes of woodchips per annum, valued in total at about \$200 million, from Western Australia.

### Wood pulp and paper

*Wood pulp.* During 1969-70 wood pulp production was 464,992 tons of chemical, mechanical and other pulp. During the previous year production was 403,907 tons.

Detailed information relating to the types and methods of production of wood pulp in the various States was published in Year Book No. 50, 1964, page 1110.

*Paper and paper board.* Paper and paper board are manufactured in all States but the greater part of the industry is in New South Wales, Victoria and Tasmania. A wide variety of paper and paper board is produced in Australian mills. The table below gives details of the production of some of the principal items.

#### PRODUCTION OF PAPER PRODUCTS: AUSTRALIA, 1968-69 TO 1971-72

(a) Excludes re-exports.

(b) Includes a value of \$3,000 for which no quantity has been included.

## CHAPTER 25

### FISHERIES

Further information on subjects dealt with in this chapter is contained in the annual mimeographed statistical bulletins *Fisheries* (10.8 and 10.9), particularly as regards types of fish, etc. caught.

#### Fisheries resources and their commercial exploitation

##### Fish

Approximately 2,000 species of marine and freshwater fish occur in and around Australia, about forty of which support substantial commercial fisheries. Most fishing is confined to waters over the continental shelf on the populous eastern and south-eastern seaboard, including Tasmania and South Australia, and off the south-western corner of the continent. As in other countries, fisheries in Australia may be divided into estuarine fisheries, located in the tidal waters of rivers and coastal lakes, beaches and bays; pelagic fisheries, which exploit species inhabiting the surface layers of the open ocean; and demersal fisheries, which fish the bottom layers of the sea. Estuarine fisheries produce considerable quantities of mullet (mainly *Mugil cephalus*), bream (*Acanthopagrus spp.*) and, in northern Australia, the valuable giant perch (*Lates calcarifer*). Important freshwater fisheries in New South Wales, Victoria and South Australia include those for Murray cod (*Maccullochella macquariensis*), golden perch (*Plectroplites ambiguus*) and eels (*Anguilla australis*). Rainbow trout are farmed in Tasmania. Important pelagic fisheries include those for Australian 'salmon' (*Arripis trutta*), southern bluefin tuna (*Thunnus maccoyii*), snoek (*Leionura atun*), mackerel (*Cybiium spp.*) and clupeoids (*Sardinops neopilchardus* and *Engraulis australis*). Demersal fisheries include those for snapper (*Chrysophrys auratus*), whiting (*Sillaginidae*) and from tropical waters the so called 'cods' (*Epinephelus*, etc.). Trawl fisheries off New South Wales and Victoria yield species such as flathead (*Neoplatycephalus* and *Trudis spp.*), morwong (*Nemadactylus spp.*) and John Dory (*Zeus faber*). The previously valuable fishery for edible school and gummy shark (*Galeorhinus australis* and *Mustelus antarcticus*) in south-eastern Australia has declined significantly in the year 1972-73 because of the discovery of a high mercury content in large school shark. A fishery for clupeoids in the Bass Strait which supplies the raw material for a fish meal plant at Lakes Entrance, Victoria, is the only 'industrial fishery' in Australia, but several exploratory purse seine ventures aimed at production of clupeoids have been established in south-eastern Australia recently.

##### Crustaceans

The western and southern rock lobsters (*Panulirus longipes cygnus* and *Jasus novaehollandiae*) which are taken on rocky reefs around the southern half of Australia, provide the most valuable fishery in Australia. Prawns (*Penaeus* and *Metapenaeus spp.*) are taken in estuarine, coastal and offshore waters of all States except Tasmania. This fishery has grown rapidly in recent years, especially in northern Australia. Bay lobsters (*Thenus spp.*) are taken incidentally to prawn trawling operations. Crabs (*Scylla* and *Portunus spp.*) are taken mainly in Queensland, New South Wales and Western Australia.

##### Molluscs (edible)

Naturally occurring oysters are harvested in all States; and in New South Wales and Queensland the Sydney rock oyster (*Crassostrea commercialis*) is cultured commercially. There is limited culture of the introduced Pacific oyster (*Crassostrea gigas*) in Tasmania and, recently, South Australia. Following a serious decline in catches in the scallop (*Pecten meriaionalis*) fishery based on stocks in Port Phillip Bay, Victoria, new offshore beds were located in southern New South Wales, eastern Victoria and south-western Western Australia. However, substantial fluctuations in abundance has resulted in erratic variation in production from year to year. A fishery based on the saucer scallop (*Amusium balloti*) developed, then declined, in another area of Western Australia, and there is a similar though more stable fishery in Queensland. An important abalone fishery has been developed since 1964 in south-east Australia with Tasmania, Victoria and South Australia providing the bulk of the catch. Mussels (*Mytilus planulatus*) are harvested in Victoria, and a fishery for squid has developed in the Derwent River estuary at Hobart in 1972-73. Other small quantities of cephalopods, mainly squid, are produced in many localities.

### Pearl-shell and trochus-shell

The shell of the Australian species of pearl oyster (*Pinctada maxima*) is taken from various localities in the tropical waters of Australia from Broome in Western Australia to Cairns in Queensland for the manufacture of buttons, knife handles, etc. Live pearl-shell is used for pearl culture, *Pinctada maxima* being capable of producing pearls which are the largest in the world and which command top market prices. Trochus-shell is found mainly on coral reefs off the Queensland coast, although small quantities occur in Western Australia.

### Whales

The Australian whaling industry formerly exploited the baleen (humpback) whales during their winter migrations along the east and west coasts of Australia. However, owing to the total prohibition placed on their capture by the International Whaling Commission in 1963, Australian whaling is now confined to the sperm whale (*Physeter catodon*) which has been taken in the southern waters of Western Australia since 1955. Processing operations were carried out by several shore stations, but now only one station at Albany, Western Australia, is still operating.

### Marine flora

The only substantial commercial collection of seaweed in Australia is undertaken at Triabunna, Tasmania, where a factory is processing seaweed (*Macrocystis pyrifera*) for its alginate content.

### General

A map showing Australia's principal ports and generalised localities of the fishery resources under exploitation appears on plate 49, page 898. Detailed information on the history of the development of fisheries industries in Australia is given in Year Book No. 55, pages 976-7.

## Fisheries administration and research

The Constitution of the Commonwealth (Section 51 (x)) assigns to the Commonwealth power to legislate for fisheries in Australian waters beyond territorial limits, the residual power in respect of waters within territorial limits (including inland waters) resting with the States. The Commonwealth has made similar arrangements for each of its Territories. Each State and Territory has legislation regulating fisheries in waters within its jurisdiction. Persons taking fish for sale, and their boats, are required to be licensed, and provision is made for management of the fisheries.

The Commonwealth laws regulating the fisheries are the *Fisheries Act* 1952-1970, the *Continental Shelf (Living Natural Resources) Act* 1968 and the *Whaling Act* 1960-1966. Each of these applies in accordance with the Commonwealth's fishery power under the Constitution.

### Fisheries Act

This Act requires persons engaging in fishing and boats used for fishing to be licensed and their equipment for taking fish to be registered if the purpose of the fishing is commercial. It also provides for management and conservation of the fisheries. The Act applies to Australian residents and their boats in waters proclaimed under the Act and, since 1968, to foreign boats and their crews in the zone of waters extending 12 miles from the baselines of the territorial sea but excluding waters within territorial limits, where State law applies.

### Continental Shelf (Living Natural Resources) Act

This Act implements in Australian law the sovereign rights, conferred on Australia in respect of the organisms belonging to sedentary species (that is, organisms which, at the harvestable stage, either are immobile on or under the seabed, or are unable to move except in constant physical contact with the seabed or the subsoil) on the continental shelf. The continental shelf comprises the seabed and subsoil of the submarine areas adjacent to the coast but outside the territorial sea to a depth of 200 metres, or beyond that depth where the depth of the superjacent waters admits of the exploitation of the natural resources of the area, by the Convention on the Continental Shelf, Geneva, 1958. The Act requires the licensing of persons searching for and taking sedentary organisms, of boats used to search for and take sedentary organisms, and of persons employing divers, trial divers and divers' tenders in taking sedentary organisms, if such activities are carried out in controlled areas of the continental shelf of Australia or the Territories for a commercial purpose. Provision is made for proclamation of sedentary organisms to which the Act applies, for the establishment of controlled areas of continental shelf in respect of specified sedentary organisms, and for the management and conservation of sedentary organisms in controlled areas (the last of these applying to all persons whether the purpose of the taking of the sedentary organism was commercial or not). The Act applies to all persons including foreigners, and to all boats including foreign boats.

### Whaling Act

This Act implements in Australian law the obligations imposed on Australia by virtue of our adherence to the International Convention for the Regulation of Whaling, Washington, 1946. The Act requires the licensing of factories engaged in treating whales and of ships (and aircraft) used for taking whales. It also provides for the management and conservation of whale stocks.

### Administration

Australian fisheries are administered by the authority having jurisdiction over the waters concerned. In inland waters and in waters within territorial limits, administration is the responsibility of the State or Territory fisheries authority. In proclaimed waters, and on the continental shelf beyond territorial limits, administration is the responsibility of the Commonwealth which, by agreement, has delegated to State fisheries authorities the necessary authorities for day-to-day administration of the Acts.

The administration of the fisheries is directed to a number of objectives, of which the two most important are conservation of the living resources in order to ensure their ability to sustain a maximum yield consistent with economy in their exploitation and the orderly conduct of the fishing industry. Fishery resources are common property and apart from fisheries such as those for rock lobster and abalone, where the numbers of boats and the quantities of fishing gear are controlled, the only other restrictions on the entry of boats into the Australian fishing industry are those relating to foreigners, and to processing and carrying boats in the northern prawn fishery. Management measures have been introduced in several fisheries to provide controls such as minimum sizes, closed areas, closed seasons and regulation of the types of fishing gear that may be used.

The Fisheries Development Trust Account (established under the *Fishing Industry Act* 1956) and the Fishing Industry Research Trust Account (established under the *Fishing Industry Research Act* 1969) are available to support financially, projects of kinds consistent with the purposes of those Acts for the development and management of the fisheries and fishing industry. The former is supported by the proceeds of the sale of the assets of the Australian Whaling Commission. The latter is a matching fund into which is paid each year an appropriation from Commonwealth Revenue equal to amounts collected from the fishing industry by the State Fisheries Authorities and expended by the States for the same purposes.

### Research

The main aim of fisheries research in Australia is to provide a background of biological, technical and economic information which will provide guidance for the efficient and rational utilisation of fisheries resources. To this end much of the research already undertaken has been directed at formulating recommendations for management of various fisheries. Research work is also carried out which is expected to lead to the development of new fisheries, the expansion of under-exploited fisheries, greater economy in operations and the use of more efficient equipment and methods.

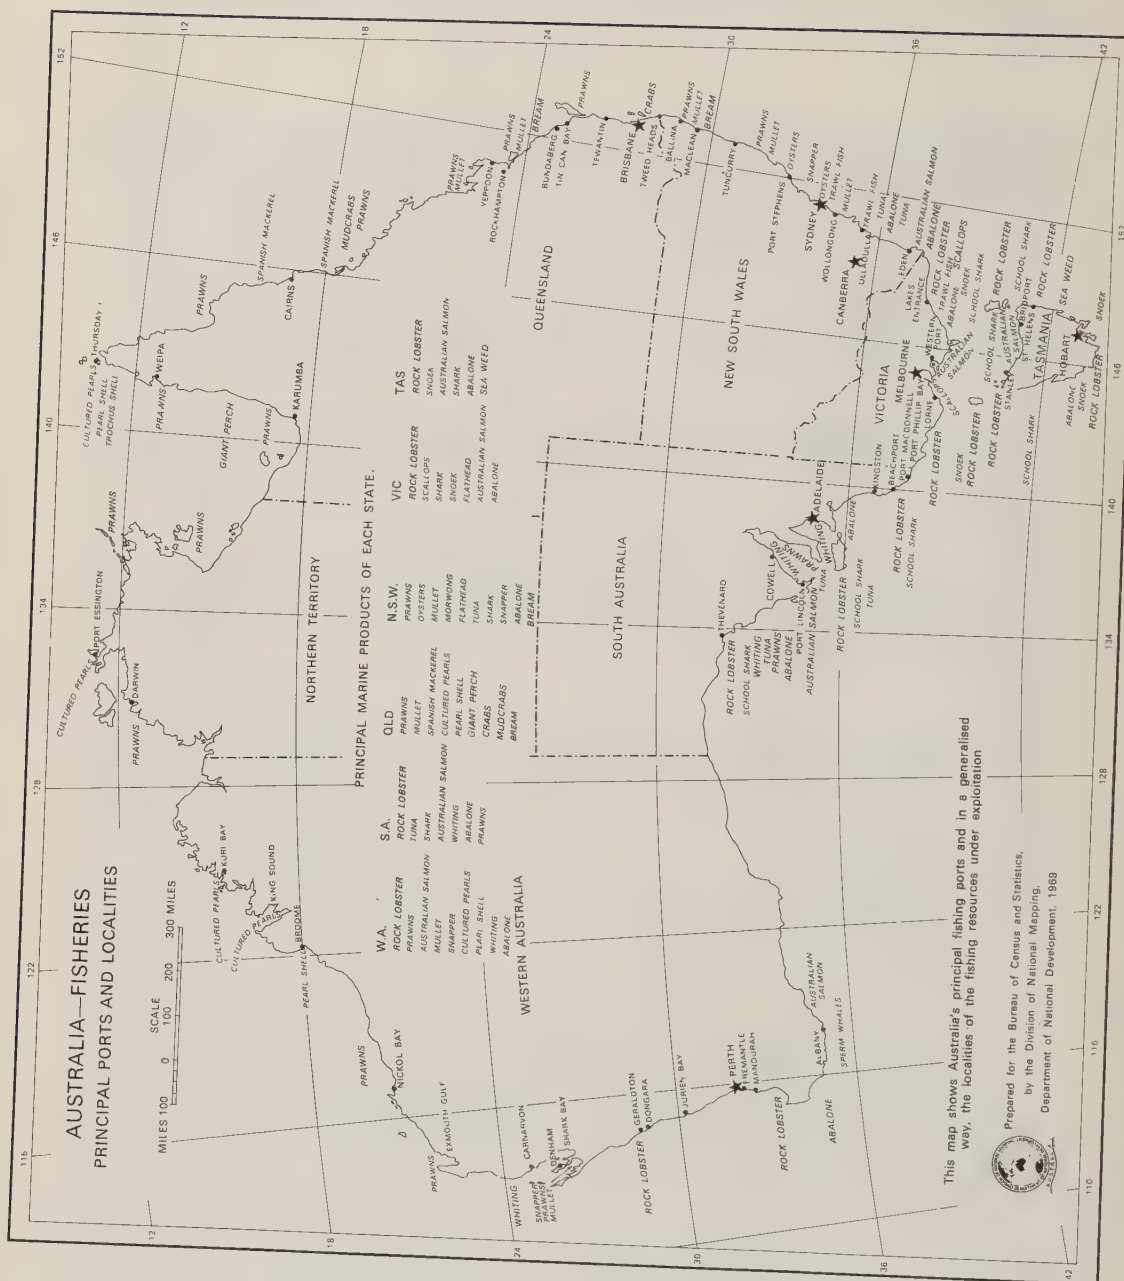

Organisations in Australia at present engaged in research into fisheries matters are:

- (i) C.S.I.R.O. Division of Fisheries and Oceanography, with its headquarters and main laboratory at Cronulla, N.S.W. (fisheries science and oceanography);
- (ii) C.S.I.R.O. Division of Food Research; main laboratories located at Ryde, N.S.W. (handling, storage, processing and transportation of fish);
- (iii) State fisheries departments (fisheries laboratories have been established in Perth, Hobart, Melbourne, Sydney and Brisbane; research vessels are operated by New South Wales, Victoria, Western Australia and Tasmania; the Department of the Northern Territory conducts a Prawn Research Unit in Darwin);
- (iv) Fisheries Division, Department of Primary Industry, Canberra (economic and management research, gear technology, extension and education service); and
- (v) private fishing companies (surveys of fisheries resources, research into handling and processing).

## Collection and presentation of fisheries statistics

### Source and basis of statistics

Statistics presented in this chapter have been collected by a number of authorities. The various State fisheries authorities have supplied, through the Deputy Commonwealth Statisticians in the States, the details of employment, boats, equipment, and production of the general fisheries. The Fisheries division of the Department of Primary Industry has supplied particulars of the whaling

industry and pearl-shell fishery. Statistics of the processing of general fisheries products and of overseas trade in the products of fishing and whaling have been compiled in the Commonwealth Bureau of Census and Statistics.

The statistics refer, in general, to financial years. However, statistics of pearl and trochus shell fishing, pearl culture operations and whaling refer to the season ended in the calendar year shown. For convenience of presentation, statistics of production of pearl and trochus shell have been assigned to financial years in the tables which follow. All overseas trade information refers to financial years.

In the preparation of Australian fisheries production statistics the quantities of individual products are generally in terms of the form in which they are taken from the water. For example, the statistics of fish production published in this chapter are in terms of 'estimated live weights' which are calculated from landed weights by using conversion factors for each species in each State. These conversion factors allow for the fact that the quantities of fish reported are frequently in a gutted, headed and gutted, or otherwise reduced condition. Crustaceans are reported on an 'estimated live weight' basis and molluscs (edible) on a 'gross (in-shell) weight' basis. The figures of pearl-shell and trochus-shell refer to the actual quantities of dry shell for sale and exclude the weight of the fish.

## Boats and equipment used in fisheries

### Fish, crustaceans and molluscs (edible)

The boats used for the estuarine fisheries are mostly small vessels, propelled by diesel or petrol engines of low power. The offshore vessels range up to 120 feet in length and are almost invariably powered by diesel engines. Most of them have either insulated holds and carry ice, or are equipped with dry or brine refrigeration. Some rock lobster vessels are fitted with wells in which the catch is kept alive. About 25 per cent of the vessels registered in Australia for commercial fishing are over 30 feet in length. Recently, a number of well equipped, double rigged, prawn trawlers of 60 feet to 85 feet in length with large refrigeration capacity have been built for the rapidly developing northern prawn fisheries.

The following are the types of equipment most commonly used in the main fisheries: *mullet*, beach seine, gill net; *shark (edible)*, long-lines, gill net; *Australian Salmon*, beach seine; *snoek*, trolling lines; *flathead*, Danish seine, otter trawl; *snapper*, long-lines, traps, gill net, hand-line; *morwong*, Danish seine, otter trawl, traps; *whiting*, handlines, Danish seine, beach seine, gill net; *garfish*, beach seine; *mackerel*, trolling lines; *tuna*, pole and live-bait, trolling lines (lampara nets and purse seines are used for taking live bait for tuna); *prawns*, otter trawl, beam trawl, beach seine net; *rock lobster*, pots, traps; *scallops*, dredge, otter trawl; *abalone*, diving using hookah gear; and *pilchards*, *anchovies*, *jack mackerel*, and some *tuna*, purse seine.

### Pearls, pearl-shell and trochus-shell

Ketch-rigged luggers about fifty-five feet long which carry crews of eight to fourteen members are used for pearl-shell fishing in northern Australia.

### Whaling

The whaling industry is highly mechanised. Standard equipment includes aircraft to locate whales, diesel-powered catchers of about 100 to 125 feet in length, and tow boats.

### Boats and equipment employed by industry

The following two tables show details of boats and equipment employed in the taking of fish, crustaceans and edible molluscs, pearl-shell and trochus-shell, and the number of chasers and stations engaged in whaling operations. The reservations mentioned below regarding the use of employment information are also applicable to these tables. Boats employed in more than one industry are classified to their main activity.

## Employment in fisheries

### Classification of registered commercial fishermen by industry

The following two tables are derived mainly from the licensing records of the various State fisheries authorities. Because the definitions and licensing procedures used by these authorities are not uniform the statistics should not be used to compare the relative productivities of fishing industries in the various States. Persons engaged in more than one industry are classified according to their main activity, and so may be classified differently from one year to the next.

### PERSONS EMPLOYED ON FISHING BOATS: STATES AND NORTHERN TERRITORY 1971-72(a)

<i>Industry</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>Aust.</i>
General fisheries . . . . .	4,545	1,534	3,595	(b)3,014	3,167	1,207	532	17,594
Edible oyster fisheries . . . . .	1,400	..	n.a.	..	2	n.a.	..	(c)1,402

<b>Whaling(d)—</b>								
At sea . . . . .	..	..	..	..	51	..	..	51

(a) For all States except Western Australia, the figures for general fisheries refer to number of persons (including skippers) reported as usually employed on boats. Persons reported as usually employed on more than one boat for a particular year are counted more than once for that year. For Western Australia, the figure for general fisheries refers to number of licensed commercial fishermen. (b) Reduction compared with 1970-71 figure caused by adoption of new definition of persons engaged in South Australia. (c) Incomplete; excludes Queensland and Tasmania. (d) Source: Department of Primary Industry.

## PERSONS EMPLOYED ON FISHING BOATS: AUSTRALIA, 1967-68 TO 1971-72(a)

Industry	1967-68	1968-69	1969-70	1970-71	1971-72
General fisheries(b)	14,965	16,460	15,629	16,279	17,594
Edible oyster fisheries	(c)1,319	(c)1,425	(c)1,717	(c)1,596	(d)1,402

Whaling(e)—					
At sea	45	48	51	51	51

(a) See footnote (a) to the table 'Persons Employed on Fishing Boats: States and Northern Territory 1971-72' above.  
 (b) Breaks in comparability of figures in this series occur in 1969-70 and 1971-72, due to changes in basis of counting in South Australia. (c) Incomplete; figure for Tasmania is not available. (d) Incomplete; excludes Queensland and Tasmania. (e) Source: Department of Primary Industry.

## Production, processing and domestic marketing of fisheries products

## Value of fisheries production

The following table shows the gross value and local value of fishing and whaling production by States. Because the value of materials used in the course of production is not available for all States it is not possible to show a comparison of net values. (See also the chapter Miscellaneous for an explanation of the value terms used.)

 FISHERIES: GROSS AND LOCAL VALUE OF PRODUCTION  
 STATES AND NORTHERN TERRITORY, 1967-68 TO 1971-72  
 (\$'000)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.

### Whales

**WHALES TAKEN(a): AUSTRALIA, 1968 TO 1972**

(Source: Department of Primary Industry)

(Number)

	1968	1969	1970	1971	1972
Male . . . . .	585	637	775	820	792
Female . . . . .	73	42	24	40	161
<b>Total . . . . .</b>	<b>658</b>	<b>679</b>	<b>799</b>	<b>860</b>	<b>953</b>

(a) Sperm whales only were taken.

### Processing of fish, crustaceans and molluscs

Ice is extensively used for the chilling of fish taken in estuarine and inshore fisheries. Refrigeration is used particularly on vessels operating in the tuna fishery and prawn fisheries to chill or freeze the catch. Refrigerated brine tanks are most commonly used.

Processing plants are located strategically throughout Australia close to fishing grounds. In recent years a number of shore-based plants have been established in remote areas of northern Australia to service the expansion of the prawn fishery. Processing vessels receiving prawns from a fleet of trawlers are also operating in this fishery.

Rock lobsters, prawns and scallops are frozen for export; tuna, snoek, Australian salmon and abalone are canned; small amounts of fish are smoked; some molluscs are bottled. Hand labour is still used extensively in processing operations, but mechanisation is being progressively introduced.

Fish, crustaceans and molluscs intended for export are processed in establishments registered under the Export (Fish) Regulations. Edible fish for local consumption is mainly dispatched fresh iced to markets. A survey of the Australian seafood processing industry was published by the Department of Trade and Industry in 1971.

## FISH PROCESSING (EXCEPT FREEZING): AUSTRALIA, 1967-68 TO 1971-72

(tonnes)

	1967-68	1968-69	1969-70	1970-71	1971-72
Fish used(a)—					
Whole . . . . .	10,952	11,486	11,182	8,707	10,893
Headed and or gutted . . . . .	3,549	2,350	2,246	1,393	1,473

Total value of products . . . . .	„	748	956	1,563	1,943	1,578

(a) 6 barrels = approximately 1.016 tonnes.

## Domestic marketing of fisheries products

Although virtually the whole of the tuna and Australian salmon catches and a large proportion of the snook catch are canned, the greater part of Australian fish production is marketed fresh or frozen.

Marketing arrangements for fresh fish vary. In New South Wales fish marketing is the responsibility of the Fish Marketing Authority, which operates the Metropolitan and Wollongong Fish Markets. In other coastal centres of New South Wales fishermen's co-operatives may become registered as local fish markets. In Queensland the Fish Board sells all production on behalf of fishermen in that State, except fish intended for export and interstate trade. In Victoria, South Australia, Western Australia and Tasmania there is no restriction on market outlets. In South Australia the majority of fishermen are members of the South Australian Fishermen's Co-operative Ltd, which handles the whole of their production. Other outlets for fish products include retail and catering establishments.

## Consumption of edible fisheries products

Particulars of the estimated supplies of fish, crustaceans and molluscs available for consumption per head of population, in terms of edible weight, are included in the following table. For the purpose of compiling this table, an allowance has been made for the non-commercial fish catch.

**FISHERIES PRODUCTS: ESTIMATED SUPPLIES AVAILABLE FOR CONSUMPTION  
AUSTRALIA, 1967-68 TO 1971-72**  
(kg edible weight per head per annum)

## CHAPTER 26

### MINERAL INDUSTRY

Further detailed statistics and information on the subjects dealt with in this chapter are contained in the annual printed bulletin *The Australian Mineral Industry—Annual Review* and other publications issued by the Bureau of Mineral Resources, Geology and Geophysics, which also issues, in conjunction with this Bureau, a quarterly publication, *The Australian Mineral Industry* (10.17), comprising two parts—Part 1—Quarterly Review and Part 2—Quarterly Statistics. The annual statistical bulletins *Mining Establishments, Summary of Operations* (10.55), *Mining Establishments* (10.60), *Mineral Production* (10.51), *Mineral Exploration* (10.41), and *Overseas Participation in Australian Mining Industry* (10.42) of this Bureau contain economic statistics of the industry prepared and published as soon as possible after the data have been compiled. A monthly statistical bulletin *Minerals and Mineral Products* (10.19) is issued also, and other current statistics on mining or mine products are contained in the *Quarterly Summary of Australian Statistics* (1.3), the *Monthly Review of Business Statistics* (1.4), the *Digest of Current Economic Statistics* (1.5), and the *Monthly Bulletin of Production Statistics* (12.14).

*All quantity data in this chapter are quoted in imperial units throughout the text and metric units within statistical tables except where otherwise indicated.*

#### GENERAL

##### Geology

###### General geology

Most of the western and central part of the Australian continent consists of basement rocks of Precambrian age. Younger Palaeozoic rocks, mostly of geosynclinal origin, form a discontinuous belt several hundred miles wide extending from north Queensland to Tasmania. Mesozoic platform sediments form a broad zone separating the Palaeozoic and Precambrian rocks and extending from the Gulf of Carpentaria to central New South Wales. Cainozoic rocks occur mainly in Victoria, south-western New South Wales and southern South Australia, and as residual basalt cappings over extensive areas of the Palaeozoic rocks of eastern Australia.

###### Economic geology

Minerals of economic significance occur widely throughout the Precambrian and Palaeozoic rocks of the continent. Palaeozoic mineralisation is perhaps more varied, but the Palaeozoic deposits now being worked are in general smaller than those found in Precambrian rocks. Most of Australia's metallic mineral deposits occur within two broad regions, a region of Precambrian rocks in the west and central areas of the continent and a region of younger Palaeozoic rocks in the east.

The major deposits of metallic ore minerals, including those of iron, lead, zinc, silver, copper, uranium, nickel, and gold, are contained in the Precambrian rocks of the Australian shield. Smaller deposits of ores of tin, tungsten, tantalum, beryllium, manganese, cobalt, and mica are also contained in these rocks.

The mineralised Palaeozoic rocks contain major deposits of gold, now mostly worked out, and a few large copper and lead-zinc-silver ore occurrences. Smaller amounts of ores of tin, tungsten, molybdenum, bismuth, antimony, and ores of other metals also occur in these rocks.

Outside these two main categories, however, there are some metallic mineral deposits of considerable economic importance which were formed during the Tertiary Period. These include bauxite (the ore of aluminium) which occurs as a surface capping over rocks of various ages. Extensive deposits of bauxite occur at Weipa on Cape York peninsula in north Queensland, at Gove on the north-eastern tip of the Northern Territory, in the Darling Range in Western Australia, and near Kalumburu in the north-west of Western Australia. These deposits are the result of a long period of weathering and reworking.

Other important deposits which are the results of weathering are the lateritic nickel deposits at Greenvale and Rockhampton in Queensland, and in the Kalgoorlie and Wingellina areas of Western Australia. Mineral sands, another important exception, contain rutile and ilmenite (ores of titanium), zircon (zirconium ore), monazite (thorium ore), and other minerals, and are particularly well developed on the central and northern New South Wales coast, southern Queensland and south-western Western Australia. The deposits of the eastern States are considered to be final derivatives of Mesozoic rocks. The Western Australian deposits are thought to be derivatives of the Precambrian granites of the Australian shield.

Occurrences of fuel minerals (coal, oil and natural gas) are characteristically located in former sedimentary basins. Large areas of Australia are covered by these basins, and more than twenty major sedimentary basins have been identified on the Australian mainland. In addition, sedimentary basins are known to exist in off-shore areas adjacent to the Australian coast. The individual basins range in area from 4,000 to 680,000 square miles and contain marine and continental sedimentary rocks ranging in maximum thickness from 1,000 to about 30,000 feet and including rocks of all ages from Proterozoic to Tertiary.

The main Australian deposits of black coal are in eastern Queensland and New South Wales. Most are Permian in age, and they predominantly have a bituminous rank; both coking and non-coking types occur. The extensive brown coal deposits of Victoria were formed during the Tertiary Period and are used to produce electricity for that State.

Crude oil and natural gas have been found in a number of sedimentary basins. In the Bowen-Surat Basin, Queensland, commercial deposits of oil exist at the Moonie, Alton, Bennett and Major fields, and commercial deposits of natural gas exist in the Roma, Surat and Rolleston areas. Gas from the Roma area is used to supply Brisbane. Gas reserves are present in the Adavale Basin at Gilmore, and in a dozen or so accumulations in the Cooper Basin which extends from South Australia into Queensland and the Northern Territory. In general the oil reservoir rocks in Queensland are of Lower Jurassic age, and the gas reservoir rocks are of Mesozoic and Permian age. In the Gippsland Basin, off-shore from Victoria in Bass Strait, oil in commercial quantities was discovered in the Kingfish, Halibut, Tuna, Barracouta and the Mackerel field and commercial natural gas in the Marlin, Barracouta, Snapper and Tuna fields. Cretaceous and Tertiary strata are the reservoir rocks. Eastern Victoria and Melbourne are now supplied with gas from Marlin and Barracouta fields. Oil is being piped from Kingfish, Halibut and Barracouta. In the Cooper Basin, South Australia, commercial deposits of natural gas were discovered at Gidgealpa, Moomba, Daralingie, Toolachee, Merrimelia, Della, Strzelecki, Mudrangie, Moorari, Coonatie, Fly Lake, Big Lake, Dullingari, Brumby, Kanowana and Burke and gas and oil at Tirrawarra, Moorari, Fly Lake and Brolga. The reservoir rocks are of Permian age and plans to supply Sydney and some large towns in New South Wales with gas from the Cooper Basin in 1974 are well advanced. In the Carnarvon Basin, Western Australia, commercial crude oil mainly in the Cretaceous formations, and also to a lesser degree in the Jurassic, is being produced from Barrow Island. Off-shore, on the northwest continental shelf, major gas deposits have been discovered at Scott Reef, Rankin, Goodwyn, Angel, North Rankin and Eaglehawk; oil was discovered at Rankin, Legendre, Madeleine, Eaglehawk and Goodwyn which are at present non-commercial. Further south, onshore in the Perth Basin, natural gas in commercially significant quantities was discovered in the Yardarino, Gingin, Dongara, Mondarra and Walyering areas, the reservoir rocks being of Lower Jurassic, Lower Triassic and Permian ages. Perth is now supplied with natural gas from the Dongara, Mondarra and Gingin fields and this will also be piped to the large towns. In the off-shore Bonaparte Gulf Basin high pressure natural gas was encountered at the Petrel and Tern prospects. In the Amadeus Basin, Northern Territory, natural gas was discovered in commercial quantities in formations of Ordovician age at Mereenie and Palm Valley. These are not yet being exploited but several proposals are under consideration. The gas accumulation in the Mereenie Anticline is underlain by the oil column in the same Pacoota Sandstone reservoir.

The most important non-metallic minerals are asbestos, clays, sand and gravel, limestone, gypsum, and silica. Salt won by evaporation of sea water is another important product.

Opals are found in the flat-lying sedimentary beds of the Great Artesian Basin in Queensland, New South Wales and South Australia and were formed during the Tertiary Period.

A table showing most of the larger mineral deposits now being mined in Australia according to the age of the geological formation in which they are found is shown in Year Book No. 53, page 1062.

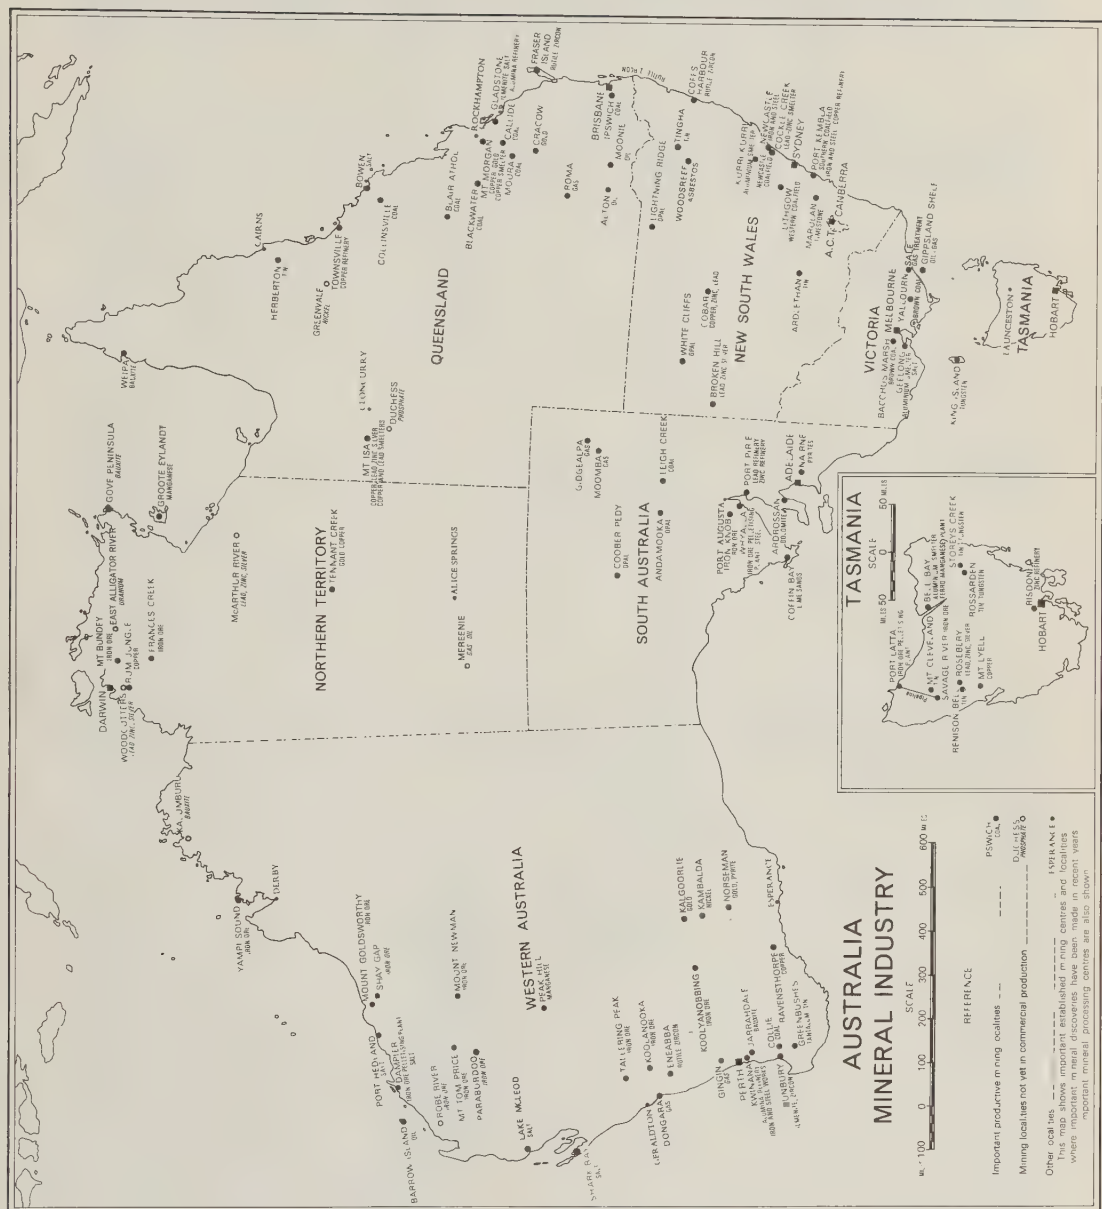

PLATE 50

### Mineral resources

Australia is self-sufficient in most minerals of economic importance and much more than self-sufficient in some. The following table summarises, in a general way, known reserves and production of the principal metals and minerals in relation to Australian consumption of these commodities and present export availability. Many qualifications are necessary to a simple summary of this kind, and the table should be read in conjunction with the following detailed notes on principal minerals.

#### RESERVES OF MINERALS: AUSTRALIA

(Source: Bureau of Mineral Resources, Geology and Geophysics)

<i>Production</i>	<i>Reserves adequate</i>	<i>Reserves uncertain</i>	<i>Reserves negligible</i>
Production sufficient for domestic demand and exports	Asbestos (chrysotile) Barite Bauxite Bismuth Cadmium Coal (black) Copper Gold Gypsum Iron ore Lead Manganese ore (metallurgical) Mineral sands(a) Natural gas Nickel Opal Salt Silver Tin Tungsten Zinc	Antimony Beryl Glass sands Talc Tantalite	
Production sufficient for domestic demand	Clays (except light grade china clay) Coal (brown) Dolomite Felspar Limestone	Sillimanite	
Production not sufficient for domestic demand	Lithium minerals Phosphate rock Sulphides (as source of sulphur)	Abrasives Arsenic Bentonite China clay Chromite Cobalt Crude oil Diatomite Fluorite Magnesite Manganese ore (chemical) Mercury Mineral pigments Molybdenum Platinum	
Production nil	Magnesium Potassium salts Vanadium	Asbestos (crocidolite) Diamonds Graphite Vermiculite	Borates Nitrates Sulphur

(a) Ilmenite, monazite, rutile, zircon.

### Individual minerals

**Bauxite.** As a result of discoveries at Weipa, Queensland, Gove, Northern Territory, and in the Darling Range and Kimberley area in Western Australia, Australia's reserves of bauxite are known to be very large, perhaps the largest in the world. Total reserves in the Weipa area are believed to be in excess of 3,000 million tons, while proved reserves at Gove are reported to contain 250 million tons of bauxite. In the Darling Range, reserves of economic grade bauxite are estimated to be about 1,000 million tons spread over several locations. Another significant deposit of over 200 million tons has been proved in the Mitchell Plateau area in the Kimberley District of Western Australia.

**Coal.** Australia has coal resources of all types adequate to provide for future domestic requirements and a substantial export surplus. Australia's coal reserves are concentrated mainly in the mainland eastern States. The bituminous coal is located mainly in New South Wales and Queensland; Victoria has very substantial brown coal reserves in the Latrobe Valley. The value of coal production is second only to iron ore, as is the value of coal exports. An inventory of Australian coal resources at December 1970 was published in September 1971 by the Bureau of Mineral Resources in the *Australian Mineral Industry—Quarterly Review* vol. 23, no. 4.

**Copper.** The principal deposit of this metal is at Mount Isa, Queensland where ore reserves were estimated at 140 million tons in 1972. Other important deposits are situated at Cobar, New South Wales, Mount Morgan and Gunpowder, Queensland. Mount Lyell, Tasmania, Kanmantoo, South Australia, Tennant Creek, Northern Territory and Tarago, New South Wales.

**Crude oil.** Recent exploration and development activity indicates that Australia has significant reserves of crude oil and that additional reserves may be discovered in the near future as exploration activity finds further drilling prospects, particularly in the off-shore areas. The Moonie and Alton fields in Queensland, and the Barrow Island field in Western Australia have been producing since 1964, 1966 and 1966 respectively. The Barracouta, Halibut and Kingfish fields in the Gippsland Shelf area off-shore from Victoria commenced production in 1969, 1970 and 1971 respectively. At the end of 1972, proved reserves in Australia were estimated to be 1,536 million barrels and the recent discoveries indicate the possibility of an upward revision of this figure in the near future.

**Gold.** Australia's gold resources are heavily concentrated in Western Australia, mainly in the Kalgoorlie-Coolgardie area, but small deposits of gold-bearing ore occur in all States. In addition, gold is commonly obtained as a by-product of other mining activities, particularly copper mining. Economic gold ore reserves at Kalgoorlie were estimated at 4.8 million tons in late 1972.

**Iron ore.** Very extensive deposits of iron ore have been discovered, establishing Australia as one of the most important iron ore provinces in the world. The largest deposits are located in the Hamersley and Ophthalmia Ranges in the Pilbara region of north-west Western Australia. Other commercially important deposits of iron ore are situated in the Savage River area of Tasmania, in the Middleback Ranges of South Australia, in the Mount Goldsworthy, Yampi Sound, Koolyanobbing, and Weld Range areas in Western Australia, and at Frances Creek in the Northern Territory. These deposits are adequate to supply the estimated needs of the Australian iron and steel industry far into the future, as well as providing a large export availability. Total Australian reserves with an iron content greater than 55 per cent are estimated to be at least 20,000 million tons.

**Lead-zinc.** Australia has been a major producer of lead and zinc since the discovery of ore at Broken Hill, New South Wales in 1883. Measured reserves of lead-zinc ore at Broken Hill are currently 6 million tons assaying 11.7 per cent lead and 9.8 per cent zinc; 6.7 million tons assaying 9.3 per cent lead, of which 6.2 million tons also assays 14 per cent zinc and, 4.5 million tons assaying 13.1 per cent lead and 10 per cent zinc. Reserves at another major producing mine, Mount Isa in Queensland, are 56 million tons assaying 7 per cent lead and 6 per cent zinc. Preparations are now being made to start production from a new mine, the Hilton, near Mount Isa with reserves of 35.0 million tons of ore, assaying 8 per cent lead and 10 per cent zinc. The capacity of the mine at Rosebery in Tasmania (reserves of 9.5 million tons, 6 per cent lead and 17 per cent zinc) is being increased. Development of the McArthur River deposit in Northern Territory (reserves of 200 million tons, 4 per cent lead and 9 per cent zinc) is dependent on the solution of complex metallurgical problems. A deposit discovered near Tarago, near Goulburn, N.S.W. will commence production in 1976; reserves are estimated at 7 million tons assaying 3.3 per cent lead, 9.4 per cent zinc and 2.9 per cent copper. Lead and zinc concentrates are being produced with copper concentrates at Cobar, New South Wales.

**Manganese.** Australia's known reserves of manganese, which is highly important for the iron and steel industry, are in excess of domestic requirements, and exports have continued at a high level. The principal deposits currently being worked are in the Pilbara area of Western Australia and on Groote Eylandt in the Gulf of Carpentaria. Reserves on Groote Eylandt are substantial and supplied 90 per cent of Australian production in 1971.

**Mineral sands.** Ores of titanium (rutile and ilmenite), zirconium (zircon) and thorium (monazite) occur in mineral sands over extensive areas of the north and central coasts of New South Wales, the

south and central coasts of Queensland, and the south-western coast of Western Australia and at Eneabba, 170 miles north of Perth. Resources are large by world standards and easily workable. Australia's reserves of rutile and zircon represent a large proportion of the world's reserves of these minerals. In 1971 Australia was responsible for about 95 per cent of the world's supplies of rutile, 87 per cent of zircon, 50 per cent of monazite and 25 per cent of ilmenite.

*Natural gas.* Significant discoveries of natural gas have been made throughout Australia, the most notable being the Barracouta, Marlin, and Snapper fields; Gippsland shelf combined reserves are 10 million million cubic feet. About 20 fields in the Cooper Basin in South Australia have total recoverable reserves in excess of 3.4 million million cubic feet, and numerous small fields in the Roma, Surat and Rolleston areas in Queensland have combined reserves of 212 thousand million cubic feet. Commercial production is being undertaken from the Barracouta, Marlin, Gidgealpa, Moomba, Dongara, Mondarra and Roma fields. Reserves in the Dongara, Mondarra, Walyering, Gingin and Yardarino gasfields in Western Australia are about 500 thousand million cubic feet. Total daily gas production at the end of 1972 was of the order of 314 million cubic feet. Reserves of 1.6 million million cubic feet at Mereenie and Palm Valley in the Northern Territory are not yet being exploited. Large reserves of natural gas discovered on the north west continental shelf at Petrel, Scott Reef, North Rankin, Rankin, Angel, Goodwyn and Eaglehawk are estimated to contain in excess of 20 million million cubic feet. At the end of 1972, the total reserves of natural gas in Australia were estimated at about 40 million million cubic feet.

*Natural gas liquids.* The production of natural gas liquids in association with natural gas is becoming an important facet of Australian petroleum production. Natural gas liquids, also known as condensate, are produced in association with gas from the Barracouta, Marlin, Gidgealpa, Moomba and Dongara/Mondarra fields and to a lesser degree at Roma. Natural gas liquids from Barracouta and Marlin are separated from the gas at the Longford gas and crude oil stabilisation plant and piped to Westernport Bay for shipment to local and export markets. A liquids pipeline from the Gidgealpa-Moomba gasfield to Adelaide is planned. The liquids produced at Roma, because of their small quantity, are mainly used as a fuel on the producing fields. The condensate content of Northwest Shelf gas is generally higher than that of other Australian gas. At the end of 1972, reserves of natural gas liquids in Australia, were estimated to be in excess of 620 million barrels.

*Nickel.* In the Kalgoorlie-Widgiemooltha area of Western Australia more than 21 nickel sulphide ore bodies have been found since the original discovery of nickel ores was made at Kambalda in 1966. Total ore reserves in the Kalgoorlie area are more than 27 million tons, averaging 3.0 per cent nickel. Other large but low-grade ore bodies have been found between Leonora and Wiluna; the largest of these is Mount Keith where ore reserves are estimated to be 330 million tons averaging 0.6 per cent nickel. In the Leonora-Wiluna area at Agnew the ore body is estimated to contain at least 33 million tons of ore averaging 2.2 per cent nickel.

A nickel refinery has been built at Kwinana, Western Australia, with an annual capacity of 15,000 tons which is expected to be expanded to 20,000 tons. A smelter built at Kalgoorlie with an annual capacity of 200,000 tons of nickel concentrate commenced operation in 1973.

Lateritic nickel deposits have been discovered at Greenvale in Queensland where production is expected to commence in 1974. Other large, but at present uneconomic, deposits of this type have been found at Wingellina, near the border of South Australia and Western Australia, at the Ora Banda district north-west of Kalgoorlie and at Marlborough in Queensland.

*Phosphate.* Accelerated search for phosphate rock commencing in late 1964 resulted in the discovery of major deposits in north-west Queensland and in the Northern Territory with reserves exceeding 2,600 million tons. It is unlikely that these will be developed in the immediate future.

*Tin.* The main deposits of tin now being exploited are in the Herberton field inland from Cairns, Queensland; north-west and north-east Tasmania; in the Pilbara region and in the south-west of Western Australia; and at Gibsonvale, Ardlathan and in the New England area, in New South Wales. As the result of exploration and expansion of known deposits in recent years, Australia is now a net exporter of this metal.

*Tungsten.* The main deposits of tungsten ores are in north-eastern Tasmania (wolfram) and on King Island (scheelite). Australia's own requirements are small, and production is principally for export. Australian production of tungsten concentrates could be doubled by the mid-1970's when the planned increases in production at King Island take effect.

*Uranium.* Export from Nabarlek (Northern Territory) and Mary Kathleen (Queensland) of 3,340 short tons of uranium oxide has been arranged for delivery between 1975 and 1985, and 1,000 short tons from Nabarlek from 1976-1983. During 1972, four large deposits of uranium ore have been discovered in the East Alligator River area of the Northern Territory. Preliminary estimates suggest that two of the deposits could each contain more than the total of previously known uranium reserves in Australia. Further work is being carried out at Nabarlek, Koongarra (Jim Jim), Ranger 1 and

Jabiluka; preliminary estimates suggest that at least 115,000 short tons of uranium oxide will be proven in these deposits. Export contracts for uranium oxide from Ranger 1 are for 1,300 short tons from 1977-1982, and 2,000 short tons from 1977-1986. Discovery of a large deposit at Yeelirrie near Wiluna, Western Australia was announced in 1971; reserves are estimated at the equivalent of 50,000 short tons of uranium oxide. Other important areas of exploration are Mount Painter and Lake Frome in South Australia, South Alligator River in the Northern Territory and the Westmoreland and Mount Isa areas of Queensland.

### Administration

All mineral rights in Australia are vested in the Crown except on land which was granted before the Crown began to reserve mineral rights. In practice these private mineral rights are important only in the New South Wales coalfields. In the States, rights are held by the State Governments and in the Territories of the Commonwealth these rights are vested in the Commonwealth Government. The Commonwealth Government is able also to influence over-all development and production activity in the mineral industry by virtue of its statutory powers with respect to international trade, customs and excise, taxation, and loan raisings. Certain specially formed bodies such as the Joint Coal Board and the Australian Atomic Energy Commission have been given administrative responsibility in defined areas.

#### Control of mining

Each State or Territory in the Commonwealth has its own mining Acts or Ordinances and regulations governing the prospecting for and working of mineral deposits. Before the commencement of the Acts mentioned in the next paragraph these Acts, etc., were similar in principle, but different in detail. They all made provision for miner's rights to prospect and for small mining leases for mineral production. The principles embodied in these Acts, etc., were established many years ago when mining operations were generally small scale and labour-intensive. Although amendments had been enacted to modernise the legislation, it was generally inadequate for the large scale capital-intensive operations often involved with modern mineral development. For this reason a large enterprise may take the course of acquiring mining titles by negotiation with the appropriate Minister for Mines and having the agreed terms and conditions embodied in an Act of the State Parliament. This method of acquisition has been used in several cases where the leasing company undertook an obligation (such as the erection of a large treatment works) in return for leases over large areas for a long period, and has become more common in recent years (e.g. iron ore in Western Australia, coal and bauxite in Queensland, bauxite in the Northern Territory).

Two States have passed and brought into operation new mining acts, i.e. *The Queensland Mining Act of 1968 to 1971* which commenced on 1 January 1972 and *The South Australian Mining Act, 1971* which commenced on 3 July 1972. These Acts are simpler and more suited to modern conditions than the mining acts which they replaced. Western Australia and New South Wales introduced Bills for new mining acts into their respective Parliaments in 1972 but these bills had not been passed at the end of 1972.

1971	1,148	1,231	3,926	130	7,820	62	101	14,418
1972	1,620	329	3,471	145	4,254	64	119	10,002

(a) Excludes areas held under special arrangements; see following text.

(b) At 30 June.

(c) Excludes lands held under miners' rights and dredging claims.

#### Control of exploration

This section refers in general to the exploration for all types of mineral deposits in Australia. Additional information relating to the search for petroleum is set out in the following section.

As a result of the introduction of large-scale modern prospecting methods (particularly air-borne prospecting), the small prospecting areas referred to in the previous section were found to be unsuitable in some instances, and steps have been taken in the States and Territories to ensure the availability of large areas for prospecting by interested persons. Large areas may be made available by provision within the Mining Acts or Ordinances for the issue of authorities to prospect over an area defined by a written agreement which also sets out provisions as to the amount of money to be spent, methods of prospecting, tenure of the agreement, etc.

The tenure of such areas is limited, usually to one or two years only, and, if renewed for a further period, is only over an area selected from the larger area as a result of work done during the life of the initial agreement. It does not give the holder any rights over, or authorities to prospect on, land already held under a mining title within the agreed area. Unless specifically stated in an agreement, the discovery of minerals, whether inside or outside an area covered by an authority to prospect, gives the discoverer no legal rights except the right to apply for a mining lease over the area in which the discovery was made. Suitable prospects are converted to mining tenements by making application for lease under the appropriate mining Act.

### Control of petroleum exploration

*On-shore.* In Australia all petroleum is the property of the Crown. Consequently, full control of petroleum mining rights is vested in the Government or Administration of each State or Territory. Any company, organisation or individual proposing to undertake petroleum exploration or development must first satisfy the Government concerned that the necessary financial and technological resources are available to carry out the operation.

There are three main types of petroleum titles:

- (a) the permit, covering initial geological, geophysical and exploration drilling;
- (b) the licence (in Victoria only), which covers detailed surveys and drilling; and
- (c) the lease, which covers development operations and production.

Further details of the petroleum legislation are given in Year Book No. 55, pages 996-7. The States of Western Australia and South Australia recently issued some revisions to their on-shore legislation, for details of which direct reference should be made to the State concerned.

*Off-shore.* The *Petroleum (Submerged Lands) Act 1967-1968* is the instrument whereby the control and safeguarding of the exploration and exploitation of petroleum resources on the territorial sea-bed and on the continental shelf are assured. Complementary legislation has been passed by each State Government and by the Federal Government.

The legislation provides for a two-stage system of titles: the exploration permit, which covers all forms of exploration including drilling, and the production licence, which covers development and exploration. Royalty is generally shared between State and Federal Governments on a 60 : 40 basis; however, overriding royalty is payable to the State under certain conditions. Mineral royalty receipts of governments under these Acts are included in the table on page 919. For full details of the off-shore legislation, see Year Book No. 55, pages 997-8.

The table following shows details of areas occupied under both on-shore and off-shore petroleum exploration and development titles at 31 December 1970, 1971 and 1972.

AREAS OCCUPIED UNDER PETROLEUM EXPLORATION AND DEVELOPMENT  
TITLES: STATES AND NORTHERN TERRITORY, 31 DECEMBER 1970 TO 1972

Year	N.S.W.	Vic.	Qld	S.A.(a)	W.A.	Tas.	N.T.(a)	Total
ON-SHORE AREAS (square miles)								
1970	87,886	25,308	506,118	233,526	n.a.(b)	639	61,769	n.a.
1971	75,732	18,491	397,484	219,966	n.a.(b)	230	57,734	n.a.
1972	33,486	19,862	337,074	218,992	n.a.(b)	..	57,734	n.a.
OFF-SHORE AREAS (5 minute blocks) (c)								
1970	643	1,189	2,918	3,425	8,808	2,314	3,626	22,923
1971	782	1,178	2,918	3,089	8,727	1,703	3,534	21,931
1972	503	1,178	2,918	3,089	10,171	1,498	3,535	22,892

(a) At 30 June. (b) Available only in terms of 5 minute blocks of which there were 5,517 at 31 December 1970, 6,510 at 31 December 1971 and 8,036 at 31 December 1972. (c) Area bounded by 5 minutes of latitude and 5 minutes of longitude; figures include partial blocks.

### Mineral royalties

The collection by governments of royalties for the production of minerals within their area of authority is an internationally accepted practice. In Australia the responsibility for mineral royalties is largely a State concern, and all States currently collect some form of mineral royalty payments. In the past most States have relied on an established system of standard rates which were uniform for all producers of any particular mineral in the State concerned. These charges were either a fixed monetary amount per ton (e.g. 5c per ton on gypsum mined in New South Wales) or an *ad valorem* royalty (e.g. 1.5 per cent of gross value of gold produced in New South Wales).

In recent years there has been an important basic change in the system of establishing royalty commitments, and it is now quite common for State Governments to negotiate special royalty rates with companies which are seeking mineral leases for large scale developments. These royalty rates may vary, depending on whether production is for export or for domestic processing. The rates for a particular mineral may also vary between producers. Important examples of this type of royalty agreement are the iron ore development agreements in Western Australia and coal development agreements in Queensland. Mineral royalties received by Governments in recent years are shown in the table below.

MINERAL ROYALTY RECEIPTS: GOVERNMENTS, 1967-68 TO 1971-72  
(\$'000)

	1967-68	1968-69	1969-70	1970-71	1971-72
New South Wales(a)	11,685	9,795	13,558	17,819	10,237
Victoria(b)	663	(c)687	(c)2,736	(c)12,239	(c)16,875
Queensland(a)	1,844	1,688	3,039	5,483	3,805
South Australia	1,037	1,254	1,557	1,798	1,821
Western Australia	6,238	11,001	15,700	22,347	25,247
Tasmania(d)	87	(e)251	(e)424	(e)410	(e)489
Northern Territory	291	283	449	431	634
Commonwealth	9	(c)11	(c)492	(c)5,024	(c)7,567
Total	21,853	24,971	37,953	65,552	66,676

(a) Includes royalty on sand and gravel from Crown lands. (b) Includes royalty on brown coal paid by State Electricity Commission. (c) From 1968-69 includes royalties received under the *Petroleum (Submerged Lands) Act*, 1967-68. (d) Includes rent and fees from mineral lands. (e) From 1968-69 includes royalties on iron ore.

### Control of exports

The Commonwealth Government maintains export controls over certain metals, petroleum and petroleum products and all raw and semi-processed minerals. These controls are administered under the authority of the Customs (Prohibited Exports) Regulations as amended from time to time by Statutory Rules. The Commonwealth authorities having jurisdiction over such exports are set out below together with listings of the goods subject to control. A clearance to export is needed in each case.

*Department of Minerals and Energy*—An amendment to the Customs (Prohibited Exports) Regulations on 22 February 1973 (Statutory Rule No. 39 of 1973) provided that the exportation from Australia of the following goods is prohibited unless approval in writing is issued by the Minister for Minerals and Energy or by an authorised person.

- (a) ores containing copper or tin, whether or not they have been subjected to processing or treatment; mineral or metallic substances produced in the course of processing or treatment of those ores; copper anodes, copper cathodes, copper ingots, copper rods, copper scrap and copper refinery shapes in the form of ingots, wire bars, billets, cakes, rolling blocks or ingot bars; copper alloys in the form of ingots, billets, cakes, rolling blocks or ingot bars and copper alloy scrap; refined tin in the form of ingots or in any other refinery form;
- (b) alumina;
- (c) natural gas, whether liquefied or not, liquefied petroleum gas, and condensate;
- (d) all other minerals including those other minerals that have been subjected to processing or treatment; substances produced in the course of processing or treatment of those other minerals but not including refined products obtained by or from processing or treatment of those other minerals and goods into which products, whether refined or not, obtained by or from processing or treatment of those other minerals have been converted.

The amendment of 22 February 1973 to the regulations extends the export controls which have functioned for some time over a limited number of metals and minerals, including copper and tin

metals and various specified materials containing those metals, iron ore, manganese ore, mineral sands and natural gas, by bringing within the scope of the export controls all minerals either in raw or semi-processed form.

In addition, previously existing regulations controlling the export of metals and minerals of atomic energy significance continue, viz. minerals containing uranium and thorium, uranium, thorium, beryllium and lithium metals, compounds and alloys; hafnium-free zirconium metal, alloys and compounds, nickel metal in certain forms.

*Department of Primary Industry*—phosphate rock, phosphate and superphosphate, and fertilisers containing phosphate or superphosphate.

### Joint Coal Board

The Joint Coal Board was established in 1946 under joint legislation of the Commonwealth and of the State of New South Wales to carry out special administrative functions in regard to the New South Wales black coal mining industry. A summary of these functions is given below.

- (i) To ensure that coal is produced in the State of New South Wales in such quantities and with such regularity as will meet requirements throughout Australia and in trade with other countries;
- (ii) to ensure that the coal resources of the State are conserved, developed, worked and used to the best advantage in the public interest;
- (iii) to ensure that coal produced in the State is distributed and used in such manner, quantities, classes and grades, and at such prices as are calculated best to serve the public interest and secure the economical use of coal and the maintenance of essential services and industrial activities; and
- (iv) to promote the welfare of workers engaged in the coal industry in the State.

### Australian Atomic Energy Commission

During 1953, Commonwealth legislation was enacted to set up an Atomic Energy Commission which is responsible, in an overall sense, for the production and utilisation of uranium in Australia. This Act, the *Atomic Energy Act 1953*, superseded the *Atomic Energy (Control of Materials) Act 1946*, but retains a provision of that Act which provides for the control of substances which could be used for production or use of atomic energy.

The functions of the Commission fall under two main headings. Firstly, it is responsible for undertaking and encouraging the search for and mining of uranium and is empowered to co-operate with the appropriate authorities of the States in connection with these and related matters. Secondly it is authorised to develop the practical uses of atomic energy by constructing and operating plant for this purpose, carrying out research and generally fostering the advancement of atomic energy technology. The Commission operates under the direction of the Minister for Minerals and Energy.

## Government assistance

The Commonwealth Government and the various State Governments provide assistance to the mineral industry in a variety of ways. The main forms of assistance are discussed below.

### Commonwealth Government Assistance

Assistance provided by the Commonwealth Government takes the form of income taxation concessions, subsidies, bounties, and technical assistance mainly through the work of the Bureau of Mineral Resources and the Commonwealth Scientific and Industrial Research Organization. A table showing direct Commonwealth Government payments to sectors of the mineral industry is included on page 923.

*Income taxation concessions.* One-fifth of the net income derived from mining for prescribed minerals in Australia or Papua New Guinea is exempt from tax. Principal minerals to which this concession applies are as follows: asbestos, bauxite, radio-active ores, rutile and zircon; and ores of copper, nickel and tin.

Income derived from mining principally for gold in Australia or Papua New Guinea is exempt from tax. The exemption is also available in respect of income derived from mining principally for gold and copper if the value of the gold obtained is not less than 40 per cent of the value of the total output.

Dividends paid wholly and exclusively out of exempt mining income are also exempt from tax.

One third of call moneys paid by resident and non-resident investors on non-redeemable shares in a company, whose principal business is mining or prospecting for minerals in Australia or Papua New Guinea, is allowable as a deduction from the investors' assessable income. Where the shares in such a company are issued after 9 May 1968, the deduction is dependent upon the company lodging a declaration that the call moneys have been, or will be, expended exclusively on the search for minerals (including petroleum) obtainable by mining.

Other valuable assistance has been given in the form of certain taxation concessions to encourage the search for petroleum and other minerals. Resident investors are permitted, for tax purposes, to deduct from their assessable income all application, allotment and call moneys paid for shares issued by petroleum exploration companies or companies engaged in prospecting or mining for other minerals obtainable by mining. These deductions are allowable only if the company elects to forgo an equivalent amount of the special deductions for capital expenditure to which it would otherwise be entitled. Many companies engaged in exploring for petroleum and other minerals have elected to pass on this benefit to their shareholders.

Special deductions for capital expenditure incurred in the discovery and mining of petroleum are allowable to a company deriving income from the sale of petroleum, and products of that petroleum, mined by the company in Australia or Papua New Guinea. A company is entitled to these deductions only when it produces Australian petroleum in commercial quantities. The general effect of the deductions is to free the proceeds from the sale of Australian or Papua New Guinean petroleum and its products from tax until all allowable capital expenditure has been fully recouped. Dividends paid wholly and exclusively out of profits so freed from tax are exempt.

Capital expenditure allowable to petroleum exploration companies includes, broadly, the cost of exploratory surveys, drilling and well-head plant, access roads and expenditure on housing and welfare.

A company mining or prospecting for minerals other than petroleum and gold may also be allowed special deductions for capital expenditure. Broadly, allowable capital expenditure includes expenditure on exploration and prospecting, preparation of a site for extractive mining operations, buildings, other improvements and plant necessary for those operations, access roads, certain treatment plant and housing and welfare.

The allowable capital expenditure of a general mining company may be deducted over the life of the mine, or twenty-five years, whichever is the lesser. Alternatively, the mine owner may elect to have the allowable capital expenditure deducted in the year it is incurred or, where appropriations have been made for such expenditure to be incurred in the following year, the deduction may be allowed in the year of the appropriation. Annual deductions for depreciation on mining plant may be allowed in lieu of spreading the cost over the life of the mine. Expenditure on housing and welfare may, at the option of the mine owner, be allowed over the life of the mine, or five years.

Special deductions are allowable for capital expenditure incurred on certain transport facilities used primarily and principally in relation to minerals mined in Australia, for the transport of raw minerals and certain specified products obtained from the processing of such minerals, or for transporting petroleum between the oil or gas field and a refinery or other terminal. The special deduction applies to expenditure incurred on a railway, road, pipe-line or similar transport facility. Allowable expenditure on transport facilities is deductible in equal annual instalments over a period of ten years.

*Petroleum search subsidy.* In 1957 the Commonwealth Government introduced the *Petroleum Search Subsidy Act* 1957 whereby stratigraphic drilling operations were subsidised to the extent of 50 per cent of cost. An amendment in 1959 widened the scope of operations for which subsidy was offered to include all types of geophysical surveys and off-structure drilling.

Subsidy payments under the Act for the years 1968 to 1972 are shown in the table on page 923. Various amendments to the Act and Regulations altered the rate of subsidy and the type of operations to which a subsidy is applicable. On-shore exploration drilling is subsidised at the rate of 30 per cent of approved costs and on-shore geophysical operations at a rate of 50 per cent. All similar off-shore operations are subsidised at a rate dependent upon the Australian financial contribution to the operation, the maximum rate being 30 per cent for operations wholly financed by Australian companies. Details of amendments are given on page 1001 of Year Book No. 55. The 1969 amendment provided for the payment of subsidy for approved operations completed before 30 June 1974. In May 1973 the Minister for Minerals and Energy announced the termination of the subsidy scheme and that operations extending beyond or commencing after 30 June 1974 would not be eligible for subsidy.

*Pricing of Australian crude oil.* Early in 1965 the Tariff Board conducted a public inquiry to determine an appropriate price for Australian crude oil, having regard to the Commonwealth Government's desire to encourage the search for oil and the consequent need to offer sufficient incentive to exploration companies. At the same time the Government indicated that it was anxious to prevent or minimise increased costs of petroleum products to consumers and to ensure that refineries using Australian crude oil were not detrimentally affected in relation to other refineries.

Evidence was heard from oil exploration, marketing and refining interests, government officials, coal and power interests, and major users of refined petroleum products. The Tariff Board recommended at that time that Moonie crude oil should be valued at \$2.69 a barrel at the nearest refinery centre, which included a variable differential related to the quality of the oil and an incentive of 22.4 cents per barrel. The Government adopted the Tariff Board's recommendations, and raised the incentive margin to 67 Australian cents a barrel; this margin to apply to all Australian crude oil producers.

To ensure that indigenous crude oil is used to the maximum extent in Australian refineries, the Government also adopted the Tariff Board's recommendation to impose penal import duties of 0.8 cents a gallon on crude oil and 2.4 cents a gallon on motor spirit to be paid by the companies which do not take their share of local crude oil. The share of local crude to be taken will be based on the importer's share of total imports of refinery feedstock or refined products or both.

Under these arrangements the price of Moonie crude is \$3.14 a barrel delivered Brisbane; and Barrow Island field when it commenced production in April 1967 was \$3.24 a barrel delivered Kwinana. This pricing structure was to remain operative until 17 September 1970.

However, the discovery of very large crude oil reserves in the Gippsland Shelf fields revealed that this pricing structure could result in the Australian consumer paying more for indigenous petroleum products than for similar products refined from imported crude oils. Following negotiations with the Commonwealth Government the Gippsland Shelf operators agreed to forgo the \$0.67 a barrel incentive, plus a further \$0.05 per barrel. This applied from commencement of production in October 1969 to 17 September 1970. As from 18 September 1970, the price of all Australian crude oils has been based on 'import parity' as at 10 October 1968, the date on which the new arrangements were announced by the Prime Minister in Parliament. This new pricing structure is also for a 5 year period.

Under this agreement the Gippsland crude oil is priced in the following manner:

	<i>per barrel</i> \$
Weighted average posted price as at 10 October 1968 of principal crudes imported into Australia . . . . .	1.62
less weighted average discounts as at 10 October 1968 . . . . .	0.26
	<hr/> 1.36
plus weighted average overseas freights as at 10 October 1968 . . . . .	0.46
Wharfage and other charges as at 10 October 1968 . . . . .	0.07
	<hr/> 1.89
less a deduction for coastal freight . . . . .	0.09
	<hr/> 1.80

To this the quality differential of approximately \$0.26 per barrel is added. The quality differential varies according to changes which occur in the quality of the oil produced.

Moonie crude oil on the same basis, for the five-year period will be \$2.15 per barrel f.o.b. Brisbane, since the coastal freight deduction of 9 cents per barrel does not apply.

Barrow Island crude will be the basic \$1.89 per barrel plus a quality differential of 34 cents, giving the total of \$2.23 per barrel f.o.b. Kwinana.

The Government has announced that the absorption of Australian crude oil by Australian refineries will be Government policy until September 1980. The allocations to refining and marketing companies are now based on the sales volume of certain products, and the associated penal duties on imports made by companies not taking up their allocations have been increased to 7.5 cents per gallon on motor spirit, 5 cents per gallon on other refined products and 2 cents per gallon on crude oil.

The Government has also announced that, should the production of Australian crude oil exceed the capacity of the refiners to absorb indigenous crude, the available market will be shared between all producing companies on a formula based on the reserves of each company. Export of the excess crude oil will be permitted.

*Assistance to the gold-mining industry.* Assistance to the gold-mining industry by subsidy was introduced at a time of rising costs in the industry and fixed official world price for gold. Because many producers were faced with the likelihood of closing down, the Government decided to subsidise marginal producers in Australia and Papua New Guinea. Under the *Gold-Mining Industry Assistance Act* 1954 a producer, the value of whose gold output exceeded 50 per cent of the total value of his mine output, was eligible for assistance, subject to certain conditions, on the production of gold

from 1 July 1954. The assistance scheme has been reviewed on a number of occasions since the Act was originally passed, and some liberalisations have been approved, including increases in the rates of subsidy payable authorised in amendments passed in 1957, 1959, 1965 and 1972.

Under the Act as it now stands the subsidy payable to small producers whose annual deliveries do not exceed 500 fine oz is \$6 per fine oz, irrespective of cost of production. For large producers, subject to certain provisions, the rate of subsidy payable is an amount equal to three-quarters of the excess of the average cost of production over \$27 per fine oz, with a maximum amount of subsidy of \$12 per fine oz. A producer whose deliveries during the year exceed 500 fine oz may elect to be treated as a small producer. In this case the subsidy rate payable per fine oz on total deliveries is \$6 reduced by 1c for each fine oz by which deliveries exceed 500 fine oz. The benefit under this provision terminates when deliveries in a year reach 1,100 fine oz. Where a producer receives an amount in excess of \$31.25 per fine oz as a result of sales on overseas premium markets or otherwise, the subsidy payable is, with effect from 1 January 1972, reduced by fifty per cent of the amount of the excess. Prior to 1 January 1972 subsidy was reduced by seventy-five per cent of the excess.

Payments under the Act will apply to production until 30 June 1975. The amounts paid to gold producers in the various States and Territories of Australia in each of the years 1968 to 1972 are shown in the table below.

*Assistance to the producers of sulphuric acid and iron pyrites.* The *Sulphuric Acid Bounty Act* 1954–1971 and the *Pyrites Bounty Act* 1960–1971 expired on 31 May 1972. The Acts provided for payment of bounty on sulphuric acid produced from prescribed Australian materials, and to producers of iron pyrites. Payments under these Acts for the years 1968 to 1972 are shown in the table below.

*Payments to producers of phosphate fertilisers.* The *Phosphate Fertilisers Bounty Act* 1963–1971 provides for a bounty to be paid on superphosphate and ammonium phosphate manufactured and used in Australia as a fertiliser. (This includes approved trace elements, compounds or substances when added to superphosphate). Bounty is payable on the soluble content of phosphorus pentoxide. A standard grade of superphosphate containing between 19.5 and 20.5 per cent soluble content of phosphorus pentoxide qualifies for full bounty of \$12 per ton. Outside this range, bounty is payable at \$60 per ton of contained phosphorus pentoxide. The intention of this Act is to assist consumers of phosphate fertilisers (primary producers). The Act is due to expire on 31 December 1974. Payments under the Act, for the years 1968 to 1972, are set out in the following table.

**COMMONWEALTH GOVERNMENT PAYMENTS TO THE MINERAL INDUSTRY  
AND TO THE MANUFACTURING INDUSTRY FOR PRODUCTS OF MINERAL  
ORIGIN; AUSTRALIA, 1968 TO 1972**  
(\$'000)

Year	Petroleum exploration (a)	Gold mining(b)	Pyrites mining(c)	Sulphuric acid production (d)	Phosphate fertiliser production (e)
1968 . . .	13,805	2,817	..	1,279	24,907
1969 . . .	14,911	1,077	..	988	31,665
1970 . . .	11,237	3,278	90	740	45,820
1971 . . .	8,468	2,162	568	489	40,815
1972 . . .	8,422	1,185	962	527	49,137

(a) *Petroleum Search Subsidy Act* 1959–69. Includes payments in Papua New Guinea; see also the table on page 946. (b) *Gold-Mining Industry Assistance Act* 1954–72. Includes payments in Papua New Guinea. (c) *Pyrites Bounty Act* 1960–1971. This Act expired on 31 May 1972. (d) *Sulphuric Acid Bounty Act* 1954–1971. This Act expired on 31 May 1972. (e) *Phosphate Fertilisers Bounty Act* 1963–1971.

*Bureau of Mineral Resources, Geology and Geophysics.* The functions of the Bureau are as follows:

- (i) as a primary function, to obtain, study, publish and provide basic geological and geophysical information necessary for the exploration and development of the nation's mineral resources; this to be done where appropriate in co-operation with State and Territorial authorities;
- (ii) to undertake experimental studies and research into geology and geophysics in order to support the function of obtaining basic information;
- (iii) to make basic investigations of the earth's magnetic and gravitational fields and in seismology and vulcanology;

- (iv) to complement the work of the State and Territorial authorities by undertaking geological and geophysical investigations into the occurrence and distribution of underground water;
- (v) to undertake geological and geophysical investigations on behalf of other Commonwealth Departments and authorities including the provision of resident staff by arrangement with the Territories;
- (vi) to obtain basic information on, and review the mineral resources of the Commonwealth and its Territories; to study the various sectors of the mineral industry both in the national and international spheres; to publish and provide information about the mineral industry;
- (vii) to undertake such investigations in mining engineering and petroleum technology as are relevant to (i) and (vi) above;
- (viii) to prepare advice for Government on the mineral industry, including the exploration and development of mineral resources in the national interest;
- (ix) when directed by Government, to administer schemes for the assistance of sectors of the mineral industry and to undertake special mineral projects.

The Bureau comprises five branches under the Director: Operations, Mineral Resources, Geological, Geophysical, and Petroleum Exploration. The Operations Branch consists of three sections, Planning and Co-ordination, Publications and Information, and Administrative. It carries out central office functions, including planning and control of program, assessment of results, co-ordination of activities, liaison, and distribution of information. The Mineral Resources Branch comprises the sections Mineral Economics, Mining Engineering, and Petroleum Technology, and is concerned largely with those aspects of the Bureau's work which involve studies of the mineral industry as a whole, and the preparation of advice and reviews for the Government, industry and the public. The Geological and Geophysical Branches are responsible for the principal field activities of the Bureau, and the operation of observatories, while the Petroleum Exploration Branch is concerned with the administration of the *Petroleum Search Subsidy Act* 1959–1969 and the assessment of sedimentary basins in Australia and its Territories. The establishment of the Bureau is 637 officers (at 30 June 1972), of whom 285 were professional. The budget for the financial year 1972–73 was \$17.75 million, of which \$8.6 million was provided for payment under the *Petroleum Search Subsidy Act* 1959–1969.

The Bureau maintains laboratories in Canberra and Darwin which are engaged on geochemical, geochronological and petroleum technological studies and basic research into the design and testing of geophysical equipment. The Bureau also maintains geophysical observatories at Toolangi, Mundaring, Port Moresby, Mawson (Antarctica), and Macquarie Island. The geophysical observatories are engaged in magnetic, ionospheric, and seismic investigations and are base stations for field operations.

#### State Government assistance

In addition to free assays and determinations of rocks and minerals carried out for prospectors by the Mines Departments of the States and Territories, technical officers of these departments provide advice to the mining and allied industries where required, carry out field examinations of mining prospects, advise on exploration and development, select sites for water supply, and in general give a free technical service to the mining industry.

*New South Wales.* The State Mines Department renders scientific, technical and financial assistance to the mining industry. Grants are made to cover up to half the cost of prospecting and drilling operations. These grants are repayable if sufficient pay minerals are discovered or if certain other conditions are met. Loans at low interest rates may be made to prospectors and miners for the purchase of plant and machinery. A quantity of equipment is also available for hire in several localities. The Department has itself undertaken a program of contract drilling to investigate the existence of mineral deposits in the State (including the testing and proving of coal resources). Expenditure on financial assistance in 1971–72 amounted to \$634,236 including \$214,923 on the Department's own drilling program.

*Victoria.* The Mines Department conducts geological and mineral surveys and produces geological maps and issues scientific and technical reports thereon. Extensive rotary, percussion and auger drilling operations are carried out and in conjunction with these, sedimentary basin studies are made to evaluate petroleum, mineral and groundwater potential. A comprehensive library and a geological museum are maintained and a core library retains cores and cuttings from drilling operations. The administration of petroleum and pipeline legislation ensures the conduct of all petroleum exploration and production operations by private operators, onshore and offshore, in a safe and effective manner. Technical and drilling assistance and loans or grants are available for mineral exploration and prospecting and for approved development operations. Six stamp batteries provide an ore crushing service to enable test crushings to be made at nominal cost. Information is available on mining law

and mineral statistics. Assays of ores, analytical services, advice on metallurgical treatments, industrial pollution and chemical problems are available together with information on the manufacture, handling and use of explosives. Financial assistance is available to municipalities to reclaim mine-damaged land, in areas where a Reclamation Committee recommends such action.

*Queensland.* The Department of Mines provides assistance to mining by way of geological services, grants for construction and maintenance of roads in mining areas, repayable advances or subsidies for mine development, hiring of equipment, and assistance to prospectors. The Department maintains a concentration plant for tin ores at Irvinebank, an assay office at Cloncurry, a battery for treatment of gold-bearing ores at Charters Towers, and diamond drilling plants in various parts of the State.

*South Australia.* The Department of Mines provides the following services and facilities to the mineral industry: (i) drilling and testing of mineral deposits, geophysical investigations, well logging, development of sub-surface water supplies for farming, pastoral, irrigation, and mining purposes; (ii) geological examination of mineral deposits, ground water supplies, dam foundation and drainage problems, and publication and issue of geological bulletins and maps. It also provides, through the Australian Mineral Development Laboratories, facilities for chemical, metallurgical, analytical and assay investigations, testing and treatment of ores and minerals, and petrographic, mineragraphic and radiometric determinations. Pilot scale metallurgical and chemical treatment plants are maintained and operated for the development of mineral extraction processes.

*Western Australia.* Prospectors receive assistance of either \$15 or \$17.50 a week according to the prospecting locality. North of the 26th parallel and within a defined area south of this, lying largely outside the agricultural areas, assistance is given to the extent of \$17.50 a week. In the remainder of the State prospectors receive \$15 a week. Provision is also made for the supply of some tools required for prospecting. There are seventeen State batteries operating intermittently throughout the goldfields for the treatment of ore from prospectors and small mine-owners at a nominal charge. A cartage subsidy is also granted to such operators sending gold and lead ores to State batteries for treatment. Provision is made for loans to mine-owners who require assistance to develop mines. The Government also has a drilling scheme, financing mine-owners on a \$1 for \$1 basis.

*Tasmania.* The Department of Mines provides financial assistance to mining lessees for the purchase of plant and machinery, for sinking, repairing or de-watering of shafts, for construction of dams and water races, for testing and proving a deposit of any mining product, for developmental work, and for diamond and other types of drilling. The Department has available for hire, percussion and diamond drills for exploration, as well as a complete plant for small shaft sinking and tunnelling. Other assistance is rendered to the industry in the form of geological and engineering advice, through ore-dressing research into metallurgical recoveries, and the selection and design of treatment plant.

*Northern Territory.* To encourage the development of the mining industry the Department of the Northern Territory operates two batteries for the treatment of ores for miners. The Tennant Creek battery will continue cyaniding the gold in accumulated tailings and is available for crushing. The Mount Wells battery is crushing mainly parcels of tin ores. Small quantities of ore containing gold, silver, lead, copper and wolfram are also crushed from time to time. The crushing charges are subsidised by the Government. In addition the Department of the Northern Territory provides cartage subsidies and financial advances to encourage miners to carry out mining operations. Assistance is also given to the mining industry by drilling encouraging prospects. Roads and water supply services are provided and maintained for mines under active development throughout the Northern Territory.

## Research

Research investigations into problems of mining, ore-search, ore-dressing and metallurgy are conducted by Government bodies, by universities, by private enterprise, and by combined efforts of these bodies. A summary of their functions follows.

### Australian Atomic Energy Commission

The Australian Atomic Energy Commission conducts research at its laboratories at Lucas Heights in Sydney on the development of nuclear power, including research on nuclear materials and on metals and ceramics used for nuclear power. Research conducted by the Commission is discussed in detail in Year Book No. 55, page 561.

### The Australian Mineral Development Laboratories

Contract research and technical consulting for the mineral and associated industries is undertaken by The Australian Mineral Development Laboratories (Amdel), at Adelaide. This organisation is controlled by a council comprising representatives of the mineral industry, the South Australian

Government and the Commonwealth Government. Extensive facilities are available in the fields of analytical chemistry, mineralogy and petrology, chemical metallurgy and mineral engineering, operations research/computer services and materials technology. Both long and short term applied research is carried out and all investigations are conducted on a strictly confidential basis. Services in the field of pollution and environmental control are also available through the recently formed Amdel group Amdel (Aspect).

### **The Baas Becking Geobiological Research Laboratory**

In 1965 the Baas Becking Geobiological Research Laboratory was established in the Bureau of Mineral Resources Building in Canberra, under the joint sponsorship of the Commonwealth Scientific and Industrial Research Organization, the Bureau of Mineral Resources, and the Australian Mineral Industries Research Association (*see* Research by private enterprise, page 927). The broad objective of the research work is to investigate the biological and chemical processes associated with the formation of mineral deposits of the stratiform type.

Emphasis is placed on investigations to establish the relationship of biological factors to the natural physico-chemical environment with particular reference to the possible role of these factors in the formation and transformation of sulphide minerals. Investigations have included the response of micro-organisms to heavy metals; biochemistry and physiology of oxidative and reductive sulphur transformations; role of organisms in the concentration of mineral elements; physico-chemistry of low-temperature mineral synthesis; and mobility of sulphides under the influence of temperature and pressure and the interaction of mineral types.

### **Bureau of Mineral Resources, Geology and Geophysics**

Mineral research by the Bureau of Mineral Resources is concerned with basic problems of mineral emplacement. Special studies are undertaken of: the sedimentary environment of potentially oil-bearing rocks; the genesis of continental and marine phosphate; the fundamental chemistry of metallic ore deposits; the structural, chemical, and stratigraphic contents of ore deposits; and geophysical interpretation by means of model testing.

For details of the functions of the Bureau of Mineral Resources, Geology and Geophysics, *see* page 923.

### **Commonwealth Scientific and Industrial Research Organization**

Mineral research by the Commonwealth Scientific and Industrial Research Organization is undertaken mainly in the Minerals Research Laboratories comprising the Divisions of Mineral Chemistry, Chemical Engineering, Mineralogy, and Mineral Physics. Major laboratories are located at Clayton (Vic.), Port Melbourne, Sydney and Perth. Current research program objectives and sub-program titles are:

- (a) *Exploration.* To improve and develop procedures for locating mineral deposits (surface geochemistry, rock geochemistry, structural analysis, geobiology, remote sensing, fuel deposits).
- (b) *Mineralisation.* To improve methods of recognizing and defining the nature and economic significance of specific types of mineralisation (nickel, chromium, acid igneous deposits, stratiform ores, ore-forming fluids, electromagnetic geophysics, field analysis, mineral structures).
- (c) *Mining and concentration.* To identify, and utilize in practice, those properties of minerals and rocks which will increase the overall efficiency of their mining, concentration and handling (mineral dressing, flotation chemistry, reactivity, non-metallics).
- (d) *Process Metallurgy.* To improve and develop methods for the economic processing of minerals and mineral products (slags, iron ores, nickel ores, ilmenite, metal refining, zinc, lead, structures and bonding, plasmas, carbon reductants, fluidisation).
- (e) *Environment.* To alleviate, or turn to economic advantage, aspects of mining minerals, processing, or minerals utilisation which may be detrimental to the environment (sulphide, electrolysis, combustion, gas cleaning, reactive carbon, sulphide roasting, nutrient cycling).
- (f) *Associated industries.* To apply the skills and expertise of the Mineral Research Laboratories to the improvement and development of industrial processes not necessarily connected with the minerals industry (polymers, pulp and paper, sugar, food).

The minerals industry provides strong support in the form of co-operative research planning, collaborative investigation of specific projects, and financial grants for appropriate developmental work.

### National Coal Research Advisory Committee

The functions of the National Coal Research Advisory Committee are to review coal research activity in Australia, to recommend priorities for further activities in this area, and to allocate special Commonwealth funds of \$260,000 per year provided for coal research projects as recommended by the committee. This amount is additional to that expended by C.S.I.R.O. and Commonwealth Departments on coal research. The major beneficiary under this scheme is the Australian Coal Industry Research Laboratories; other beneficiaries are university departments.

From 1965 to 1969 special coal research funds of \$520,000 annually were available to the committee, comprising the Commonwealth contribution of \$260,000 matching an equivalent total contribution from State Governments and coal producing and consuming industries. Beginning with the financial year 1968–69 the States and industry are independently sponsoring coal research and development according to their own individual requirements.

### University Research

The various universities in Australia carry out research into various aspects of the mineral industry such as geology, ore mineralogy and genesis, mining techniques, mineral processing, extractive metallurgy, and materials and metals technology.

### Research by private enterprise

Most large mining and smelting companies have laboratories dealing with their own individual problems. Private industry formed the Australian Mineral Industries Research Association in 1959 to provide industry with representation in the management of the Australian Mineral Development Laboratories. The Association now finances research work into geology, mining and mineral processing at Universities, C.S.I.R.O. and the Australian Mineral Development Laboratories. Membership of the Association at 30 June 1972 was: full members 57, associate members 20, registered divisions 13. Expenditure on research projects during the year 1971–72 was \$453,308.

## International relations

Because Australia is a large supplier of certain minerals to the rest of the world and because the welfare of the domestic industry depends to a large extent on the maintenance of a high level of exports, international relations are of considerable importance to the industry, and the Commonwealth Government takes an active role in international consultations and discussions relating to minerals. The most important international commitments are discussed below.

### International Tin Agreement

The First International Tin Agreement (of the post-war period) was in operation for five years from 1 July 1956 to 30 June 1961. This Agreement was subsequently replaced by the Second and Third International Tin Agreements, which came into force on 21 February 1962 and 21 March 1967, respectively. Details of these Agreements are given in Year Book No. 57, pages 911–12.

Australia has signed and ratified the Fourth International Tin Agreement which came into operation on 1 July 1971 for a period of 5 years. Australia joined the Fourth Agreement as a 'producing' (i.e. exporting) member, whereas in the past Agreements Australia's status had been that of a 'consuming' (i.e. importing) member. This stems from the fact that Australia's tin production has increased significantly over recent years making it a net exporter of tin.

The objectives of this Agreement are the same as for its predecessors. Producing countries are required to contribute to a buffer-stock-equivalent in cash or tin up to 20,000 tons of tin metal, which is used to buffer short-term fluctuations in the world market price. In the event of persistent market disequilibrium through causes beyond the ability of the buffer stock mechanism to control, the agreement also provides for the regulation of exports and stocks to stabilise the market. The main provisions of the Fourth Agreement are substantially the same as those of the Third. However, the Buffer Stock Manager, a paid Council employee charged with operating the buffer stock, has been given somewhat greater flexibility in reacting to market situations.

The International Tin Agreement is operated by the International Tin Council, which is made up of the following Governments: *Producers*—Australia, Bolivia, Indonesia, Malaysia, Nigeria (Federal Republic of), Thailand, Zaire (Republic of). *Consumers*—Austria, Belgium-Luxembourg, Bulgaria, Canada, Czechoslovakia, Denmark, France, Germany (Federal Republic of), Hungary, India, Italy, Japan, Korea (Republic of), Netherlands, Poland, Romania, Spain, Turkey, United Kingdom, Union of Soviet Socialist Republics and Yugoslavia. The producing countries hold a total of 1,000 votes, distributed so that each country receives five initial votes and an additional

number corresponding to its percentage as laid down by the Agreement. The consuming countries hold a total of 1,000 votes also distributed so that each country receives five initial votes and an additional number proportionate to tonnages consumed. The allocation of votes in each category is periodically reviewed.

The International Tin Agreement establishes floor and ceiling prices for tin and, by the medium of a buffer stock and remedial trading on the London Metal Exchange, aims at confining the price within these limits. Because of a world over-supply situation of tin, the Council imposed export controls on producer members in January 1973. For the second quarter of 1973 export by all producer countries except Australia was cut by 2.5 per cent of 1972 production and the Australian export was cut by 2.5 per cent of estimated 1972 exports.

#### **International Lead-Zinc Study Group**

With the cessation of stockpile buying of lead and zinc by the United States Government in 1958, world producers were faced with the prospect of a serious imbalance between world supply and demand for these metals. To meet this problem a series of meetings of interested governments was held, at which Australia was represented. These meetings culminated in the formation of the International Lead-Zinc Study Group which was established in January 1960. The Study Group comprises the following Governments: Algeria, Australia, Austria, Belgium, Bulgaria, Canada, Czechoslovakia, Denmark, Finland, France, the Federal Republic of Germany, Hungary, India, Italy, Japan, Mexico, Morocco, the Netherlands, Norway, Peru, Poland, the Republic of South Africa, Spain, Sweden, Tunisia, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, the United States of America, Yugoslavia and Zambia. The Group provides opportunities for inter-governmental consultations on international trade in lead and zinc and for studies of the world situation in lead and zinc having regard especially to the desirability of providing continuous accurate information regarding the supply and demand position and its probable development.

### **MINERAL INDUSTRY STATISTICS**

Statistics presented in this chapter refer mainly to the mining industry, mineral production, mineral exploration, and overseas participation in the Australian mining industry. In addition to the mining industry, data relating to mineral processing and treatment and overseas trade are included to give more information about the mining industry and other associated activities in the Australian economy.

#### **Mining industry statistics, 1968-69, 1969-70 and 1970-71**

This section contains statistics of the mining industry for all States and Territories and Australia obtained from Mining Censuses conducted in respect of the years ended June 1969, 1970 and 1971.

Prior to 1968-69 the Annual Mining and Quarrying Census related to years ended 31 December. However, commencing with 1968-69, the Mining Census was changed to a year ended 30 June to conform with the period covered by other economic censuses in Australia. There are several other differences between the censuses of 1968-69, 1969-70 and 1970-71 and those for earlier years (mainly in definition, scope and coverage) and as a result the statistics obtained for 1968-69 and later, are not strictly comparable with those for earlier years. Further information regarding these differences is given in Year Book No. 57, pages 912-914. Mining industry statistics for years prior to 1968-69 are also contained in Year Book No. 57 and earlier issues.

For the year ended June 1969, the Mining Census (including quarrying) was conducted for the first time on an integrated basis with Censuses of Manufacturing, Electricity and Gas, Retail Trade and Selected Services, and Wholesale Trade.

Briefly, the integration of these economic censuses was designed to increase substantially the usefulness and comparability of economic statistics collected and published by the Bureau, and to form a basis for the sample surveys which supply current economic statistics from quarter to quarter, particularly those which provide data for the quarterly national income and expenditure estimates. A detailed description of the integrated censuses is contained in Chapter 31, Year Book No. 56.

For 1969-70 and subsequent years the annual Mining Census has been conducted on the same basis as that for 1968-69.

The table below shows key items of data for Australia for 1970-71 and summary data for 1968-69 and 1969-70. Each following table shows statistics for a particular item for all States and Territories and Australia for 1970-71 and summary data for 1968-69 and 1969-70, and is preceded by an explanation of the item.

**MINING ESTABLISHMENTS: SUMMARY OF OPERATIONS, BY INDUSTRY SUB-DIVISION  
AUSTRALIA, 1968-69 TO 1970-71**

(a) Australian Standard Industrial Classification.

### Employment

The statistics of the number of persons employed shown in the following table relate to working proprietors at the end of June and employees on the payroll of the last pay period in June, including those working at separately located administrative offices and ancillary units in the State. Note that persons employed in each State (and their wages and salaries) relate to those employed at establishments, administrative offices or ancillary units located in the State, even though the administrative offices or ancillary units may have served establishments located in another State.

(c) Not

### Accidents in mining

Particulars of numbers of persons killed and injured in accidents in mines and associated treatment plants are recorded by State Mines Departments. Numbers injured are not reported on a uniform basis in all States, as varying criteria are used in determining what constitutes injury. In 1970-71 (calendar year 1970 for Queensland), 60 persons were recorded as killed and 1,158 as injured in mining (including quarrying) accidents. Recorded deaths and injuries in that year in the metallic minerals industry were 29 and 678, and in the coal mining industry 19 and 311.

### Wages and salaries

The following table shows the wages and salaries of all employees of the establishment, including those working at separately located administrative offices and ancillary units in the State. Drawings of working proprietors are not included.

**Turnover**

The following table shows turnover (sales of minerals and other goods whether produced by the establishment or not, plus transfers out of minerals and other goods to other establishments of the same enterprise, plus all other operating revenue from outside the enterprise, such as commission, repair and service revenue). This item excludes rents, leasing revenue, interest, royalties, and receipts from the sale of fixed tangible assets.

**MINING ESTABLISHMENTS: TURNOVER, BY INDUSTRY SUB-DIVISION  
STATES AND TERRITORIES, 1968-69 TO 1970-71**

**Mineral production**

This section contains details of the output (quantities and values) of minerals during the year ended June 1971 for all States and Territories and Australia, together with information for Australia for the four preceding years.

It should be noted that details for the years 1967 and 1968 relate to a year ended December. The change in 1969 to a June year was made to bring mineral production statistics and the annual mining census (which in previous years also related to a December year) to the same time basis as the other economic censuses conducted during that year.

Minerals are classified into five major groups, namely metallic minerals, coal, crude petroleum (including natural gas), construction materials and other non-metallic minerals. In the statistics published in this section the minerals are arranged in these five groups.

The statistics are derived from information supplied in returns to the various State Mines Departments and this Bureau, supplemented in some cases by information made available by the Department of Minerals and Energy and by data compiled by this Bureau from other sources.

**Scope of mineral statistics and relation to mining industry statistics**

The statistics of mineral production for the years ended June 1969, 1970 and 1971, apart from the change to a June year basis, are comparable with those for earlier years. Although the integration of the mining census for 1968-69 with other economic censuses conducted in that year (manufacturing, electricity and gas, retail trade, and wholesale trade) was accompanied by major changes in the scope of the mining census and thus in the scope of the mining industry statistics, these changes had little effect on the scope of the mineral production statistics now published. This is because mineral production data were collected, not only from establishments coming within the scope of the mining census as now defined, but also from those establishments classified as non-mining establishments which, as a subsidiary activity, carried out mining or quarrying activities (e.g. brick and cement manufacturing establishments extracting clays, limestone), and from itinerant and part-time miners.

However, as in past years, coverage is deficient in the case of some minerals, principally because of the difficulties in obtaining complete lists of producers and collecting satisfactory returns.

### Principles for measuring output of minerals

The quantities of individual minerals produced are recorded, in general, in the form in which the minerals are dispatched from the mine or from associated treatment works in the locality of the mine. Thus, for metallic minerals, the output is recorded as ore if no treatment is undertaken at or near the mine, and as concentrate if ore dressing operations are carried out in associated works in the locality of the mine. In addition to the basic quantity data, the content of metallic minerals (based on assay) are recorded. No allowance has been made for losses in smelting and refining and the quantities shown are therefore, in general, greater than the contents actually recoverable.

The output of individual minerals is valued at the mine or at associated treatment works in the locality of the mine. This valuation is derived, in general, by valuing the quantity produced during the year at the unit selling value (including any subsidy) less any transport costs from the mine or associated treatment works to the point of sale. For some metals, however, special values of output, based on actual or estimated realisations are supplied by certain large mineral producers.

It should be noted that, commencing with the year 1968-69, the output of metals by enterprises for their own consumption in Australia has been valued on a different basis to that used in previous years. The effect of these changes is that the overall value of coal produced in 1968-69 and later years is somewhat lower and the value of certain other minerals somewhat higher than if the earlier valuation methods had been retained.

### Quantity of minerals produced

The following tables show particulars of the quantities of minerals produced during 1970-71 and earlier years.

(a) Year ended 30 June. (b) Includes antimony ore. (c) Not available for publication. (d) Includes copper precipitate. (e) Includes cupreous ore for fertiliser. (f) Includes copper slag. (g) Includes iron concentrate. (h) For cement manufacture, coal washing, flux and gas purification. (i) Includes silver-lead ore, silver-lead slimes and lead slag. (j) Zinc ore for fertiliser. (k) Includes brown coal used for briquette production. (l) Source: Department of Minerals and Energy and State Mines Departments. (m) Sales—excludes condensate blended with other petroleum products. (n) Excludes refinery production. (o) Incomplete, owing to difficulties of coverage. (p) Included in silica. (q) Comprises peat for fertiliser and peat moss.

NOTE. Particulars of the production of uranium concentrate are not available for publication.

## Contents of metallic minerals produced

In the foregoing tables the section headed "Metallic Minerals" contains statistics of ores and concentrates produced. The following tables contain statistics of the metallic content of these ores and concentrates. The figures are the result of assays carried out on the ores and concentrates and may not represent the ultimate yield of metals produced after smelting and refining.

(a) Year ended 30 June. (b) Not available for publication. (c) Includes value of copper slag. (d) Includes alluvial gold. (e) Includes value of silver-lead ore, silver-lead slimes and lead slag. (f) Incomplete owing to difficulties of coverage in some States. (g) Mainly opals and sapphires. (h) Included in silica. (i) Comprises peat for fertiliser and peat moss.

## Overseas participation in Australian mining industry

For the latest information available concerning overseas ownership and control in Australian mining industry see Year Book No. 57, pages 932-5.

## Mineral exploration (other than for petroleum)

### Definition

Mineral exploration (other than for petroleum) consists of the search for, and/or appraisal of, new ore occurrences and known deposits of minerals (including extensions to deposits being worked) by geological, geophysical, geochemical, and other methods (including drilling). Exploration for water is excluded. The construction of shafts and adits is included if primarily for exploration purposes. Excluded are mine development activities (which include the construction of drives, shafts, winzes, etc.) in underground mines and the preparation of quarrying sites for open-cut extraction (including overburden removal) carried out primarily for the purpose of commencing or extending mining and quarrying operations. Mine development activities (including mines under development) are included in the scope of the annual mining census.

### Sources of statistics

The statistics of exploration for minerals *other than petroleum* are derived from the annual mineral exploration census (excluding petroleum exploration), which is carried out by this Bureau in association with State Mines Departments.

### Period covered

For 1968 and earlier years the annual mineral exploration census (excluding petroleum exploration) related to years ended 31 December. As from 1968-69, the reporting period for this census has related to years ended 30 June, to conform with a similar change in the annual mining census. It should be noted that data for the six months ended 31 December 1968 are included in both the 1968 and 1968-69 figures in these tables.

### Scope of mineral exploration census

The scope of the census comprises the following activities.

(a) *Private exploration on production leases*—relates to exploration carried out *on the production lease* by privately operated mines currently producing or under development for production of minerals other than petroleum. This also includes particulars of exploration within their production leases by business undertakings operated by State and local government authorities. Mines included in this section of the mineral exploration census are also included in the annual mining census with the exception of a limited number of itinerant prospectors and small mines for which information was not collected.

(b) *Private exploration on other licensed areas*—relates to exploration carried out by private enterprises and business undertakings operated by State and local government authorities on areas covered by exploration licences, authorities to enter, authorities to prospect, and similar licences and authorities issued by State Governments for exploration for minerals other than petroleum.

(c) *Other private exploration*—relates to exploration by private enterprises and business undertakings operated by State and local government authorities for minerals other than petroleum, which is not directly connected with areas under lease, licence, etc., including general surveys, aerial surveys, report writing, map preparation and other off-site activities not directly attributable to particular leases or licence areas.

(d) *Exploration by government*—relates to exploration for minerals other than petroleum carried out by—

- (i) Commonwealth Government (Bureau of Mineral Resources, Geology and Geophysics, and Joint Coal Board), and
- (ii) State Mines Departments.

**Employment in mineral exploration**

In censuses prior to 1970-71 employment data were classified to one of the two categories: 'professional persons', and 'non-professional persons'. Employment data for working proprietors and working partners were, however, included in either one or the other of these categories. From 1970-71 separate details of man-weeks worked by 'working proprietors and working partners' were collected and are shown separately in the table on page 945.

**Expenditure, employment, footage drilled, etc., States and Northern Territory**

The following table shows expenditure, employment and footage drilled, etc., on mineral exploration other than for petroleum in each State and the Northern Territory during the years 1968 to 1971-72.

(a) Expenditure whether charged as working expenses or capitalised. (b) Year ended 31 December. (c) Bureau of Mineral Resources and Joint Coal Board. (d) Included in expenditure shown above. Comprises amounts paid to drilling contractors, geological consultants, technical advisers, etc., for exploration services. (e) Operator and staff only (includes time spent on report writing and similar off-site activities associated with exploration); excludes contractors and their employees. (f) Not collected separately prior to 1970-71. Included in professional and non-professional employment, see text page 944. (g) Geologists, geophysicists, engineers, etc., engaged on exploration work. (h) Drill operators, field hands, etc. (i) 'Sunk or driven' relates to shafts, winzes, etc., sunk, and drives, adits, etc., driven.

## Petroleum exploration

### Source of statistics

These statistics were collected and compiled by the Bureau of Mineral Resources, Geology and Geophysics, Canberra. Statistical and other information relating to petroleum exploration is published by the Bureau of Mineral Resources in *The Petroleum Newsletter* (issued quarterly) and *The Australian Mineral Industry—Annual Review*.

### Scope

Petroleum exploration consists of the search for, and/or appraisal of, deposits of crude oil and/or natural gas and natural gas liquids by geological, geophysical, geochemical, and other exploration methods, including drilling. Included in the expenditure are the costs of drilling exploratory oil and/or gas wells and the testing of such wells. Also included are the cost of access roads, site construction, permits, licences and similar fees, relevant office buildings and furniture, transportation equipment, storage facilities, plant and equipment, and review work, where these are undertaken primarily for purposes of exploration for deposits of petroleum. Details of developmental oil and/or gas wells are excluded.

### Operations

The following tables show particulars of expenditure, and wells and footage drilled in petroleum exploration in recent years.

### Mineral processing and treatment

The extraction of minerals from ore deposits, as in mining and quarrying, is only part of the wider field of mineral technology. It is only in rare instances that minerals can be used directly in the form in which they are produced by mines, and, much more commonly, minerals must undergo considerable processing and treatment before their full utility and value can be realised. Examples of this processing and treatment are the smelting and refining of metals, the production of coke from coal, the refining of oil, and the treatment of non-metallic minerals as in the production of superphosphate and other chemicals and building materials like bricks and cement. The sectors of the economy which carry out this work are classified for statistical purposes to the manufacturing industry, and particulars relating to those activities which principally involve mineral processing and treatment—i.e. the treatment of non-metalliferous mine and quarry products, the manufacture of mineral oils and chemical fertilisers, the smelting, converting, refining and rolling of iron and steel, the extracting and refining of other metals, and the manufacture of alloys are given in Chapter 21, Manufacturing Industry.

#### Principal products

The following table shows particulars of the production of certain important manufactured products of mineral origin during the years 1966–67 to 1971–72.

Superphosphate(e) . . . . . '000 tons	4,430	3,935	3,879	3,522	3,066

(a) Excludes secondary metal with the exception of pig iron and steel ingots. (b) metallic content. (c) Year ended 31 May. (d) Newly-won gold of Australian origin. (e) Includes double and triple superphosphate and ammonium phosphate expressed in terms of single superphosphate i.e. 22% P<sub>2</sub>O<sub>5</sub> equivalent.

## Overseas trade

### Exports and imports

Data of imports and exports of minerals and mineral products have been extracted from the official trade statistics compiled in the Commonwealth Bureau of Census and Statistics. Particulars of the quantities and values (\$f.o.b. port of shipment) of the principal minerals and mineral products exported from and imported into Australia during the years 1969-70 to 1971-72 are shown in the following table

**EXPORTS AND IMPORTS OF PRINCIPAL MINERALS AND MINERAL PRODUCTS  
AUSTRALIA, 1969-70 TO 1971-72**

Commodity(a)	Quantity			Value (\$'000 f.o.b.)		
	1969-70	1970-71	1971-72	1969-70	1970-71	1971-72
<b>EXPORTS(b)</b>						
Non-ferrous—

(a) In addition to the commodities listed, significant quantities of bauxite and nickel ores and concentrates are exported but details are not available for publication. (b) Quantities shown for metallic minerals are gross quantities, not metallic contents. (c) Includes also partly refined oil, topped crudes and enriched crudes. (d) Gold content. (e) Includes also partly refined oil, topped crudes, enriched crudes and refinery feed stock.

Considerable quantities of metallic ores, concentrates, slags, and residues are exported from Australia for refining overseas. The following table shows selected items exported during 1970-71 and 1971-72 and their principal metallic content as estimated by assay.

(a) Includes copper matte, copper slags and residues and copper-lead dross and speiss.

## Prices

The following table shows average prices of some principal refined metals and ores and concentrates on Australian and certain major overseas markets. Prices of minerals such as iron ore, coal and bauxite are not shown, as these minerals are commonly sold on a contract basis rather than on an open market basis.

**AVERAGE DAILY PRICES OF SELECTED METALS AND METALLIC ORES AND CONCENTRATES: AUSTRALIAN AND OVERSEAS MARKETS, 1967-68 TO 1971-72**

(a) Where a daily price does not actually exist for a commodity, daily prices have been imputed from price data which are available. (b) £Stg per ton. (c) May and June 1968 only; prior to May 1968 there was no Australian premium market. (d) Not available owing to break in continuity of series; from April 1968 London Gold Market transactions have been in non-monetary gold only. (e) d Stg per f oz. (f) £Stg-ltu.

Details of monthly prices, and price specifications, relating to each commodity in this table, are contained in each issue of the monthly mimeographed bulletin *Minerals and Mineral Products* (10.19).

## REVIEW OF RECENT DEVELOPMENTS IN THE AUSTRALIAN MINERAL INDUSTRY

Prior to Year Book No. 52 it was customary to include a series of detailed reviews of the principal commodities produced by the Australian mineral industry and recent developments concerning these commodities. However, with the increasing diversification and development of the industry, it has become impractical to continue these reviews in the Year Book and the reader who wishes to obtain information of this kind is referred to *The Australian Mineral Industry—Annual Review* published by the Bureau of Mineral Resources, Geology and Geophysics. That publication contains comprehensive reviews of mineral commodities of importance to the Australian economy, as well as a general review of the industry's performance during each year. Major developments in the industry, particularly during the last year, are reviewed briefly in subsequent parts of this section.

Most sectors of the Australian mining industry reflected the improving world situation in 1972 and continued expansion of output of bauxite, black coal, copper, iron ore, nickel, and petroleum resulted in a record level of mine production. Although a new record was established in 1972 in the ex-mine value of minerals produced at about \$1,780 million, a rise of 7.8 per cent, there has been an easing in the rate of expansion of the industry in recent years. However, the operating rates of mining and processing facilities moved closer to full capacity during 1972.

### Bauxite

The history of the aluminium industry and recent significant developments in the industry were reviewed in previous issues of the Year Book (No. 51, page 1168 and No. 52, page 1048). The year 1972 was a period of continued growth in the industry both in mining and processing as detailed below.

In 1972 bauxite production capacity from deposits at Weipa, Queensland, increased to a rate of 10.5 million tons per annum following completion of a further stage in the development of the mine and associated township, and of ore treatment and loading facilities. Approximately 3 million tons from Weipa were used by the Gladstone, Queensland, alumina refinery in 1972, and the requirements of the small refinery at Bell Bay, Tasmania, are estimated as 120,000 tons yearly; the remaining production is available for export.

Bauxite deposits at Gove, Northern Territory, covering reserves of the order of 250 million tons of ore, are being developed by a consortium of seven Australian and one overseas companies. The consortium has commissioned an alumina plant at Gove with an initial capacity of 500,000 metric tons per annum to increase to 1,000,000 metric tons annually by mid-1973.

The Mitchell Plateau (Admiralty Bay, Kimberley area), Western Australian bauxite/alumina project has been postponed, chiefly because of the world recession in the industry in 1971 and 1972. The second bauxite/alumina project based on the Darling Range bauxites, involves an alumina refinery at Worsley, 140 miles south of Perth, and port facilities at Bunbury. The \$300 million project will see the expenditure of more than \$9 million on building a new railway and \$1.9 million on harbour development at Bunbury. The first stage of the alumina refinery at Worsley will be completed in 1977 and have an initial capacity of 350,000 tons per year. This will be expanded to 1.2 million and possibly eventually to 2 million tons per year. Bauxite reserves in the Mount Saddleback area have been reported as 240 million tons with an average grade of 32 per cent  $\text{Al}_2\text{O}_3$ . Mining will start at Bodlungton, about 80 miles south of Perth.

In the third bauxite/alumina project in Western Australia, bauxite will be mined from the Chittering area in the Darling Range, Western Australia, for an alumina refinery to be built near Muchea. Completion date for the refinery is January 1977 and initial annual production capacity will be 400,000 tons with eventual capacity at 1.2 million tons annually.

### Alumina

Expansion of the alumina refinery at Gladstone, Queensland, was completed by the end of 1968, increasing the capacity of the refinery to 900,000 tons per annum; the plant has since been expanded to 1,275,000 tons yearly and will be increased further to 2,000,000 tons per annum by late 1973. The alumina refinery at Kwinana, Western Australia, was expanded from 817,000 tons to 1,040,000 tons annually by July 1970 and to 1,250,000 tons by the end of 1970. Bauxite supplies for the Kwinana refinery are obtained from deposits 30 miles away at Jarrahdale, Western Australia, the reserves of which are assessed as at least 500 million tons. A new alumina plant was also commissioned at Pinjarra, Western Australia, in May 1972, with an initial production capacity of 210,000 tons yearly. An alumina plant, with a capacity of 1,600,000 tons annually, is planned at Weipa in 1976.

### Copper

Copper production at Mount Isa will be increased to a rate of 153,000 tons yearly in 1973. The expansion program provides for a new hoisting shaft, extensions to the existing copper smelter and a new concentrator, as well as enlargement of ancillary facilities.

A new copper-gold ore body at Warrego has been developed near Tennant Creek, Northern Territory. The first stage of development cost \$21 million; it has an installed mining capacity of 500,000 tons of ore per annum and production commenced in 1973.

Since the beginning of 1967 the Australian producers' price has been adjusted regularly to reflect movements in the London Metal Exchange daily settlement price. From January to June 1972 the Australian price ranged from 41–45 cents per pound (\$918.40–\$1,008.00 per ton). On 1 July 1972 a new method of quotation was adopted and the price remained at \$925.94 per tonne (42 cents per pound) until 11 February 1973 when it rose, reaching \$1,100 per tonne on 22 March 1973.

### Iron

The major development of recent years has been the establishment in Australia of a large scale iron ore export industry based principally on steelmaking requirements in Japan. Exports of iron ore and iron ore pellets in 1971–72 to Japan and elsewhere were 49 million tons valued at \$375 million.

Commercial output from Paraburdoo, originally scheduled for 1972, was postponed until 1973 because of a reduced demand for ore.

A \$10 million expansion of the Robe River mining operation will be implemented in 1973, one year ahead of schedule. Export of Robe River iron ore fines and pellets from Cape Lambert commenced in 1972 and shipments are expected to increase to an annual rate of 6.1 million tons of fines and 4.2 million tons of pellets by 1975. At Mount Whaleback expansion of iron ore production and shipment capacity will proceed to reach 30 million tons per year by the end of 1973. Shipments of ore from the Mount Goldsworthy group of mines were expected to increase to an annual rate of 8 million tons after April 1973 following the opening of the Shay Gap and Sunrise Hill mines. A 43-mile railway extension has been constructed from Mount Goldsworthy to Shay Gap rail-head.

### Lead and zinc

Production of lead metal rose in 1972. Metal production should rise in 1973 and there may be a surplus. Supply and demand for zinc metal in 1973 should be balanced.

The South Mine at Broken Hill was not operating profitably and ore production was terminated in July 1972; retreatment of residue dumps continued. The mine was purchased by another company in October 1972.

Lead production at the reduced rate adopted in 1971 continued at Mount Isa but zinc concentrate production increased because of the higher zinc content of ore treated.

A record tonnage of zinc metal was produced in 1971–72 at the Risdon (Tasmania) refinery on completion of the expansion program. Output is expected to reach 185,000 tons in 1972–73.

### Black coal

There has been a significant revival in the Australian black coal industry in recent years as a result of increased exports and increased consumption of black coal in iron and steel production and electricity generation. These increases have more than balanced reduced consumption in some applications due to competition from fuel oil.

The expansion of the export trade has been of major significance. In 1955 exports were about 200,000 tons valued at about \$1.7 million; in 1972 exports were 23.1 million tons valued at \$269 million. These increased exports have been largely to Japan for use in the iron and steel industry. As a result of this increased demand, new mines have been opened and others are under development in Queensland and New South Wales, and many established mines are being expanded. Exploration for coal has been stimulated and further rich deposits of coking coal have been located, particularly in Queensland.

### Petroleum

At the end of 1972, there were seven Australian oil fields in production, namely, Moonie, Alton and Bennett, Queensland; Barrow Island, Western Australia; and Barracouta, Kingfish, and Halibut in the Gippsland Shelf area offshore from Victoria. In addition, a small amount of oil is being produced from several other wells in the Surat Basin in Queensland. In 1969 commercial and domestic

use of natural gas began in Brisbane, Melbourne and Adelaide and in late 1971, in Perth. The production of crude oil in 1972 from the Australian oil fields was 119 million barrels representing some 64 per cent of the country's requirement of refinery feedstock. The cumulative production of crude oil to 31 December 1972 amounted to 340 million barrels.

In 1972 gas discoveries were made at various locations in the Cooper Basin in South Australia and Queensland, and at Big Lake and Fly Lake in South Australia. Additional discoveries were also made at Goodwyn, North Rankin, and Angel on the northwest continental shelf of Western Australia. Additional oil discoveries were made at Tirrawarra in the Cooper Basin, Goodwyn and Eagle Hawk on the North-west Shelf and Mackerel in the Gippsland Basin offshore from Victoria. The provisional figure for footage drilled in petroleum exploration and development in Australia in 1972 was 971,387 feet which is some 210,573 feet (about 28 per cent) more than the footage drilled in the previous year. About 735,491 feet of the 1972 total was attributable to exploration drilling of which 388,151 feet were drilled offshore. A total of 135 wells were completed in 1972, of which 99 were exploration wells, 38 of them offshore. In comparison with the previous year there was a rise of 14 in the number of exploration wells and a decline of 15 development wells in 1972. There was a rise of 24 in the number of offshore exploratory wells which also made a significant contribution to the rise in drilling activity. Of the exploration wells drilled, 1 was completed as a potential oil producer and 9 as gas producers; of the development wells, 3 were oil producers and 23 gas producers.

### Nickel

Output from Australia's major nickel mining operation at Kambalda in Western Australia has grown to more than 35,000 tons of contained nickel per annum since mining commenced in 1967. Mines at Nepean and Scotia also commenced production in early 1969 and that at Windarra will commence production in 1974; mines have been developed at Carr Boyd Rocks and in the Widgiemooltha area and it is possible that one will be developed at Redross in 1974. At the end of 1972 the refinery at Kwinana, Western Australia, was producing more than 15,000 tons of nickel metal per annum from concentrates; the remaining concentrates will continue to be exported until further smelting and refining facilities are constructed. The flash smelter commissioned at Kalgoorlie in December 1972 will be capable of processing 209,000 tons of concentrate a year. Capacity will be increased by 75 per cent when certain modifications are made. The matter produced is feed for the Kwinana refinery and overseas refineries.

Plans have been drawn for the development of the lateritic nickel deposit at Greenvale in northern Queensland. Following the successful completion of pilot plant tests, construction of a railway and an ammonia leach treatment plant at Townsville, northern Queensland, were commenced in early 1972. Production of 23,000 tons of nickel oxide sinter per annum could commence during 1974.

### Mineral sands

The history of the mineral sands industry and an assessment of resources is presented in the *Australian Mineral Industry—Quarterly Review* Vol. 25 No. 1.

The first mineral sand separation plant at Eneabba, Western Australia, commenced production in early 1973. The initial capacity is 7,000 tons of rutile, 15,000 tons of zircon and 28,000 tons of ilmenite per year. If this initial plant demonstrates the viability of a large-scale operation, a plant may be built with production capacity at an annual rate of 50,000 tons of rutile, 100,000 tons of zircon and 200,000 tons of ilmenite. A second plant with a capacity of 240,000 tons per year, at a cost of \$10 million, is planned and two other companies are carrying out testing programs and feasibility studies in the Eneabba area.

The ilmenite beneficiation plant at Capel, Western Australia, which has operated on a semi-commercial scale since 1968 is being extended to produce 40,000 tons of upgraded ilmenite per year. A plant for the upgrading of ilmenite is being built at Bunbury, Western Australia.

### Phosphate

Major deposits of phosphate rock were discovered during 1966 near Duchess and Lady Annie in north-west Queensland. The deposits are large by world standards, and feasibility studies are still in progress. Survey work has been finished on a possible railway route between Lady Annie and the Gulf of Carpentaria, 800 miles away. Transport and port facilities will be key factors in determining whether the project is to be undertaken.

## CHAPTER 27

# ELECTRIC POWER GENERATION AND DISTRIBUTION

This chapter is divided into three major parts: the Introduction, which deals briefly with the resources, generation and distribution, and future development of electric power in Australia; the Snowy Mountains Hydro-electric Scheme; and the origins, development, present situation and new projects of electrical systems in each Australian State and internal Territory.

The information contained in the chapter relates to situations existing and projects contemplated in June 1973, and may be considerably affected by changes in policy or plans, or by developments in the projects themselves. Greater descriptive and historical detail about the various systems is contained in earlier issues of the Year Book. Statistics on the electricity industry are included in tables in Chapter 21, Manufacturing Industry.

## INTRODUCTION

### Distribution of population and location of electric power resources in Australia

The two principal centres of population and industry in Australia, the metropolitan areas of Sydney and Melbourne, make the greatest demands for electric power, and their growth has been associated with the development of large deposits of coal located relatively close to the source of demand. This, together with the fact that the major water resources are also located in the south-eastern portion of Australia, materially influences the distribution of industrial population and the location of major electric power stations. By far the most important source of energy used in the production of electric power in Australia is coal. At 30 June 1972 thermal power equipment represented 71.6 per cent, hydro plant 26.0 per cent, and internal combustion and gas turbine equipment 2.4 per cent of the total installed generating capacity.

Most of Australia is poorly supplied with water, only about 13 per cent receiving an annual rainfall of 30 inches or over, and these areas are confined largely to Tasmania and to the narrow coastal strip along the east coast of the mainland. The only region on the mainland of Australia high enough to receive reliable winter snowfall, and from which, therefore, reasonably constant water supplies throughout the year can be expected, is the mountain chain which stretches from the high plateaux of south-eastern New South Wales to the north-eastern highlands of Victoria. The hydro-electric potential of this area is considerable, and plans have been formulated to develop more than 4,000,000 kW by 1975. The two major construction projects in this area are the Snowy Mountains and Kiewa schemes. Other hydro-electric potential does exist on the mainland on the rivers of the coastal areas of New South Wales and Queensland, but the amount available is smaller than the potential of the Alpine region. In Tasmania, hydro-electric resources have been estimated at about 50 per cent of the total Australian hydro-electric potential. On the mainland the chief source of energy is coal; in Tasmania it is water.

### Electric power generation and distribution

At the beginning of this century Australia's electrical undertakings were carried on mainly by private enterprise, but with some measure of government control designed to provide standards of safety and to define the scope and obligations of the private organisations. A trend towards public ownership commenced during the 1914-18 War and became more pronounced after the 1939-45 War. By 1961 all major generating stations supplying the public were, in varying degrees, under the control of statutory organisations constituted with the object of unifying and co-ordinating the generation and distribution of electricity supplies. There are still a large number of small private and municipal enterprises generating power for supply to country towns, although central authorities are extending supply to these places wherever practicable. In many areas it has been, and remains, the practice for central authorities to sell power in bulk to local distributing organisations which undertake reticulation.

In addition to the private, local government and statutory organisations which generate and or distribute electricity for sale, numerous firms generate power for use in their own establishments, particularly those engaged in mining remote from the main centres of population. This chapter, however, is concerned mainly with the activities of central electric stations, as the power regularly

produced for such internal consumption is, in any case, a relatively small proportion of the total power produced. The measures taken by authorities to satisfy the demand created by the post-war growth in population and building and by developments in industry and commerce are described in the following pages.

## SNOWY MOUNTAINS HYDRO-ELECTRIC SCHEME\*

### Snowy Mountains Hydro-electric Power Act 1949-1958

In July 1949 the Commonwealth Government established the Snowy Mountains Hydro-electric Authority, and empowered it to generate electricity by means of hydro-electric works in the Snowy Mountains Area; supply electricity to the Commonwealth (i) for defence purposes, (ii) for consumption in the Australian Capital Territory; and supply to a State, or to a State Authority, electricity not required for defence purposes or for consumption in the Australian Capital Territory.

The Snowy Mountains Act is supported by a detailed agreement between the States of New South Wales and Victoria and the Commonwealth with regard to the construction and operation of the Scheme, the distribution of power and water, charges to be made for electricity, and other such matters. The Snowy Mountains Council, established under the terms of the Agreement and consisting of representatives of the Commonwealth, the Authority and the two States, directs and controls the operation and maintenance of the permanent works of the Authority and the allocation of loads to generating stations.

### Snowy Mountains Hydro-electric Scheme

The broad basis of the Snowy scheme is to transfer waters, which would otherwise flow to the sea unharnessed, from the Snowy River and its tributaries to the inland system, so that the water may be used for irrigation and to provide power. It involves two main diversions, the diversion of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River, and the diversion of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. These two diversions divide the scheme geographically into two sections, the Snowy-Tumut Development and the Snowy-Murray Development (*see* plate 53 opposite). For purposes of both power production and irrigation it is necessary to regulate run-off, and this is achieved by the use of Lake Eucumbene (formed by the construction of Eucumbene Dam) and other storages to control the waters of the Eucumbene, Murrumbidgee, Tooma, and Tumut Rivers for the Snowy-Tumut Development and of the Snowy and Geehi Rivers for the Snowy-Murray Development. A sectional diagram of the scheme appears on plate 54, page 958.

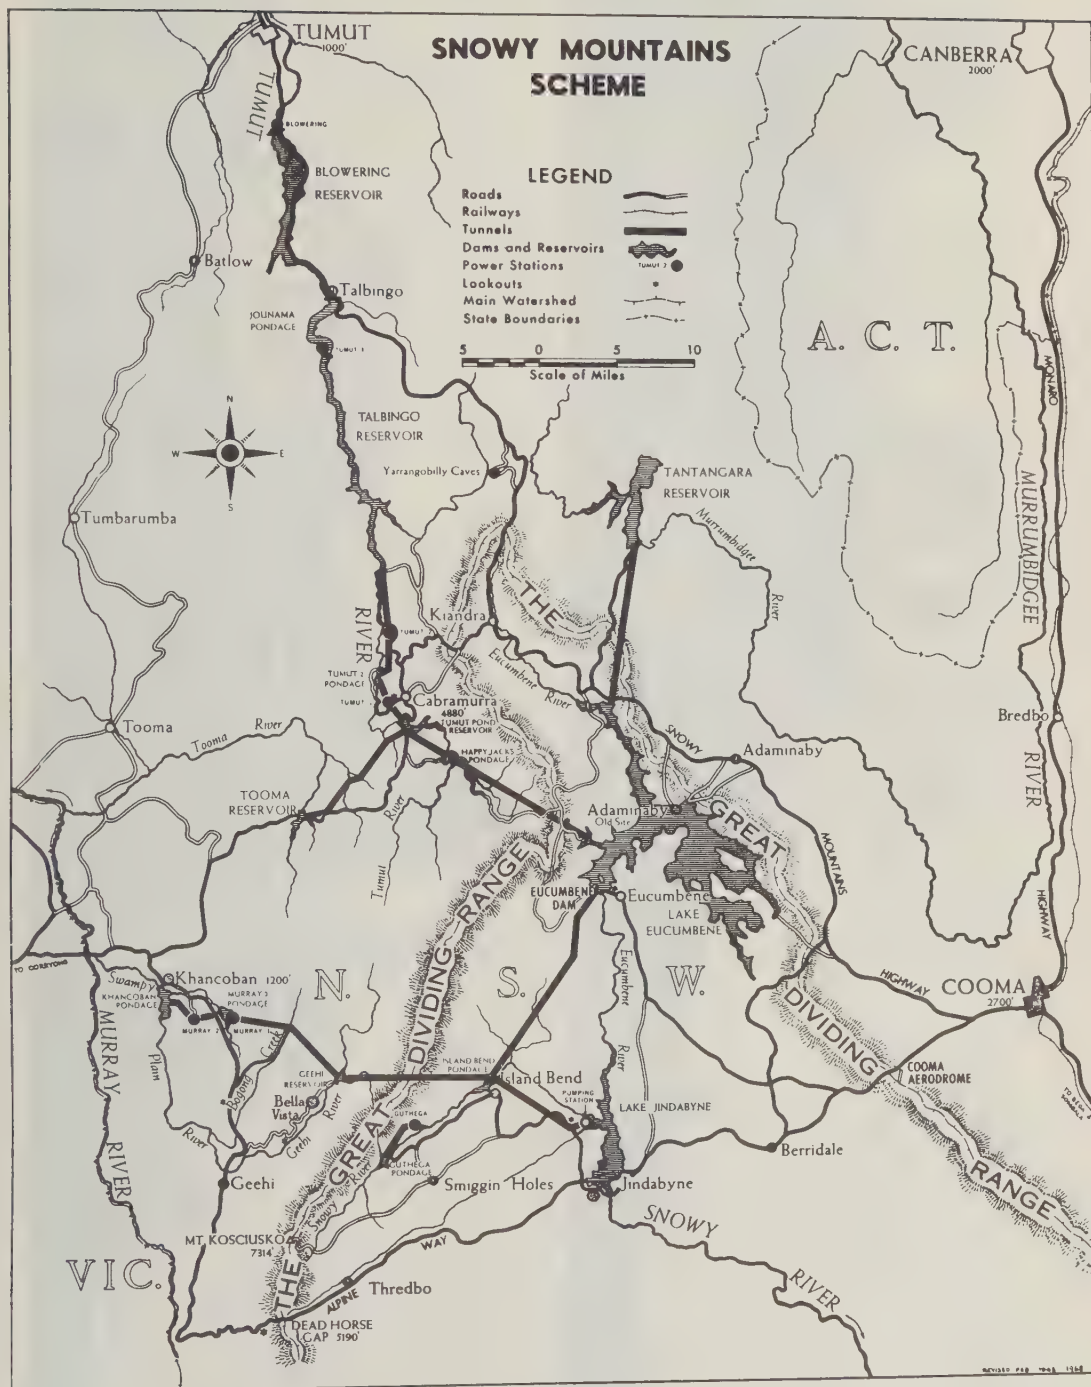

*Snowy-Tumut Development.* This development comprises works for the diversion and regulation of the waters of the Eucumbene, Upper Tooma, Upper Murrumbidgee, and Upper Tumut Rivers and their combined development through a series of power stations down the Tumut River. A major dam has been constructed on the Eucumbene River to create Lake Eucumbene, which has an ultimate usable storage of 3.5 million acre feet. The waters of the Upper Murrumbidgee River are diverted into Lake Eucumbene by a dam at Tantangara and a 10½-mile tunnel from Tantangara Reservoir. From Lake Eucumbene the water flows through a 14-mile tunnel to Tumut Pond Reservoir on the upper reaches of the Tumut River, where it joins the waters of the Tumut River itself and the waters of the Tooma River diverted to Tumut Pond Reservoir by a diversion dam and a 9-mile tunnel.

From Tumut Pond Reservoir water is conveyed by pressure tunnel to Tumut 1 underground Power Station (capacity 320,000 kW), returned to the Tumut River and then by another pressure tunnel to Tumut 2 underground Power Station (capacity 280,000 kW), thence discharging into Talbingo Reservoir, also on the Tumut River.

Tumut 3 Power Station, the largest station of the scheme (generating capacity 1,500,000 kW and pumping capacity 10,500 cubic feet per second) has been constructed below Talbingo Reservoir and discharges into Jounama Pondage on the Tumut River. This pondage provides a downstream pumping pool and also regulates discharges from Tumut 3 Power Station as required. Releases from Jounama Pondage then enter Blowering Reservoir formed by Blowering Dam. This dam, constructed by the Snowy Mountains Authority as an agent for the State of New South Wales, provides for the regulation of power station discharges for irrigation use in the Murrumbidgee Valley. The Authority has constructed a power station at the foot of the dam to generate power from releases of water for irrigation purposes.

*Snowy-Murray Development.* The principal features of the Snowy-Murray Development are the diversion of the main stream of the Snowy River by tunnels, shafts, and pipelines westwards through

\* *See also* Chapter 23 Water Conservation and Irrigation of this issue and special detailed article in Year Book No. 42, pp. 1103-30.

PLATE 54

the Great Dividing Range into the Swampy Plain River in the catchment of the Upper Murray, and the development of power on the western slopes of the Alps. The main works of the development are as follows.

- (a) A tunnel from the Snowy River near Island Bend through the Great Dividing Range to Geehi Reservoir on the Geehi River, and two power projects between Geehi Reservoir and the Swampy Plain River near Khancoban. The power stations associated with these two power projects, Murray 1 and Murray 2, have a combined capacity of 1,500,000 kW.
- (b) A tunnel from a dam on the Snowy River near Island Bend to Eucumbene Dam to carry Snowy water to Lake Eucumbene for storage at times of high river flows. When river flows are lower than average, this stored water is returned towards Island Bend and thence through the Snowy-Geehi Tunnel to Geehi Reservoir and Murray 1 and Murray 2 Power Stations.
- (c) A dam on the Snowy River near Jindabyne to store the residual flow of the Snowy and Eucumbene Rivers downstream from Island Bend and Eucumbene Dams, including the flows of major tributaries, the Crackenback and Mowamba Rivers; and a pumping plant, pipeline and tunnel to lift this water from Jindabyne Reservoir to the Snowy-Geehi Tunnel near Island Bend, where it joins the flow to the Geehi Reservoir for use through Murray 1 and Murray 2 Power Stations.

The power output of this section of the Scheme is increased by the Guthega Project, a subsidiary hydro-electric project on the Upper Snowy River above Island Bend with a generating capacity of 60,000 kW.

#### Utilisation of power from scheme

The future electric power plants on the mainland of Australia will be predominantly thermal or thermo-nuclear installations, and in an electrical system in which the greater part of the energy is generated in thermal plants it is usually found that the hydro installations operate to the best advantage on peak load. However, the existing New South Wales and Victorian systems include a proportion of relatively old and less efficient installations which, for reasons of fuel economy, are also best used for the production of peak load power. Therefore, in order to utilise the potential of the Snowy Mountains Scheme most effectively, the order of development was arranged so that the early stations operated, initially, somewhat below the peak of the system load, with a progressive change to predominantly peak load operation as construction proceeded and as the load increased in magnitude.

The Snowy Mountains Scheme is situated about midway between the principal load centres of Sydney and Melbourne and is connected to those cities by 330 kV transmission lines. It is, consequently, in a position to take advantage of the diversity in the power requirements of these two load systems, a most important factor in so far as it affects the economy of operation of the supply systems of the two States. Although most of the output from the scheme will go to the States of New South Wales and Victoria, the Commonwealth Government has the right to draw from the scheme its requirements of power and energy for the Australian Capital Territory and for defence purposes. For convenience, the Commonwealth's requirements are drawn from the New South Wales transmission network by an exchange arrangement between the Commonwealth and the Electricity Commission of New South Wales. Electricity over and above that required by the Commonwealth Government is divided between the States of New South Wales and Victoria in the ratio 2:1.

#### Progress of scheme and future programme

The scheme's first power station, Guthega, of 60,000 kW capacity, came into operation in February 1955. It was followed by Tumut 1, an underground power station with a capacity of 320,000 kW, in 1959, and by the 280,000 kW Tumut 2 underground Power Station in 1962. Eucumbene Dam, which provides the major regulating storage for the scheme, was completed in May 1958. Tumut Pond Dam, completed in September 1958, provides the balancing storage for the power stations of the Upper Tumut Works. The first trans-mountain diversion of water from Lake Eucumbene to the Tumut River at Tumut Pond was made possible when the 14-mile Eucumbene-Tumut Tunnel was completed in June 1959. The 10½-mile Murrumbidgee-Eucumbene Tunnel and the 9-mile Tooma-Tumut Tunnel came into operation early in 1961. Following the completion of the Upper Tumut Works, construction activity was concentrated on the Snowy-Murray Development. The first unit of this development, the Eucumbene-Snowy project which comprises Island Bend Dam and the 15-mile Eucumbene-Snowy Tunnel, commenced diverting Snowy River water to storage in Lake Eucumbene in August 1965. Completion of a 9-mile trans-mountain Snowy-Geehi Tunnel, the 7½-mile Murray 1 Pressure Tunnel, the first of the 1-mile long Pressure Pipelines, and the first two units of the 950,000 kW Murray 1 Power Station in April 1966 allowed the first diversion of the water from the Snowy River to the Murray River in the west. All of the ten turbo-generators were brought into commercial operation with the opening of the Murray 1 Project in July 1967.

Khancoban Dam, designed to regulate power station releases before their discharge into the Murray River, was completed in February 1966. The Murray 2 Project in the base of the open cut excavated in the bank of Khancoban Reservoir downstream of Murray 1 Project was completed in 1969. The four units of Murray 2 Power Station totalling 550,000 kW came into commercial operation in October 1969. Construction is also complete on the Jindabyne Project. The earth and rockfill dam was completed in September 1967, and the pumping station and Jindabyne-Island Bend Tunnel came into service in February 1969.

Blowering Dam on the Tumut River came into service in May 1968, and the 80,000 kW Blowering Power Station began commercial operation in August 1971.

The total installed capacity of the scheme has now reached 2,224,000 kW.

For the Tumut 3 Project the construction of Jounama Dam was completed in 1968 so that the storage of water in Blowering Dam could commence. Talbingo Dam was completed in October 1970 and Tumut 3 Power Station was officially opened in October 1972 with two generators in operation. The succeeding four generators will be brought into service to achieve full operation in 1974.

## STATES AND TERRITORIES

### New South Wales

In Year Book No. 39 an account was given in some detail of the origin and development of electricity generation and distribution in New South Wales. At present the following four Acts govern electricity supply in New South Wales.

The Local Government Act, 1919, which lays down the various rights and responsibilities of local government bodies in the establishment and operation of electricity trading undertakings.

The Gas and Electricity Act, 1935, established the Sydney County Council which is responsible for the distribution of electricity in a large part of the Sydney metropolitan area. The Act also amended the Local Government Act in certain respects.

The Electricity Development Act, 1945, which established the Electricity Authority of New South Wales as the body responsible for the co-ordination of electricity supply throughout the State.

The Electricity Commission Act, 1950, which constituted the Electricity Commission of New South Wales as the major generating authority and not subject to the provisions of the Electricity Development Act.

#### Electricity Commission of New South Wales and electricity supply authorities

The main function of the Commission is the generation and transmission of electricity, which it sells in bulk to distributing authorities (mainly local government bodies) throughout a large part of the State, to the Government railways and to certain large industrial consumers. As the major generating authority, it is also responsible for the development of new power sources except in the Snowy Mountains region.

The retail sale of electricity to the public is, in general, carried out by separate electricity supply authorities. At 30 June 1972 there were 41 retail supply authorities throughout the State, comprising 34 electricity county councils (consisting of groups of shire and/or municipal councils), 2 city and 2 municipal councils, 1 shire council, and 2 private franchise holders. In addition to the Electricity Commission, 2 coal companies supply electricity in bulk to retail supplying authorities. Most of the small power stations which had operated in many country centres have closed down as the main transmission network has been extended.

Most electricity distribution areas have been consolidated into county districts consisting of a number of neighbouring local government areas grouped for electricity supply purposes, and administered by a county council comprising representatives elected by the constituent councils. Of the 225 cities, municipalities and shires in New South Wales, 217 are included in one or other of the 34 electricity county districts.

#### The Electricity Authority of New South Wales

The Electricity Development Act, 1945, confers broad powers on the Electricity Authority to co-ordinate and develop the public electricity supply industry. The functions of the Authority include the promotion of the use of electricity and especially its use for industrial and manufacturing purposes and for primary production. Technical advice is given to retail electricity supply authorities on various aspects of their activities such as the framing of retail electricity tariffs, public lighting and standardisation of materials and equipment. The Authority acts in an advisory capacity to the Minister for Mines and Power on electricity distribution matters generally, and may make recommendations concerning the organisation of distribution, the amendment of the law relating to the generation, transmission, distribution and supply of electricity, or on any other matters affecting the electricity distribution industry.

The Authority administers the Rural Electricity Subsidy Scheme under which the rural electrical development of the State has now been virtually completed where the extension of supply is economically feasible. Under the subsidy scheme, local electricity suppliers receive subsidies from the Authority towards the cost of new rural lines. At 30 June 1972 the Authority was committed to the payment of \$36,977,558 in subsidies, of which \$28,389,374 had been paid. Further details of the operation of the scheme are given on page 956, Year Book No. 56.

The Electricity Development Act contains provisions for the making of regulations relating to most aspects of electrical safety. Regulations now in force cover such matters as consumers' installations, licensing of electricians and electrical contractors, approval of electrical articles, safety of linesmen, and overhead line construction and maintenance. In addition, a number of aspects not governed by legislation are covered by codes of practice or recommended procedures.

The Authority also administers the Traffic Route Lighting Subsidy Scheme, which provides for financial assistance to councils towards the cost of installation of improved lighting on traffic routes traversing built-up areas with the objective of reducing the incidence of night road accidents. Since the introduction of the scheme in 1964, subsidy has been approved in respect of some 686 miles of traffic routes throughout the State.

### Generation and transmission

Of the State's electrical power requirements during the year ended 30 June 1972, 84.2 per cent was generated by coal fired power stations in New South Wales, 0.3 per cent by internal combustion plants, 14.3 per cent by hydro-electric stations (including 11.6 per cent obtained direct from the Snowy Mountains Scheme). Interstate imports accounted for 1.2 per cent of the State's electricity requirements.

*Major generating stations.* At 30 June 1972 the major power stations of the State system of the Electricity Commission of New South Wales and their effective capacities were as follows: Liddell (Hunter Valley), 1,000,000 kW; Munmorah (Tuggerah Lakes), 1,400,000 kW; Vales Point (Lake Macquarie), 875,000 kW; Bunnerong (Sydney), 375,000 kW; Wangi (Lake Macquarie), 330,000 kW; Tallawarra (Lake Illawarra), 320,000 kW; Wallerawang (near Lithgow), 240,000 kW; Pyrmont (Sydney), 200,000 kW. The total effective capacity of the Electricity Commission's system as at 30 June 1972 was 5,392,000 kW. The greater part of the Commission's generating plant is concentrated within a hundred mile radius of Sydney.

*Major transmission network.* The retailing of electricity to 97 per cent of the population of New South Wales is in the hands of local distributing authorities, which obtain electricity in bulk from the Commission's major State network. This network of 330 kV, 132 kV, 66 kV and some 33 kV and 22 kV transmission lines, links the Commission's power stations with the load centres throughout the eastern portions of the State, extending geographically up to 400 miles inland.

At 30 June 1972 there were in service 1,453 route miles of 330 kV and 3,369 miles of 132 kV transmission lines (including 116 miles operating for the time being at 66 kV). There were also in service 2,712 miles of transmission line of 66 kV and lower voltages, and 102 miles of underground cable. The installed transformer capacity at the Commission's 148 sub-stations was 19,446,950 kVA.

*Separate systems and total State installed capacity.* Several local government bodies operate their own power stations and generate portion of their requirements which is supplemented by inter-connection with the system of the Electricity Commission. Of these the more important are the Northern Rivers County Council (installed capacity 28,750 kW) and the North-West County Council (15,000 kW). In addition a private company operates small stations supplying the towns of Ivanhoe and Wilcannia. The aggregate effective capacity for the whole of New South Wales systems and isolated plants was 5,425,325 kW at 30 June 1972 and the number of ultimate consumers at this date was 1,657,022.

### Future development

The major new thermal stations already built and those now being developed on the coalfields will become the main base load supply sources for the State. Munmorah, located between Lakes Munmorah and Budgewoi, Vales Point and Wangi, on Lake Macquarie, Wallerawang, near Lithgow, and Tallawarra, on Lake Illawarra, have been completed.

The first 500,000 kW generating unit of the Liddell Power Station in the Hunter Valley was commissioned in 1971, followed by the second in 1972 and the third in 1973. The fourth will follow in 1974, making a total capacity of 2,000,000 kW.

Future projects include the installation of an additional 500,000 kW unit at Wallerawang, scheduled for commissioning in 1975-76 and two 660,000 kW units at Vales Point required for operation in the late 1970's.

The development of the 330 kV main system is continuing. New work in hand includes the construction of major 330 kV transmission lines from Lower Tumut to Canberra, Canberra to Dapto, Liddell to Newcastle, and a new 330 kV substation, Sydney East. Other work is in progress and being planned throughout the State to augment the transmission system.

### Hydro-electricity

The greater part of the hydro-electric potential of New South Wales is concentrated in the Snowy Mountains area (see Snowy Mountains Hydro-electric Scheme, page 956). Apart from this area, major hydro-electric stations are in operation at the Warragamba Dam (50,000 kW), Hume Dam (50,000 kW) and Burrinjuck Dam (20,000 kW). There are, in addition, five smaller hydro-electric installations in operation in various parts of the State. A pumped-storage hydro-electric system to produce 240,000 kW by 1976, is being installed as part of the Shoalhaven Scheme in conjunction with the Metropolitan Water Sewerage and Drainage Board.

## Victoria

In Year Book No. 39 a detailed description is given of the development of electricity generation in the cities of Melbourne, Geelong, Bendigo and Ballarat up to the time of transfer of control of electricity undertakings in those cities to the State Electricity Commission of Victoria. An account is also given of the events culminating in the establishment of the Commission in 1919, and of the early developments in the Commission's undertakings.

### State Electricity Commission of Victoria

Constituted by the *Electricity Commissioners Act* 1918, the State Electricity Commission is a semi-government authority administered since 1921 by a full-time Chairman and three part-time Commissioners. The principal duty of the Commission is to co-ordinate and extend on an economic basis the supply of electricity throughout Victoria. For this purpose it is vested with power to erect, own and operate power stations and other electrical plant and installations, supply electricity retail to individual consumers or in bulk to any corporation or public institution, acquire and operate electricity undertakings, develop, own and operate brown coal open cuts and briquetting works, and develop the State's hydro-electric resources. From its own revenues, which it controls, the Commission must meet all expenditure in the operation of its power and fuel undertakings and provide for statutory payments to State Consolidated Revenue.

The Commission is the controlling authority for all electrical undertakings in Victoria. It is responsible for the registration of electrical contractors, the licensing of electrical mechanics, the control of installation methods and material, and the testing and approval of electrical equipment and appliances.

Since it began operating in 1919 the State Electricity Commission has expanded and co-ordinated the production and supply of electricity on a State-wide basis to the point where its system now generates almost all the electricity produced in Victoria. Victoria's electricity system is based on the utilisation of the extensive brown coal resources of the Latrobe Valley in Gippsland.

Output of brown coal in 1971-72 from the Commission's three open cuts at Yallourn, Morwell and Yallourn North totalled 22,237,000 tons, of which 18,434,000 tons were used in the Commission's power stations. A further 3,493,000 tons of brown coal were used to manufacture 1,303,000 tons of briquettes, of which 258,000 tons were burnt in power stations. The only other fuel used in power generation was 44,000 tons of oil.

Generation in thermal stations is supplemented by energy from the Commission's hydro stations in the mountains north-east of the State, and by hydro entitlements from the Snowy Mountains Scheme (one-third of the output after provision of the Commonwealth's needs) and Hume Power Station (half of the output).

### Electricity Supply

At 30 June 1972 the number of ultimate consumers in Victoria was 1,324,000 all served by the Commission except the extreme eastern settlements of Bendoc and Bonang (supplied from an adjoining area of New South Wales).

The Commission sells electricity retail in all Victorian supply areas except for eleven metropolitan municipalities. These municipalities, retailing electricity under franchises granted before the Commission was established, take bulk supply from the Commission. Bulk supply is also provided to several New South Wales municipalities and irrigation settlements bordering the River Murray.

The Commission's retail consumers numbered over 1,077,000 at 30 June 1972. Of these some 904,000 were domestic, 80,000 industrial and 93,000 commercial. Retail supply is administered through the metropolitan branch and nine extra-metropolitan branches with headquarters at Geelong, Dandenong, Taralgon, Mildura, Ballarat, Benalla, Bendigo, Colac and Horsham. Branch and district supply offices are located in Melbourne and all other major cities and towns in Victoria.

Complete electrification of the State has virtually been achieved. By 30 June 1972 over 1,100,000 homes and 74,000 farms were supplied with electricity. Only a few remote areas remain out of reach of public supply mains.

### **Electricity production, transmission and distribution**

Electricity generated in the State system or purchased by it totalled 14,641 million kWh in 1971-72. The system comprises a series of thermal and hydro-electric power stations. Inclusive of generator capacity both within the State and available to the Victorian system from outside the State, the total installed generator capacity at 30 June 1972 was 3,719 MW. Power stations are interconnected and feed electricity into a common pool for general supply. The major power station in the interconnected system is the Hazelwood brown coal burning power station near Morwell, which alone generates over 50 per cent of Victoria's electricity. Hazelwood, now completed, has eight 200 MW generating sets in service. Other power stations in the interconnected system comprise two further base load brown coal burning power stations, Morwell and Yallourn; steam stations in Melbourne (Newport, Richmond and Spencer Street), and Red Cliffs, which has, in addition, some internal combustion plant; and hydro-electric stations at Kiewa, at Eildon, on the Rubicon and Royston Rivers near Eildon, and at Cairn Curran. All generators for public supply within Victoria are Commission-owned, except Spencer Street Power Station, which remains the property of the Melbourne City Council, although operated as a unit of the interconnected system. The Victorian system is linked with the Snowy Mountains Scheme by a 330 kV transmission line, which also allows the interchange of energy between New South Wales and Victoria. The hydro station at Hume Dam on the River Murray is also linked with the Victorian interconnected system. Output and operating costs of this power station, owned by the Electricity Commission of New South Wales, are shared equally by the Electricity Commissions of Victoria and New South Wales.

The electrical transmission and distribution system in the State supply network at 30 June 1972 comprised over 63,000 miles of power-lines, 30 terminal receiving stations, 164 zone sub-stations, and more than 65,000 distribution sub-stations. Main transmission is by 500 kV, 330 kV, 220 kV, and 66 kV power lines which supply the principal distribution centres and also provide interconnection between the power stations. The 500 kV, 330 kV and 220 kV systems total over 2,000 route miles.

### **Future development**

Yallourn 'W' Power Station, now under construction, is located about half a mile west of the present Yallourn Power Station. Its capacity will be provided by four 350 MW turbo-generators. The first two units are scheduled for service in 1973 and 1974 and the third and fourth units in 1979 and 1980. A natural gas-fired power station of 1,000 MW capacity is under construction adjacent to the existing Newport Power Station. It will have two 500 MW generating units, the first to be in service in 1976, the other in 1978. A 150 MW hydro station associated with an irrigation dam at Dartmouth is planned to be in operation during 1979.

## **Queensland**

In Year Book No. 39 an account is given of the growth of electricity generation in Queensland, with particular reference to south-eastern Queensland, and of the events leading up to the establishment in 1937 of the State Electricity Commission of Queensland. In Year Book No. 53 an account is given of the post-war development and organisation of the electricity supply in Queensland.

Electricity supply in Queensland is governed by the following Acts which are administered by the Commission.

*'The State Electricity Commission Acts, 1937 to 1965.'* These Acts constituted the Commission and define its powers and duties.

*'The Electric Light and Power Acts, 1896 to 1967.'* These Acts relate to the constitution of electric authorities, except the Southern Electric Authority and the Northern Electric Authority, and define their powers and duties and the conditions under which electricity is to be supplied and used.

'*The Regional Electric Authorities Acts, 1945 to 1964.*' These Acts provide for the constitution of Regional Electricity Boards representative of the Commission and the Local Authorities within each region, and define their powers and responsibilities.

'*The Southern Electric Authority of Queensland Acts, 1952 to 1964.*' These Acts established the Southern Electric Authority and define the powers and responsibilities of the Authority.

'*The Northern Electric Authority of Queensland Acts, 1963 to 1964.*' These Acts established the Northern Electric Authority. They also define its powers and responsibilities.

'*The Electrical Workers and Contractors Acts, 1962 to 1971.*' These Acts provide for the certification of electrical workers and for the licensing of electrical contractors.

### State Electricity Commission of Queensland

The Commission commenced to function in January 1938. The Commission is the statutory authority concerned, *inter alia*, with the administration of electricity supply legislation, the general control, organisation and efficient development of the electricity supply industry in Queensland, the forward planning of such development, the control of electricity charges, the administration of regulations and rules relating to safety, the raising of capital, the provision of engineering and consulting services, the promotion of the use of electricity, particularly in manufacturing and rural industries, and the fixing of standards. In addition, it is an authority to which consumers may appeal on matters in dispute between them and their electric authorities. The Commission is also empowered to own and operate generating stations and transmission lines and to sell electricity in bulk.

### Organisation

Regional electrification, with centralised generation and main transmission, is the predominant feature of the organisation of the electricity supply industry in Queensland. The more populous eastern part of the State is served by three major networks.

The southern network embraces the areas of supply of the Southern Electric Authority, the Brisbane City Council, the Wide Bay-Burnett Regional Electricity Board, and the Dalby Town Council. Generation and main transmission in this area are the responsibility of the Southern Electric Authority, which sells energy in bulk to the other three Authorities. The Wide Bay-Burnett Board also operates its own base load power station at Howard. The Southern Electric Authority is also responsible for the distribution of electricity to a large rural area outside metropolitan Brisbane.

The central network is within the area of supply of the Capricornia Regional Electricity Board, which is responsible for the generation, main transmission and distribution of electricity.

The central and southern networks were interconnected by a 275 kV transmission line in early 1973.

The northern network covers the areas of supply of the Cairns, Townsville, and Mackay Regional Electricity Boards. Generation and main transmission are the responsibility of the Northern Electricity Authority, and electricity is purchased in bulk for distribution by the three Regional Electricity Boards. In addition, the Cairns Regional Electricity Board operates small internal combustion generating stations at certain isolated centres in its area, and the Townsville Regional Electricity Board supplies the western area of its region by means of a distribution system based on an internal combustion station at Hughenden.

West of the three main networks the form of organisation which has been adopted is determined by the stage of electrical development which has been reached. Immediately west of the Capricornia region the Central Western Regional Electricity Board operates with generation centralised at internal combustion stations at Longreach and Barcaldine. Other smaller regions of electricity supply are centred on Roma and Mount Isa. In addition, parts of southern Queensland are supplied by the Tenterfield Municipal Council and the North West County Council of New South Wales whilst the Balonne Shire Council purchases electricity in bulk from the Electricity Commission of New South Wales. In the remaining parts of Western Queensland there are a number of isolated electricity undertakings operated by Shire Councils.

The organisation of the industry in Queensland is moving progressively towards a greater integration of generating authorities so that the production of electricity can be centred to an increasing extent on larger and more efficient power stations.

### Electricity generation, transmission and distribution

Electricity generated in the State is based primarily on steam power stations using black coal, 90.3 per cent of the total production during 1971-72 being derived from this fuel. Hydro-electric

stations, located mainly in North Queensland, provided 8.7 per cent, and the balance of the production was provided from internal combustion and gas turbine stations. These gas turbine stations use oil as their energy source. All of the internal combustion diesel stations use oil as fuel but the power station at Roma also uses locally produced natural gas. Electricity generated in Queensland in power stations during 1971-72 totalled 6,944 million kWh. A further 22 million units were purchased in bulk from other producers of electricity for re-distribution to consumers.

At 30 June 1972 the total generating capacity of all Queensland power stations was 2,030,639 kW comprising 1,724,000 kW of steam plant, 135,208 kW of hydro-electric plant, 43,431 kW of internal combustion plant and 128,000 kW gas turbine plant.

The Southern electricity network is served by the following steam power stations: Bulimba 'A' (65,000 kW), Bulimba 'B' (180,000 kW), Tennyson 'A' (120,000 kW), Tennyson 'B' (120,000 kW), Swanbank 'A' (396,000 kW), Swanbank 'B' (360,000 kW) and Howard (37,500 kW) together with gas turbine stations—Swanbank 'C' (30 000 kW) and Middle Ridge (60,000 kW). The central network is served by power stations at Rockhampton (52,500 kW steam and 25,000 kW gas turbine) and at Callide (120,000 kW steam). The northern electricity network is supplied by steam power stations at Collinsville (120,000 kW) and Townsville (37,500 kW) and hydro-electric stations at Kareeya (72,000 kW) and Barron Gorge (60,000 kW).

The electrical transmission and distribution systems within the State comprised over 52,000 circuit miles of electric lines at 30 June 1972. The main transmission voltages are 275 kV, 132 kV, 110 kV, 66 kV and in certain areas 33 kV. The electricity supply industry's extensive rural electrification program continued using the single wire earth return system.

At 30 June 1972 the total number of electricity consumers was 603,450 of whom 229,244 were in the Brisbane metropolitan area.

#### **Future development**

Major development of the State's generating capacity is concentrated on the construction of the following power stations, at Gladstone (1,100,000 kW) and Swanbank 'B' (480,000 kW), and the construction of extensions to Collinsville (60,000 kW). Swanbank 'B' is planned to be fully operational with the commissioning of the fourth and final 120,000 kW set in 1973. The Gladstone power station will comprise four 275,000 kW generating sets, the first two of which are expected to be commissioned in 1975.

In North Queensland, the commissioning of a 60,000 kW set in 1974 will give the Collinsville station a total generating capacity of 180,000 kW.

A decision will be made during 1973 on the size and location of the next major power station to follow Gladstone.

### **South Australia**

A general historical survey concerning the electricity supply industry in South Australia is given in Year Book No. 39, page 1186. The survey traces the development of the industry from its formation in South Australia in 1895 until the establishment of the South Australian Electricity Commission in 1943.

#### **Electricity Trust of South Australia**

In 1946 the assets of the Adelaide Electric Supply Co. Ltd were transferred to a newly formed public authority, the Electricity Trust of South Australia, which became responsible for unification and co-ordination of the major portion of the State's electricity supply and which took over the powers previously vested in the South Australian Electricity Commission. In addition to the powers specified in the Adelaide Electric Supply Company's Acts, 1897-1931, the Trust may supply electricity direct to consumers within a district or municipality with the approval of the local authority, and by agreement with other organisations which generate or supply electricity, arrange to inter-connect the mains of the Trust with those of other organisations, and give or receive supplies of electricity in bulk.

#### **Capacity and production**

Of the total installed capacity in South Australia at 30 June 1972, the Electricity Trust operated plant with a capacity of 1,081,000 kW, and is the most important authority supplying electricity in the State. There were approximately 454,000 ultimate consumers of electricity in the State, of whom

446,000 were supplied directly and approximately 8,000 indirectly (i.e. through bulk supply) by the Trust. Its major steam stations are Osborne 'B' (240,000 kW), Port Augusta Playford 'A' (90,000 kW) and Playford 'B' (240,000 kW), and Torrens Island (480,000 kW).

The Trust operates two smaller power stations, the Mt Gambier Station has an installed capacity of 22,000 kW and Pt Lincoln 9,000 kW—both locations are connected with the Trust's interconnected system with 132 kV lines.

The two main fuels used by the Trust are sub-bituminous coal from Leigh Creek for the Port Augusta, Playford power stations and natural gas from the Gidgealpa-Moomba field for the Torrens Island station.

## Western Australia

For information on the early history of electricity supply in the metropolitan area, see Year Book No. 39, page 1189.

### State Electricity Commission of Western Australia

The State Electricity Commission of Western Australia is empowered to co-ordinate all power undertakings in the State and to encourage and promote the use of electricity and other power. The Commission provides central power supply through an interconnected grid system to the Metropolitan Area, the South-West and Great Southern areas, and an area extending eastward to Koolyanobbing. Beyond the limits of the interconnected system power is supplied to towns by diesel power stations operated by the Commission, local government authorities, private concessionaires, or mining companies. A scheme known as the Northern Areas State Power Scheme is also being developed. For this scheme the Commission purchases power in bulk to supply districts between Northampton and Dongara and to Perenjori and Morawa.

During the year the Commission took over the electricity supply in the following country towns: Geraldton, Coorow, Carnamah, Mingenew, Yerecoin, Wandering, Walpole. All towns taken over were connected to the S.E.C. mains and the local generating plants were shut down except in Geraldton where the change-over may be delayed until June 1973 due to a shortage of funds.

Some details of the Commission's activities for the year are: Number of consumers, 271,432; units generated, 2,666 million kWh; fuel used, 1,154,280 tons of coal, 176,071 tons of fuel oil, 241 million cubic feet of natural gas, and 3,924,290 gallons of diesel fuel.

## Tasmania

A considerable part of the water catchment in Tasmania is at high level, with a substantial natural storage available, and this has made it possible to produce energy at a lower cost than elsewhere in Australia, or in most other countries. Another factor contributing to the low cost is that rainfall is distributed fairly evenly throughout the year with comparatively small yearly variations. Abundant and comparatively cheap supplies of electricity played an important role in attracting industry to Tasmania. However, in recent years Tasmania's advantage in selling electric power has been reduced. A cost differential favouring Tasmania still exists but it is no longer so marked. For information on hydro-electric development in Tasmania prior to the establishment of the Hydro-Electric Commission in 1930, see Year Book No. 39, pages 1192-3.

### Hydro-Electric Commission

In 1929 the Government passed the *Hydro-Electric Commission Act 1929*, which established the Hydro-Electric Commission and vested in the Commission, with some minor exceptions, the right to use the waters of the State of Tasmania, and authorised it to develop and reticulate electric power for all purposes. In 1930 this corporate body took over the State hydro-electric undertaking and the business of the Hydro-Electric Department.

**Output and capacity of hydro-electric system**

The following table outlines the development of the Tasmanian generating system.

**TASMANIAN POWER GENERATING SYSTEM**

<i>Station</i>	<i>Year of completion</i>	<i>Head (in feet)</i>	<i>Generator capacity (kW)(a)</i>	<i>Average annual output (million kWh units)</i>
<b>COMPLETED STATIONS</b>				
Waddamana 'B'	1949	1,127	48,000	(b)
Tarraleah . . . . .	1951	981	90,000	593
Butlers Gorge . . . . .	1951	184	12,200	63
Trevallyn . . . . .	1955	415	80,000	541
Tungatinah . . . . .	1956	1,005	125,000	560
Lake Echo . . . . .	1956	568	32,400	76
Wayatinah . . . . .	1957	203	38,250	274
Liapootah . . . . .	1960	361	83,700	455
Catagunya . . . . .	1962	142	48,000	260
Poatina . . . . .	1965	2,720	250,000	1,322
Tods Corner . . . . .	1966	136	1,600	13
Meadowbank . . . . .	1967	95	40,000	209
Cluny . . . . .	1967	51	17,000	105
Repulse . . . . .	1968	88	28,000	160
Rowallan . . . . .	1968	161	10,450	40
Lemonthyme . . . . .	1969	523	51,000	286
Devils Gate . . . . .	1969	226	60,000	300
Wilmot . . . . .	1971	825	30,600	126
Bell Bay . . . . .	1971	(c)	120,000	788
Cethana . . . . .	1971	324	85,000	409
Paloona . . . . .	1972	103	28,000	131
Fisher . . . . .	1973	2,130	43,200	247
<i>Total</i> . . . . .	..	..	1,322,400	6,957
<b>STATIONS UNDER CONSTRUCTION</b>				
Bell Bay, Stage 2 . . . . .	1974	(c)	120,000	739
Gordon, Stage 1 . . . . .	1976	610	240,000	1,445
<i>Total</i> . . . . .	..	..	360,000	2,184
<b>ALL STATIONS</b>				
<b>Grand Total</b> . . . . .	..	..	<b>1,682,400</b>	<b>9,141</b>

(a) Emergency gas turbine generating capacity of 21,000 kW at Bell Bay and 10,000 kW at Macquarie Point (Hobart) not included. (b) Reserve plant only. (c) Thermal station.

The number of ultimate consumers at 31 March 1973 was 155,743.

**New capacity**

The Hydro-Electric Commission's current construction program is the Gordon River Power Development, Stage 1.

The first stage of the Gordon River Power Development involves the construction of a dam and a power station with a proposed instalment of 240,000 kW capacity with provision for an increase to 320,000 kW. An oil fired thermal station with a single 120,000 kW generator was completed at Bell Bay on the River Tamar in 1970. The second stage of the station which will double the capacity is expected to be completed by 1974. A further planned development is the Pieman River Scheme on the west coast of the State. It is expected that the first station in the scheme will be commissioned in 1980.

The Commission is conducting extensive surveys and investigation of other schemes with a view to further construction after the completion of the present program. It is estimated that the potential which can be developed economically should ultimately harness 3,000,000 kW to the system.

## Commonwealth Territories

### Australian Capital Territory

The supply authority is the A.C.T. Electricity Authority, which took over the functions of the Canberra Electric Supply Branch, Department of the Interior, on 1 July 1963. Supply was first made available in Canberra during 1915 and was met from local steam plant. Connection to the New South Wales interconnected system was effected in 1929, and all requirements are now taken from this system. Locally owned plant consists of 4,000 kW of diesel alternators which are retained as a standby for essential supplies. The total number of ultimate consumers at 30 June 1972 was 49,210. During the year 1971-72 the bulk electricity purchased was 634,479,000 kWh and the system maximum demand was 167,400 kW.

### Northern Territory

Electricity is supplied in the main population centres of the Northern Territory by the Department of the Northern Territory under the provisions of the *Supply of Services Ordinance* 1952-1973 and the Electricity Supply Regulations made pursuant thereto.

A steam turbo-generating station is operated together with an extensive distribution system in Darwin, and diesel generating stations and distribution systems at Alice Springs, Katherine, Pine Creek, Elliot and Daly Waters. At Tennant Creek supplies of electricity are purchased in bulk from Peko Mines N.L. and sold to consumers through a distribution system owned by the Department of the Northern Territory.

Capacities of generating stations as at 30 June 1972 were: Darwin 70,500 kW, Alice Springs 11,734 kW, Katherine 5,403 kW, Pine Creek 900 kW, Elliot 200 kW, Daly Waters 150 kW.

The total number of consumers served in the Territory as at 30 June 1972 was 14,093, an increase of 13.8 per cent over that of the previous year.

### Papua New Guinea

For details of electric power generation and distribution *see* Chapter 28, The Territories of Australia.

## Statistical Summary

For a summary of operations of electricity establishments in 1968-69 and 1969-70, *see* Chapter 21, Manufacturing Industry, pages 736-7.

## CHAPTER 28

### THE TERRITORIES OF AUSTRALIA

The internal Territories of Australia are the Northern Territory and the Australian Capital Territory. External Territories under the control of Australia are: Norfolk Island; the Territory of Papua (formerly British New Guinea); the Territory of New Guinea (under Trusteeship Agreement with the United Nations); the Territory of Heard and McDonald Islands; the Australian Antarctic Territory; the Territory of Cocos (Keeling) Islands; and the Territory of Christmas Island. There is also the Territory of Ashmore and Cartier Islands, deemed to form part of the Northern Territory.

Information on all except Ashmore and Cartier Islands is contained in the following pages, and details of the acquisition of all the Territories will be found on pages 5, 22, and 23 of Chapter 1. More detailed statistics and additional descriptive matter are to be found in the Annual Reports of the Administrations of the various Territories and in the *Northern Territory Statistical Summary* (1.6) and the *Australian Capital Territory Statistical Summary* (1.7) issued by this Bureau. Statistics for the Northern Territory and the Australian Capital Territory are also included in chapters dealing with particular subjects. The Statistician, Papua New Guinea, issues a number of publications containing statistics relative to these two Territories, separate and combined.

Responsibility for the general administration of the Territories of Norfolk Island, Papua New Guinea, Cocos (Keeling) Islands and Christmas Island is vested with the Commonwealth Department of External Territories; for the Northern Territory (including Ashmore and Cartier Islands) with the Department of the Northern Territory; the Australian Capital Territory with the Department of the Capital Territory; and for Antarctica and Heard and McDonald Islands with the Department of Supply. Matters excepted are defence and civil aviation, and, in the Northern Territory and the Australian Capital Territory, public health, justice, education (excluding Aborigines), postal and communications and the construction and operation of the basic physical services, which are the responsibility of the Department of Health, the Attorney-General's Department, the Department of Education, the Postmaster-General's Department and the Department of Works, respectively.

### THE NORTHERN TERRITORY

#### General description

##### Area

Upon the extension of New South Wales westwards to the 129th east meridian in 1825, the Northern Territory was incorporated in that colony, but in 1863 it was annexed by Royal Letters Patent to the province of South Australia. With the adjacent islands, it was transferred to the Commonwealth on 1 January 1911. The total area is 520,280 square miles.

##### Legislation and administration

On 1 January 1911 the Territory was transferred from South Australia to the Commonwealth. The terms were outlined in Year Book No. 15, page 940.

The *Northern Territory (Administration) Act 1910-1973* provides for an Administrator, appointed by the Governor-General, to administer the Territory on behalf of the Commonwealth.

It provides for a Legislative Council for the Northern Territory to make ordinances for the peace, order and good government of the Territory. This Council consists of six official members and eleven elected members. A President of the Council is elected from among the elected members. Money votes may be proposed in the Council only upon recommendation by message of the Administrator.

Ordinances are presented to the Administrator for assent. He is obliged to reserve ordinances relating to certain matters, including Crown lands and Aborigines, for the Governor-General's pleasure. Others he may assent to, withhold assent from, or return to the Legislative Council with recommended amendments. The Governor-General may within six months, disallow any ordinance assented to by the Administrator and, in respect of an ordinance reserved for his pleasure, he may assent, withhold assent, withhold assent to part of the ordinance and assent to the remainder, or recommend to the Administrator any amendments to the laws of the Territory that he considers desirable arising out of his consideration of the ordinance.

The Act also provides for an Administrator's Council to advise the Administrator on any matter referred to it, either by the Administrator, or in accordance with the provisions of any ordinance of the Northern Territory. The Council consists of the Administrator, and two official and three elected members of the Legislative Council.

The Territory elects one member to the House of Representatives.

The Corporation of the City of Darwin was established in 1957. The Corporation comprises a Mayor and ten aldermen (two for each ward) elected by adult franchise. Alice Springs was constituted a municipality on 25 June 1971 and the first election held on 26 June 1971. The Alice Springs Corporation consists of a Mayor and eight aldermen elected by adult franchise. Elsewhere in the Territory, municipal services are provided by the Administration. Town Management Boards are established in Katherine and Tennant Creek. Each of these boards consists of five members elected by adult franchise and four members appointed by the Administrator. The function of the Boards is to advise the Administrator on local matters.

### Physical geography

The Territory is within the torrid zone, with the exception of a strip about 180 miles wide which lies south of the Tropic of Capricorn.

The low flat coastline seldom reaches a height of 100 feet. Sandy beaches and mud flats, thickly fringed with mangroves, prevail. Sandstone, marl and laterite form the occasional cliffy headlands. The coastline of more than 1,000 miles is indented by bays and inlets and intersected by numerous rivers, many of which are navigable for considerable distances from their estuaries. The only practicable deep-water port for general use, however, is Darwin.

Inland the country generally is devoid of conspicuous landmarks. From the coast there is a general rise southwards to the vicinity of the seventeenth or eighteenth parallel of south latitude, where the higher lands form the watershed between the rivers that flow northwards to the sea and those that form the scanty supply for the interior system. Towards the centre of the continent the land over a wide area is of considerable elevation, and there are several mountain ranges, generally with an east and west trend.

### Climate, fauna and flora

There are two main climatic divisions, the wet season, November to April, and the dry season, May to October, with uniform and regular changes of weather. Nearly all the rainfall occurs in the summer months.

The ordinary types of native Australian fauna inhabit the Territory. As elsewhere on the continent, the higher *Theria* are rare, but marsupials, birds, crocodiles, fresh-water tortoises, snakes (mostly non-venomous), and frogs abound. There are many varieties of fresh-water fish and littoral *Mollusca*. Butterflies and beetles are strongly represented. The termite is a pest which is capable of serious damage to wooden buildings unless special preventive measures are taken. Mosquitoes and sandflies are very troublesome in the "top end" particularly in the wet season. Most types of native fauna are protected and buffaloes exist in large herds on the northern coastal plains.

The vegetation is north Australian in type but a number of forms belong to the Malayan and Oceanic regions. The climate and generally poor soils associated with it give rise to tropical savannah vegetation, with the size and volume of woody material present being closely related to rainfall and the quality of the forests decreasing strikingly as one proceeds inland from the northern coastline. In the north, cypress pine which is termite resistant, ironwood, bloodwood and paperbark timbers are cut and milled for local building purposes. Further inland, particularly on the Barkly Tableland and parts of the Victoria River district, there are better grazing grasses and some shrubs, while the wide belt of sandy plain between the Barkly Tableland and the ranges in the Alice Springs area, carries mainly spinifex grass and low scrub. The plains of the Alice Springs district carry chiefly an acacia scrub known as mulga, spinifex and other sparse grasses. The principal families represented in the interior are *Gramineae*, *Chenopodiaceae*, *Compositae* and *Mimosaceae*.

## Population

*See also* the chapters Population and Vital Statistics.

The population of the Northern Territory at the census of 30 June 1971, was 48,627 males, 37,763 females, 86,390 persons. These figures include an Aboriginal population of 11,686 males, 11,567 females, 23,253 persons. A total of 4,004 Aborigines were enumerated in urban areas of the Territory, the remainder were enumerated in areas classified as rural. While some Aborigines choose to live on reserves, a large area of reserved land (94,196 square miles) has been maintained to provide economic resources from which the Aborigines may benefit either directly or from royalty payments.

## Aboriginal Affairs

### Policy

Policy statements in Aboriginal affairs in recent years at a Commonwealth level and generally at State level have indicated a clear change from what can be called an 'assimilation' approach to an 'integration' approach, with increasing consciousness of the right of Aborigines to determine their own future. The former Prime Minister, Mr McMahon, in his statement of 26 January, 1972 said 'The Government recognises the rights of individual Aborigines to effective choice about the degree to which and the pace at which they come to identify themselves with that (Australian) society.' and 'The role of governments should increasingly be to enable them (Aborigines) to achieve their goals by their own efforts.'

The underlying principle of the Government's present approach in Aboriginal affairs may be briefly described as 'self-determination'. Emphasis today is on Aboriginal participation in the making of policies, and in decisions about the programs that affect them, and about their future.

### Legal status

As Australian citizens Aborigines are entitled to equality before the law. The Commonwealth Department of Aboriginal Affairs and other Commonwealth departments and agencies, for the purpose of administering various programs designed to benefit Aborigines, define an 'Aboriginal' or 'Torres Strait Islander' as a person of Aboriginal or Islander descent who identifies as an Aboriginal or Islander and is accepted as such by the community with which he is associated.

### Special schools for Aborigines

The special schools for Aborigines were combined with the community schools in February 1973.

### Land

An area of over 94,000 square miles has been reserved in the Northern Territory for Aborigines. The Government has undertaken to vest these reserve lands in the Aboriginal people, and has indicated that Aboriginal land ownership will carry with it full rights to the minerals and timber on the reserves. An Aboriginal Land Rights Commission was appointed in January 1973 to recommend ways and means of implementing this policy. Pending the Commission's report, the granting of leases of land and mining and prospecting rights on reserves has been suspended.

At present, royalties from the mineral and timber activities carried on within reserves are paid into the Aboriginal Benefits Trust Fund, established in 1952. Loans or grants are made from the fund to any Aboriginal or group of Aborigines in the Northern Territory on the advice of a special advisory committee which includes a majority of Aboriginal representatives. Moneys in the fund may be used for a wide variety of purposes which would benefit the Aboriginal people. Ten per cent of the royalties paid by the mining companies at Gove and at Groote Eylandt are paid into special funds for the use of Aborigines at Yirrkala and at Groote Eylandt respectively.

It is the policy of the Australian Government to assist Aboriginal communities outside reserves to purchase land. An Aboriginal Land Fund will be established and the Government has undertaken to provide up to \$5 million per year to the Fund for the next ten years. Two pastoral properties have been bought by Aboriginal communities in the Northern Territory, and others are under investigation. On some other pastoral properties where there are Aboriginal communities, relatively small residential areas are being resumed to allow the communities to manage their affairs with a greater degree of independence.

### **Community services and affairs**

Government policy in the administration of Aboriginal affairs is to work as far as possible through existing State and Commonwealth departments and instrumentalities, and the Department of Aboriginal Affairs has primarily a policy planning and co-ordinating role. Responsibility for a variety of community services on Aboriginal reserves and in Aboriginal communities in the Northern Territory is being transferred from the Northern Territory Division of the Department to other appropriate authorities. The Departments of Education and Health recently assumed full responsibility for education and health respectively in Aboriginal communities in the Northern Territory, and the responsibility for a number of other functions such as town services on reserves and social welfare services is under review.

### **Special programs for Aborigines**

To meet the needs of Aboriginal people throughout Australia the Australian Government has developed, on a national basis, a variety of programs in fields such as health, education, housing, employment and vocational training, special works, regional projects and economic enterprises. These are available to Aborigines in the Northern Territory, but the Australian Government, having direct responsibility for the administration of Aboriginal affairs in the Northern Territory, is able to take special initiatives there.

Attention is being given to changing the institutional character of Aboriginal reserve communities. Supervisory, managerial and technical staff will be replaced by community development advisers, consultants, and workers employed by the communities themselves. Programs are designed to encourage and strengthen the capacity of Aborigines to manage their own affairs, to increase their economic independence, and to reduce existing social and other handicaps facing them. The Government is also able to support and encourage Aboriginal initiative by responding directly to individual communities which wish to develop their own social or economic projects: grants may be made to communities to enable them to improve community facilities and amenities, and to help them to establish economic enterprises.

The Government policy is to provide Aboriginal primary school children in Aboriginal communities with education in their own languages as far as is practicable. Bilingual education programs were initiated in five schools in Northern Territory Aboriginal communities in 1973 as a first step in implementing the new policy.

## **Production**

*See also* the chapters dealing with particular subjects.

### **Land tenure**

Nearly 60 per cent of the total area of land in the Northern Territory is held under various forms of lease or licence which are described in Year Book No. 48, pages 111-12. The remainder comprises unoccupied and unreserved areas (21.1 per cent), reserved (18.7 per cent) and freehold (0.1 per cent). The following changes should be noted.

The Commonwealth Government is conducting a comprehensive review of pre-existing Commonwealth policies affecting land tenures and the interests of Aborigines in land holding on Aboriginal Reserves, and has appointed Mr Justice Woodward to conduct an enquiry into Aboriginal Land Rights. Mr Justice Else-Mitchell has been appointed to conduct an enquiry into Urban Land Tenure.

The chapter Rural Industry of this issue contains statistical information concerning areas occupied under various forms of tenure.

### **Pastoral and agricultural industries**

Beef cattle production is the major rural industry in the Northern Territory. The beef industry has been characterised throughout its history by a slow rate of expansion, due largely to the poor quality of native pastures and unsatisfactory market outlets. Recent developments in pasture improvement, the opening in 1963 of export abattoirs at Katherine and Darwin and better disease control have encouraged producers to improve the quality of their cattle. This, coupled with better management techniques, improved pasture establishment and various incentives and research programs introduced by the Government to encourage the development of the pastoral industry, has resulted in a continuing increase in turnoff figures and value of production.

In the past few years considerable capital has been attracted into land development. Two factors have been principally responsible. The first has been the demonstration by the Department of the Northern Territory and C.S.I.R.O. that Townsville stylo (T.S.) can be grown successfully as a pasture legume in the higher rainfall areas of the Territory. The economic feasibility of this practice has been firmly established by station experience and sustained by favourable beef prices. Improved pasture areas have grown considerably and there has been a greater use of phosphatic fertilisers in the last few years. The second development, the commercial production of grain sorghum, has so far occurred on only a few properties. It requires arable land and considerable capital input. Grain sorghum is still at an early stage of testing; nevertheless it promises to provide a more capital intensive primary industry.

Animal production has been augmented in recent years by the buffalo meat industry. Interest in domestication has been developed on the sub-coastal plains properties which will be necessary for further advancement of this industry. Through the development of more intensive cattle production utilising improved pastures, tropical legume seed production received considerable impetus. A seed certification scheme has been introduced by the Department of the Northern Territory to support this industry.

Increasing private investment in rural development is leading to greater pressures upon the Government for extension services and research. The work of C.S.I.R.O. and the Department of the Northern Territory research stations and experimental farms is providing the basis for continuing rural development. As new knowledge is being gathered it will be followed by testing on farm scale. The research institutions in existence in the Northern Territory are as follows.

*Arid Zone Research Institute*—Alice Springs. With the completion of the new research laboratory in 1967 more emphasis is being placed on arid zone research in the 'Centre' and the need to conserve valuable pastoral lands while achieving maximum productivity.

*Beatrice Hill Animal Husbandry Research Station.* It has two main roles, one as a regional station examining suitable pasture and animal production systems in the Coastal Plains/Darwin area and the second involving basic studies into breeding and breeds with wider implications. Its efforts have been largely devoted to the animal breeding investigations with some attention being paid to the development of improved pasture systems, including establishment, maintenance and the reaction to various grazing rates. Breeding trials are being conducted with Santa Gertrudis, Brahman and Africana, cross-breeds and Shorthorns. Banteng cattle are being studied as a source of tropical blood for breeding cattle adaptable to Territory conditions and a small herd of cross-bred cattle has now been developed. Buffalo/Brahman comparison studies are also being undertaken.

*Victoria River Experiment Station.* This is the only Government Experiment Station in the rangelands of the Northern Territory. Work is being undertaken on genetic improvement of the local breed of Shorthorn cattle, evaluation of improved pastures, supplements, breed comparisons and range management studies.

*Upper-Adelaide River Experiment Station.* The station is mainly concerned with regional investigations of pasture and animal production for the Marrakai area including stocking rates on improved and native pastures, comparison studies of improved pastures and testing of new potential pastures, management of pastures on flood plains and feeding supplementation trials.

*Berrimah Experiment Farm.* The work of this farm has been mainly restricted to pasture and fodder crop investigations, plant introduction, sorghum breeding, fruit, vegetable and weed control trials and intensive animal studies.

*Katherine Experiment Farm.* This farm services the southern part of the Daly River Basin and has a larger component of cropping work than other stations. Work being conducted includes utilisation of Townsville stylo, pasture improvement and management, sorghum, peanut, guar, cowpea and bulrush millet trials and various aspects of cattle management.

*Coastal Plains Research Station.* The work on this station includes rice and pasture improvement, particularly in relation to suitable legumes for the sub-coastal plain.

*Douglas-Daly Experiment Station.* This station is concerned with developing animal production systems for the higher rainfall part of the Daly River Basin including evaluation of pastures under grazing, stocking rates, supplementary feeding, use of fertilizers, pasture establishment, and pasture/animal production trials.

*Other research sites.* Research and trials are also being conducted at selected sites on maize, soybeans, sorghum, peanuts, *Stylosanthes* spp. and weed control.

**NORTHERN TERRITORY: AREA AND PRODUCTION OF CROPS**  
1967-68 TO 1971-72

(a) At 31 March. (b) Not collected.

**Mining**

The mining industry is the major contributor to the income of the Northern Territory. Mineral output was valued at \$50.5 million in 1971-72 and at \$28 million in the first half of 1972-73. The main minerals being produced are bauxite, manganese, iron ore, copper, gold, and bismuth and the main centres of production are Gove, Groote Eylandt, Frances Creek and Tennant Creek. Exploration for new ore bodies continues at a high level.

A bauxite mining and treatment project based on extensive bauxite deposits has been developed at Gove at a cost of about \$310 million. Under an agreement with the Commonwealth, ratified by a special Ordinance in 1968, Nabalco Pty Ltd undertook to develop the deposits. A supplementary agreement signed in 1969 set the minimum Australian equity in the project at 30 per cent. A joint venture now operates the project in which the respective rights are held, 70 per cent by Swiss Aluminium Australia Pty Ltd and 30 per cent by Gove Alumina Limited (a consortium of seven Australian companies). The first stage of an alumina plant to process the bauxite was opened on 1 July 1972. The capacity of the plant will be expanded from 500,000 tons to 1 million tons per annum by July 1973. The agreement also provides that Gove Alumina Limited can export a total of 40 million tons of untreated bauxite over 20 years and exports commenced in June 1971.

Manganese ore is being produced from extensive deposits at Groote Eylandt in the Gulf of Carpentaria. Production capacity has been increased since the commencement of operations in 1966 and should reach about 1.6 million tons per annum of lump ore and by-products by late 1972 or early 1973. Groote Eylandt supplies all Australia's requirements of metallurgical grade manganese ore and large tonnages are exported to Japan, Europe and the U.S.A. Total shipments of ore in 1971-72 amounted to 813,570 tons valued at about \$15.8 million.

Frances Creek is the only iron ore mine in the Territory following the closure of the Mt Bunday mine in December 1971. All iron ore produced is exported through Darwin to Japan. Total iron ore production in 1971-72 was 585,568 tons valued at about \$5.5 million.

Most of the copper, gold and bismuth produced in the Territory is obtained from the underground mines of Peko Wallsend Ltd, at Tennant Creek. Production from these mines in 1971-72 was 6,652 tons of copper, 233,363 fine ounces of gold, 130,421 ounces of silver and 334.5 tons of bismuth, valued at about \$18.4 million. Three mines are currently in production and a major expansion program costing \$39 million is underway. A new mine, Warrego, commenced operation in July 1972 and the Gecko mine is expected to open early in 1974. A flash smelter is due to be commissioned in 1973.

Large deposits of uranium ore have been discovered in the Alligator Rivers region, about 150 miles east of Darwin. The most important discoveries so far are Ranger 1, Nabarlek and Koongarra and the companies are negotiating individually with the Commonwealth for the development of the deposits, with special emphasis on protection of the environment. The Commonwealth is examining the feasibility of a regional centre to serve the mining industry as well as the forestry, pastoral and tourist industries in the region. The Alligator Rivers region is considered to be a uranium province of world importance and there are good prospects for the discovery of further deposits of commercial significance.

Investigations are continuing into possible methods of treating the extensive lead/zinc deposits located in the McArthur River district. Conventional metallurgical processes are not considered suitable for the treatment of these ores. Other mineral deposits of possible economic significance exist in the Rum Jungle, Jinka Plains and Jervois Range areas of the Northern Territory.

The following table shows preliminary results of the Mining Censuses taken in respect of the years ended 30 June 1969, 1970 and 1971.

#### NORTHERN TERRITORY: MINING ESTABLISHMENTS 1968-69 TO 1970-71

NOTE. Direct comparisons with figures for previous years are not possible because of changes in the census units, the scope of the census and the items of data. For details see Chapter 26, Mineral Industry.

		1968-69	1969-70	1970-71
Establishments operating during year	No.	21	27	30
Persons employed(a)	No.	1,281	1,446	1,495
Wages and salaries	\$m	6.6	8.0	8.7
Turnover	\$m	36.3	38.5	41.3
Opening stocks at 30 June	\$m	4.4	4.7	5.3
Closing stocks at 30 June	\$m	5.1	5.2	6.1
Purchases, transfers in and selected expenses	\$m	14.8	13.2	20.0
Value added(b)	\$m	22.2	25.9	22.2
Fixed capital expenditure(c)	\$m	12.9	20.6	26.0

(a) At end of June. Includes working proprietors, less purchases, transfers in and selected expenses.

(b) Turnover plus increase (or less decrease) in the value of stocks, (c) Outlay on fixed tangible assets less disposals.

*Petroleum and natural gas.* Offshore operations again represented the main activity in petroleum exploration during 1971-72. At 30 June 1972, 7 oil permits, covering 57,500 square miles; 2 oil licences, covering 229 square miles; as well as 20 exploration permits, covering 3,535 blocks (approximately 114,364 square miles); were being held.

Drilling of the Petrel structure in the Bonaparte Gulf resulted in a promising discovery of natural gas. Other off-shore exploration to date has not, however, revealed the presence of gas in commercial quantity.

On-shore evaluations of the Mereenie oil and gas field have indicated reserves of 300 million barrels of oil and up to 1 U.S. trillion cubic feet of gas. The recovery of the oil presents some difficulties but the feasibility of establishing a small refinery at Alice Springs is being examined by the exploration companies and the Government.

A substantial natural gas reservoir at Palm Valley about 70 miles west of Alice Springs has been known to exist since the mid-sixties. Exploration work is continuing to determine the full extent of the gas reserves in this area. The Government is now considering to what use the gas will be put.

### Forestry

A program of forest improvement and development to conserve existing forest areas and increase timber resources undertaken by the Forestry Section of the Department of the Northern Territory aims to eventually reduce the Territory's dependence on imported timber. Basic forestry research is carried out by the Forestry and Timber Bureau at a Regional Research Station established at Berrimah. The Territory forestry program includes the regeneration and utilisation of native forests, the establishment of softwood plantations (1,300 acres in 1971-72) and makes provision for the employment and training of Aborigines in all aspects of forestry work. Local production of log timber, mainly cypress pine, amounted to 1,265,000 super feet in 1971-72 but this was insufficient to meet local needs and some 5,008,000 super feet of sawn timber was imported from interstate and overseas through the port of Darwin. Consumption is higher than this, but is unrecorded as there is no statistical control of road freight imports.

### Fisheries

Following preliminary surveys indicating the existence of valuable prawn resources off the Northern Territory coast, prawning operations by a number of companies were approved for waters adjacent to the Northern Territory. All companies were required to establish shore processing plants following an initial survey period. Three of these companies are now operating. Two are joint Australian-Japanese ventures which have been permitted to use foreign vessels and crews for limited periods and which have been required to establish processing plants in Darwin. The third company is operating a shore processing plant at Groote Eylandt. For a limited establishment period this company has been given protection against the establishment of other processing plants in that area although this protective arrangement would not preclude Aborigines from undertaking their own prawn fishing and processing on Aboriginal reserves should they wish to do so. During 1972, Territory-based prawn ventures exported prawns valued at \$5.4 million, the bulk of which went to Japan.

The other main fishery in the Territory is an inland fishery based on barramundi which produced more than 203 metric tons live weight of fish during 1971-72. A small cultured pearl industry has also been established.

#### NORTHERN TERRITORY: FISHING(a) 1967-68 TO 1971-72

		1967-68	1968-69	1969-70	1970-71	1971-72
<b>Prawning—</b>						
Estimated gross weight of prawn catch . . . . .	tonnes	10	1,077	3,938	4,108	2,629
Gross value of prawns . . . . .	\$'000	14	831	3,646	3,083	2,562
<b>Other fisheries(b)—</b>

Gross value of fish . . . . .	\$'000	92	96	51	139	191
<b>All fisheries—</b>						
Number of boats engaged . . . . .		53	110	82	127	130
Number of men employed . . . . .		123	573	437	542	532

(a) Excluding pearl shell fisheries and pearling.

(b) Excluding crabs and oysters.

### Secondary industries

The secondary industries that have so far been established in the Territory have been largely the service industries normally associated with a developing area, such as electrical repairs, printing, motor and marine engineering, plumbing, welding, joinery, sheet metal work, and blue metal crushing. Industrial investments by private interests in recent years include plants to manufacture bitumen, clay bricks, concrete bricks, reinforcing steel, concrete products and fencing materials.

The following table shows preliminary results of the Manufacturing Censuses taken in respect of the years 1968-69 and 1969-70.

**NORTHERN TERRITORY: MANUFACTURING ESTABLISHMENTS,  
1968-69 AND 1969-70**

NOTE. Direct comparisons with figures for previous years are not possible because of changes in the census units, the scope of the census and the items of data. For details see Chapter 21, Manufacturing Industry.

	1968-69	1969-70
Establishments operating during year . . . . . No.	69	65
Persons employed(a) . . . . . No.	922	944
Wages and salaries . . . . . \$m	3.6	4.2
Turnover . . . . . \$m	20.4	20.2
Opening stocks at 30 June . . . . . \$m	1.8	2.1
Closing stocks 30 June . . . . . \$m	2.2	3.1
Purchases, transfers in and selected expenses . . . \$m	11.4	12.5
Value added(b) . . . . . \$m	9.5	8.6

(a) Average over whole year. Includes working proprietors. (b) Sales, transfers out and other operating revenue plus increase (or less decrease) in the value of stocks, less purchases, transfers in and selected expenses.

### Tourism

Tourism has become one of the Territory's major industries in recent years. There were about 112,000 visitors to the Northern Territory in 1971-72. The estimated value of the industry in 1971-72 was \$24 million and in 1972-73 it is expected to reach \$26 million.

A firm of consultants has reported on the tourism potential of Central Australia, and in particular the Ayers Rock-Mount Olga National Park. Their findings have been published in the reports *Tourism Plan for Central Australia* and *Ayers Rock-Mount Olga National Park Development Plan*. The reports are being evaluated and further investigations are being undertaken to assist the Government's consideration of tourism development proposals for the Centre.

### National Parks and Reserves

Large areas in the Territory have been set aside as wildlife sanctuaries under the provisions of the Wildlife Conservation and Control Ordinance. They cover about 19,250 square miles and are controlled by the Chief Inspector of Wildlife in the Department of the Northern Territory. A further 92,704 square miles of Aboriginal reserves are also wildlife protected areas.

There are some thirty-nine national parks and reserves totalling about 946 square miles which are administered by the Northern Territory Reserves Board. The Board is responsible for the care, control and management of these reserves, and its functions include preservation and protection of natural and historical features, and the encouragement of public use and enjoyment of land set aside in such reserves.

## Trade, transport and communication

### Trade

No comprehensive record is kept of the trade between the States and the Territory. The following table shows the values of the principal commodities imported into and exported from the Northern Territory from or to overseas countries during the years 1967-68 to 1971-72.

**NORTHERN TERRITORY: PRINCIPAL OVERSEAS  
IMPORTS AND EXPORTS, 1967-68 TO 1971-72**  
(**\$'000**)

<i>Commodity</i>	<i>1967-68</i>	<i>1968-69</i>	<i>1969-70</i>	<i>1970-71</i>	<i>1971-72</i>
<b>IMPORTS</b>					
Petroleum and shale spirit—					
Aviation kerosene . . . . .	1,099	1,513	1,093	1,119	212
Automotive spirit . . . . .	587	577	706	1,051	1,108
Automotive distillate . . . . .	324	589	1,103	930	1,437
Furnace fuel . . . . .	473	659	567	837	1,847
Other(a) . . . . .	527	743	1,077	1,226	1,912
Timber . . . . .	257	383	548	404	546

Machinery and transport equipment(b) . . . . .	2,376	12,757	23,534	11,464	9,049
Other articles . . . . .	2,569	3,686	10,029	5,806	8,916
<b>Total imports . . . . .</b>	<b>9,407</b>	<b>21,800</b>	<b>39,829</b>	<b>23,670</b>	<b>25,866</b>
<b>EXPORTS(c)</b>					
Meats . . . . .	4,999	4,999	4,896	5,331	5,744
Fresh prawns and shrimps . . . . .	..	605	4,917	5,627	4,853
Hides and skins, raw . . . . .	134	209	280	183	118
Iron ore . . . . .	3,053	6,467	9,124	7,094	6,847
Other ores and concentrates . . . . .	6,208	8,539	9,207	10,939	16,054
Other articles . . . . .	3,461	8,115	21,301	7,285	15,627
<b>Total exports . . . . .</b>	<b>17,855</b>	<b>28,934</b>	<b>49,725</b>	<b>36,459</b>	<b>49,243</b>

(a) Includes industrial and marine diesel fuel, oil for use as refinery stock, etc. (b) Includes value of oil search equipment (floating structures, etc.) which were brought to the Northern Territory for temporary operation and moved overseas after the planned exploration activities were completed. (c) Includes domestic exports and re-exports.

### Shipping

Shipping services to Darwin are provided from the eastern States by the Australian National Line and from the west by the Western Australian State Shipping Service. Increasing numbers of oil tankers and overseas general cargo vessels visit Darwin while iron ore carriers continue to load lump and fine ore for Japan. The prawning and fishing industry accounts for a significant portion of the shipping entries into the port. A high level of activity continues as a result of visits by oil rig service vessels.

John Burke Pty Ltd operates a subsidised shipping service from Brisbane to the Gulf of Carpentaria ports and serves Aboriginal missions and settlements as well as the mining centres of Gove and Groote Eylandt. Gove is also served by Australian Territory Liner Services. Other shipping services to Groote Eylandt and Gove are in connection with the export of the mining production.

Mission and privately owned boats and barges also provide services from Darwin to Aboriginal communities and ports along the coast.

In 1970 the Australian National Line replaced vessels calling at Darwin with a new container/bulk ore vessel, the *Darwin Trader*, which carries general cargo to Darwin and backloads manganese ore from Groote Eylandt to Tasmania.

In 1971 the Western Australian State Shipping Service introduced two unit-load vessels and in the first half of 1973 a further two unit-load vessels; these vessels replace all the conventional cargo and passenger/cargo vessels previously in use. In early 1972, the Commonwealth Government offered the Western Australian Government a capital grant of \$2.5 million to assist in the purchase of the fourth unit-load vessel. The significant improvement in port operations as a result of the introduction of these vessels has been one of several factors which has led to a review of the previously approved proposals for the development of the port of Darwin.

### Air services

At 30 June 1973 there were 127 aerodromes in the Territory, nine of which are maintained by the Commonwealth Department of Civil Aviation. The overseas passenger services using the Darwin international airport are Qantas/British Airways (Sydney to London and to Hong Kong); T.A.A. on behalf of Transportes Aereos de Timor (Darwin to Baucau) and Merpati Nusantara (Darwin to Kupang). Regular internal services to Darwin, with, in some cases, intermediate stops at Territory centres, are operated by Trans-Australia Airlines and Ansett Airlines (from Adelaide, Melbourne, Sydney and Brisbane), and MacRobertson-Miller Airways Ltd (from Perth and Derby), MacRobertson-Miller Airways Ltd and Connair Pty Ltd operate a network of air services throughout the Territory, the latter company's base being at Alice Springs. The Northern Territory Medical Service has aircraft based at Darwin, Gove and Alice Springs, whilst the Royal Flying Doctor Service operates from Alice Springs. Charter services are available at a number of centres including Darwin, Alice Springs, Katherine, Tennant Creek, Gove and Groote Eylandt.

### Railways

The Commonwealth Railways Commissioner operates the Central Australia Railway from Port Augusta in South Australia to Alice Springs over a distance of 757 miles, of which about 200 are in the Northern Territory. The line is standard gauge from Port Augusta to Marree, a distance of 217 miles, and 3 ft 6 in gauge from Marree to Alice Springs. The Commonwealth Government has approved in principle the construction of standard gauge line between Tarcoola and Alice Springs to replace the Marree-Alice Springs section of the Central Australia Railway and survey work has commenced. The Commissioner also operates the North Australia Railway between Darwin and Birdum on a 3 ft 6 in gauge over a distance of 317 miles. The two inland terminals, Alice Springs and Birdum are about 630 miles apart and are connected by road transport along the Stuart Highway. Larrimah, on the highway and 6 miles north of Birdum, is the point of trans-shipment for passengers and goods and is, at present, the effective terminal. A road-rail freight service operates between Adelaide and Darwin via Alice Springs.

### Roads

The Stuart Highway, 954 miles long, connects Alice Springs with Darwin and runs via Katherine and Tennant Creek. The Barkly Highway, 403 miles long, connects Mount Isa (Queensland) with Tennant Creek and joins the Stuart Highway some 16 miles north of Tennant Creek. The Victoria Highway from Katherine to the Western Australia border (290 miles) is sealed. These highways are used for carrying various freights, including cattle, particularly to and from the railheads at Alice Springs, Larrimah and Mount Isa and provide access to the meat works at Wyndham. The routes are used also for overland tourists and travellers from the southern States to Darwin. The Government three-year program of improvement and maintenance of these highways is nearing completion. There are now approximately 12,527 miles of roads in the Territory of which 2,820 miles are sealed.

Work on the reconstruction and development of beef cattle roads is proceeding; expenditure to 30 June 1972 was \$27.9 million.

The Government has approved the sealing of a 90 mile section of the road between Alice Springs and Erldunda at a cost of \$3.4 million. The sealing of 86 miles of new road to serve the Alligator Rivers region east of Darwin, at a cost of \$4.6 million, is expected to be completed by the end of 1974.

### Posts, telegraph, telephones and wireless

Postal communications is maintained by road, rail and air transport services between major Northern Territory towns and the capital cities of Australia. In addition, vessels belonging to the Western Australian State Shipping Service provide a regular service between Fremantle and Darwin. Inland, the northern part of the Territory receives its mail via Darwin or by means of the aerial services, and the southern districts are served via Adelaide.

The overland telegraph line, covering 2,230 miles runs from Adelaide to Darwin and links Darwin in telegraphic communication with other parts of the world. Trunk telephone lines extend from Adelaide and Townsville to Darwin, providing telephone communication with the capital cities of Australia. These lines also carry interstate telegram and telex traffic and serve the towns along the routes.

Darwin is connected by high frequency radio to Gove Peninsula and to Groote Eylandt. In addition high frequency radio telephone exchanges have been established at Alice Springs and Katherine which provide connections to the telephone network for pastoral, mining, tourist and other organisations throughout the Northern Territory and across the borders into Queensland, South Australia and Western Australia. The majority of homesteads on pastoral leases are equipped with radio transceivers operated under licence from the Postmaster-General's Department.

Regional national broadcasting stations are situated at Darwin, Alice Springs, Tennant Creek and Katherine, and there are two commercial stations situated at Darwin and Alice Springs respectively. Two television stations, ABD Channel 6 of the national broadcasting system and NTD Channel 8, a commercial station, operate in Darwin and a national Television station ABAD Channel 7 commenced transmission at Alice Springs in December 1972.

## Education

*See also* the chapter Education, Cultural Activities and Research.

In February 1973 the Australian Government combined the two existing school systems in the Northern Territory (the welfare schools for Aborigines and the community schools) into a single education authority which has become Australia's seventh public school system.

In 1974 this system will cater for about 23,000 students, a third of whom are Aborigines, and will employ approximately 1,400 teachers. Northern Territory enrolments are expected to continue to increase at a rate between 12 per cent and 14 per cent each year. An extensive building program and intensive teacher recruitment will be a continuing part of the new system's plans.

Prior to February 1973 the welfare schools had been the responsibility first of the Department of the Interior and then of the Department of Aboriginal Affairs. Until 1971 the South Australian Education Department had provided teachers, courses and professional and management services for the community schools which the Australian Government had built and equipped. In July 1970 South Australia announced its intention to withdraw this service. The Commonwealth Teaching Service now provides teachers for Northern Territory schools. It is expected that in 1974 the Service will employ all Northern Territory teachers.

At July 1973 a total of 1,028 teachers were employed in the Northern Territory in 127 schools, including 4 high schools, 2 special schools for mentally and physically handicapped children, 2 Schools of the Air serving students in outback areas and 3 residential colleges in Alice Springs, Darwin and Gove catering for Aboriginal students who wish to extend and complete their education in an urban centre. In addition there were 32 pre-schools with an enrolment of 1,735 pupils.

Of the 4 high schools, 3 are in the Darwin area and one at Alice Springs. A wide choice of subjects is offered to matriculation standard. Secondary education is also provided at Katherine, Alyangula, Tennant Creek, Batchelor and Nhulunbuy at Area Schools.

The Schools of the Air at Alice Springs and Katherine have previously supplemented the work of the South Australian Correspondence School. In 1974 these schools will themselves become Correspondence Schools to which their students will send written work for marking. In addition residential 'drop-in-centres' are planned for Katherine and Alice Springs to enable School of the Air students to join their peers at Katherine North and Alice Springs for a week or two at a time.

The first step in the program to implement the Government policy of providing Aboriginal primary school children in Aboriginal communities with education in their own languages was made in early 1973. Bilingual education programs were initiated at five schools in Northern Territory Aboriginal communities. When the Aboriginal children develop literacy skills in their own language, transition will be made to tuition in English, and then for their studies in both languages and cultures to continue side by side.

Special boarding-away-from-home allowances, correspondence supervision and conveyance allowances are paid to school children in the Northern Territory. In addition limited numbers of special Northern Territory secondary and tertiary scholarships supplement normal Commonwealth Scholarship provisions.

### Theoretical training for apprentices

From March 1974, technical training of apprentices in the Northern Territory will be conducted in the form of block training in all but a few trades. Apprentices from all centres in the Territory will attend the Darwin Community College for a continuous period of approximately eight weeks each year in first and second years and four weeks in third year. In trades where the number of apprentices does not justify block training, courses will continue to be conducted by correspondence with the possibility of weekly supervised study as at present.

### Darwin Community College

The Darwin Community College, due to open in March 1974, will provide a wide range of post-secondary courses including pre-vocational, apprentice and post-trade training in all major trades, business education, secretarial and commercial courses, certificate courses for technicians, lectures and tutorials for external students of the University of Queensland and other institutions, teacher education and a wide range of continuing education courses. The College is the first institution of its type in Australia. It will be an independent institution governed by a Council responsible to the Minister for Education and funded by the Australian Government.

## Finance

Details of receipts and expenditure of the Territory for the years 1967-68 to 1971-72 are shown in the table following. In this table the receipts and expenditure of the Northern Territory have been classified into a National Accounts form. The table covers transactions relating to the Northern Territory in the Commonwealth Consolidated Revenue Fund and the following trust funds: Aborigines Benefits, Northern Territory Government Settlements Canteens, Northern Territory Housing Commission, Northern Territory Housing Loans, Northern Territory Transport and Northern Territory expenditure from the Aboriginal Advancement Trust Account. Details of the financial transactions of the following Northern Territory semi-government authorities are also included: the Northern Territory Port Authority and the Northern Territory Housing Commission (from 1969-70). Details of the financial transactions of the Darwin City Council are also incorporated in the table. Revenue derived by the Commonwealth from income taxes, customs duties, etc., levied in the Northern Territory and expenditure by the Commonwealth in the Northern Territory on such items as defence, civil aviation, railways, etc., and payments to residents from the National Welfare Fund are not included.

(a) Includes movements in cash, investments, etc. (b) Minus sign (—) denotes excess of receipts (from sales) over expenditure on, or purchases of, existing assets, including housing.

## THE AUSTRALIAN CAPITAL TERRITORY

### General description

The Commonwealth Constitution provides that the Seat of Government of the Commonwealth shall be in the State of New South Wales but distant not less than 100 miles from Sydney. After a number of alternative sites were considered, an area of 911 square miles lying approximately 200 miles south-west of Sydney was transferred to the Commonwealth as from 1 January 1911. A further 28 square miles at Jervis Bay were transferred as from 4 September 1915 to serve as a port for the Territory.

The primary responsibility for administering the Australian Capital Territory lies with the Department of the Capital Territory, whose functions include housing, public transport, and municipal services. Education, public health, justice, police, and the provision of basic physical services, including water supply, sewerage and roads, are the responsibility of the Departments of Education, Health, Attorney-General's, and Works. The National Capital Development Commission has the responsibility for the planning and development of the Canberra city area.

The Australian Capital Territory Advisory Council was established in 1930. It has eight elected members and a representative from each of the Departments of the Capital Territory, Works, and Health, and the National Capital Development Commission, as well as an observer from the Department of Education. The Council advises the Minister for the Capital Territory on matters affecting the Australian Capital Territory. Ordinances are submitted in draft form to the Council for advice and comment before being implemented.

At the census of 30 June 1971 the population of the Australian Capital Territory was 144,063, made up of 140,864 in the urban Canberra (excluding Queanbeyan) area and 3,199 in rural areas (including Jervis Bay). The estimated population of the Territory at 31 December 1971 was 77,100 males and 73,500 females, 150,600 persons. *See also* the chapters Population and Vital Statistics.

### National Capital Development Commission

The *National Capital Development Commission Act 1957-1960* provides for a Commission to undertake and carry out the planning, development and construction of the City of Canberra as the National Capital of the Commonwealth. The year 1971-72 was the fourteenth year of the Commission's operations. Construction work was carried out by means of agency arrangements with the Commonwealth Department of Works and private consultants. Details of the expenditure by the Commission in each year from 1964-65 to 1971-72 are included in the table on page 987.

Total expenditure in 1971-72 was \$59.5 million comprising: land development and services \$14.9 million; water, sewerage and stormwater services and headworks \$4.7 million; housing, flats and other accommodation \$9.7 million; educational facilities \$5.6 million; roads, bridges and traffic control \$4.3 million; city works and associated facilities \$3.3 million; Commonwealth offices \$12.7 million; national works \$1.0 million; others \$3.3 million.

The following major works were completed during the 1971-72 financial year by the Commission: Latham, Holder, Fisher and Rivett Primary Schools; Weston Creek High School; Barry Drive Extension; Belconnen Way Duplication; reconstruction of Cotter Road; Kingsford-Smith Drive extensions; Mundaring Drive extension; Namatjira Drive-Waramanga; Capitol Hill Ring Road; Weston Creek Reservoir No. 7; Weston Creek Reservoir No. 9; Majura Valley Sewerage; Gungahlin Cemetery-Administration Building and Stage 1 development; Belconnen Town Centre services; Phillip Enclosed Oval Pavilion; Phillip Swimming Centre; Kingston Lake Ecology Laboratory; Civic Offices Stage 2; Juliana House-Phillip; Russell Offices-Building No. 10; Woden Building No. 5-Phillip; Parliament House extensions (Senate Wing).

Works under construction at the beginning of the 1972-73 financial year included the following projects: Belconnen High School, Stage 2; Melrose High School, Stage 2; Watson High School Library and extensions; Campbell High School Library and extensions; Narrabundah High School Library and extensions; Canberra High School Library and extensions; Holt, Duffy, Melba and Weetangera Primary Schools; Hindmarsh Drive Duplication-Phillip/O'Malley; Southern Cross Drive to Coulter Drive; Weston Creek-Molongo River Bridge; Ginninderra Arterial, Stage 1; Tuggeranong Arterial, Stage 1; re-alignment of Yarralumla Creek; Tuggeranong Sewer Tunnel; Belconnen Reservoir No. 6A; 54 inch Trunk Sewer-Ginninderra Creek; Mount Stromlo to Rivett 36 inch Water Main; Narrabundah Cycling Track; Woden Transport Depot; Horticultural Centre-Weston; Woden Town Centre-continued development; Belconnen Town Centre-continued development; Woden Bus Interchange; Cotter Reserve Development; Weston Park Development; Kingston Transport Depot, Stage 3; Parliament House Extensions (House of Representatives Wing); Cameron Offices; Campbell Park Offices; Trade Group Offices.

## Works and services

### Housing

Until the period following the 1939–45 War most houses and flats in the Australian Capital Territory were built and rented by the then Department of the Interior. More recently, an increasing number of houses and flats have been built by private enterprise, and as a result the proportion of houses and flats in the Australian Capital Territory occupied by tenants of the Department of the Capital Territory (formerly the Department of the Interior) has fallen from 79.7 per cent of total occupied houses and flats in 1954 to 58.3 per cent in 1961, 38.8 per cent in 1966 and 28.1 per cent in 1971. Although the bulk of rented accommodation is provided by public authorities, and this situation will continue thus in the foreseeable future, there has been a considerable increase in the proportion of home ownership in the Australian Capital Territory since 1954. The proportion of houses and flats owned or being purchased by instalments has risen from 19.5 per cent in 1954 to 29.0 per cent in 1961, 45.6 per cent in 1966 and 51.8 per cent in 1971. Home building activity in the Woden Valley and Weston Creek, south-west of the former city area and Belconnen, north-west of the former city area, has continued to expand, and at June 1971 there were 11,280 occupied dwellings in the Woden Valley and Weston Creek area, and 5,145 occupied dwellings in the Belconnen area. *See also* the chapter Housing and Building.

### Municipal services

Canberra has been developed as a garden city. More than eleven million trees and many acres of lawns have been planted since 1927. The development of new areas of parkland and the maintenance of existing tree and lawn areas is the responsibility of the City Parks Administration of the Department of the Capital Territory. Municipal services are also provided by the Department of the Capital Territory.

At 30 June 1972, 41,241 meters were connected to the city water supply, drawn through twenty-two service reservoirs from three storages on the Cotter River with a total capacity of nearly 20,000 million gallons. In 1971–72 some 7,173 million gallons of water were consumed in Canberra, and in addition the system supplied 454 million gallons to Qucanbeyan, New South Wales. Treatment works at Weston Creek, Belconnen and Fyshwick dispose of Canberra's sewage. At 30 June 1972, 816 miles of sewers, 9 miles of rising sewerage mains and 813 miles of storm water drains were laid.

### Department of Works

Apart from the work it carries out on behalf of the National Capital Development Commission, the Department of Works acts as design and supervision agent for other Commonwealth departments and instrumentalities. Total expenditure during 1971–72 on all operations amounted to \$19.05 million (\$16.8 million in 1970–71), comprising: building works—housing \$49 885; other building \$10,665,878; engineering works \$2,161,691; repairs and maintenance—buildings \$2,404,779; engineering \$3,597,536 and purchase of plant \$168,707.

## Production

*See also* the chapters dealing with particular subjects.

### Lands

Reference has been made in earlier issues of the Year Book to the general conditions of land tenure in the Territory and to the area of alienated and leased land, and the chapter Rural Industry of this issue contains statistical information on the subject. (*See also* § 1. Canberra: Fifty Years of Development, page 123 of Year Book No. 49.)

Under the *Seat of Government (Administration) Act* 1910–1972, no Crown lands in the Territory may be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act. In general, leases of land in the city area are granted under the *City Area Leases Ordinance* 1936–1973. In special circumstances land may be leased for purposes other than business or residential under the *Leases (Special Purposes) Ordinance* 1925–1970 and for church purposes under the *Church Lands Leases Ordinance* 1924–1966. As considerable areas of Commonwealth owned land in the Territory are not immediately required in connection with the establishment of the City, they have been leased for agricultural or grazing purposes for terms consistent with the anticipated growth of Canberra under the *Leases Ordinance* 1918–1966. Some lands in the Territory, in areas generally remote from the City, remain in private ownership under freehold title. A program of progressive acquisition of this land is being implemented.

The Commonwealth Territory at Jervis Bay, comprising about 28 square miles, was acquired from New South Wales for the possible provision of port facilities in connection with the Australian Capital Territory. A portion of the area is occupied by the Royal Australian Naval College (H.M.A.S. *Creswell*) and a Royal Australian Navy airfield. Several blocks fronting Sussex Inlet have been leased for guest houses and holiday camps, etc., under the *Leases Ordinance* 1918-1966, and an area of land in the Murray's Beach area has been set aside for possible use as an atomic power station under the control of the Australian Atomic Energy Commission. Apart from picnic and camping areas, experimental planting, afforestation and soil conservation activities, the remainder of the area is being maintained in its natural state.

### Forestry

Forestry operations in the Australian Capital Territory began in 1915 with the planting of pines on the denuded slopes of Mount Stromlo to arrest soil erosion and improve the visual quality of the landscape. In 1926 a program for development of commercial forests was approved following a comprehensive review of the Territory's potential for forest development. Major reviews of this program were made in 1932, 1954 and 1967, always however retaining the basic policy of systematic conservation and development. Much of the better native forest has been placed under management and forestry operations including fire protection treatment have been extended to some 110,000 acres of natural forest in the Cotter Catchment and adjacent areas. The more productive stands in these areas were harvested extensively to provide timber for Canberra's post-war expansion and were subsequently treated to promote regeneration and protect the quality of water harvested.

The policy of forest management in the Australian Capital Territory has been formulated to cater not only for commercial timber production but also to provide recreation facilities and an attractive visual environment for the national capital and to protect the water supply. These policies can be broadly summarised as follows.

- (a) Manage and develop hardwood forest areas in the Australian Capital Territory and Jervis Bay for production of timber and arrange sales of all forest produce.
- (b) Initiate and maintain a variety of growth and environmental experiments to produce information for management decisions.
- (c) Develop and implement viable multiple use policies for forest areas with particular emphasis on recreation potential and facilities, quality of water harvest in catchments and conservation of the environment.

The forest authority is charged with the management of some 150,000 acres of land in the Australian Capital Territory. Of this some 110,000 acres carry native forest or woodland. As at the 31 December 1972 the total area of coniferous plantations in the Australian Capital Territory and Jervis Bay was 31,000 acres. Of 796 acres at Jervis Bay the majority consists of *Pinus radiata* (Monterey Pine) and *Pinus elliottii* (Slash Pine). The plantations in the Australian Capital Territory consist mainly of *Pinus radiata* and *Pinus ponderosa* (Yellow Pine). Total area of *Pinus radiata* was 28,800 acres.

In 1971-72 there was no significant commercial production of hardwood timber from the Australian Capital Territory and Jervis Bay. Currently hardwood logging is restricted to incidental production from silvicultural operations. However, the volume of softwood cut increased to 2.21 million cubic feet (1.93 million in 1970-71). The total value of this unprocessed timber unloaded at the mill (milldoor value) was \$664,000. This returned \$310,000 in royalties (value of unprocessed timber at stump).

In 1972, Australia's first plantation-based integrated timber-converting complex commenced production, processing timber cut in Australian Capital Territory plantations. It produces structural plywood, sawn, dressed and kiln dried lumber and wood chips. Consumption of logs by this complex is scheduled to reach 4.2 million cubic feet per annum by 1975.

### Agricultural, pastoral and secondary industries

During 1971-72 the production of the more important items of the agricultural and pastoral industry was: wheat 26,560 bushels; wool 821,000 kg; whole milk 704,000 gallons; meat (carcass weight), fresh 7,370 tons. The numbers of livestock depastured at 31 March 1972 were: cattle 20,252; sheep 191,560; pigs 127.

As in the Northern Territory, the secondary industries established in the Australian Capital Territory are largely the service industries associated with the growth of the Territory.

The following table shows preliminary results of the Manufacturing Censuses taken in respect of the years ended 30 June 1969 and 1970.

**AUSTRALIAN CAPITAL TERRITORY:  
MANUFACTURING ESTABLISHMENTS, 1968-69 AND 1969-70**

NOTE. Direct comparisons with figures for previous years are not possible because of changes in the census units, the scope of the census and the items of data. For details see Chapter 21, Manufacturing Industry.

		1968-69	1969-70
Establishments operating during year . . . . .	No.	112	111
Persons employed(a) . . . . .	No.	2,653	2,960
Wages and salaries . . . . .	\$m	9.5	11.1
Turnover . . . . .	\$m	31.2	37.0
Opening stocks at 30 June . . . . .	\$m	3.3	3.7
Closing stocks at 30 June . . . . .	\$m	3.7	3.4
Purchases, transfers in and selected expenses . . . . .	\$m	16.9	19.4
Value added(b) . . . . .	\$m	14.8	17.2

(a) Average over whole year. Includes working proprietors. (b) Sales, transfers out and other operating revenue plus increase (or less decrease) in the value of stocks, less purchases, transfers in and selected expenses.

### Transport and communication

Canberra is connected with the railway system of New South Wales at Queanbeyan by a line 5 miles long. This line was opened for goods traffic on 25 May 1914 and for passenger traffic on 15 October 1923. Direct or linking services operate between Canberra and Sydney and Canberra and Melbourne. Two airlines provide many services daily each way on the Sydney-Canberra-Melbourne route. Regular motor-coach services link Canberra with towns in New South Wales, Victoria and South Australia. The total length of roads in the Territory at 30 June 1972 was: bitumen and concrete, 714 miles; gravel, 241 miles; other formed roads, 26 miles; total, 981 miles. There are three radio broadcasting stations in the Territory, 2CY and 2CN of the national broadcasting system and 2CA, a commercial station, and two television stations, ABC Channel 3 of the national broadcasting system and CTC Channel 7, a commercial station.

### Social

See also the chapter Education, Cultural Activities and Research.

#### Education

The *Education Ordinance* 1937-1966 provides for the compulsory attendance at school of children between the ages of six and fifteen years. The Commonwealth Department of Education is primarily responsible for the education of children in the Australian Capital Territory. By agreement, however, the New South Wales Department of Education arranges the teaching program in accordance with its own curriculum and provides teaching staff. It is reimbursed for expenses incurred.

From the beginning of 1973 some changes in this arrangement have occurred. The Commonwealth Teaching Service is providing approximately 500 assistant teachers for Australian Capital Territory schools in 1973 and from the beginning of 1974 the Commonwealth will assume complete responsibility for education in the Australian Capital Territory and the involvement of the New South Wales Education Department will be phased out. An education authority will be set up to administer Australian Capital Territory education.

At 1 August 1973, there were 12 government secondary schools in the Australian Capital Territory providing courses proceeding to the Higher School Certificate. Forty-three schools provided courses at infants and primary levels, three of these being in rural districts and one in the Jervis Bay area.

A school for physically handicapped children is located at Turner Infants School. Special units for deaf children are situated at Ainslie and Mawson Primary Schools and at Telopea Park High School. Classes for mildly intellectually handicapped children are provided at Ainslie, Mawson, Turner, Narrabundah, Scullin and Waramanga Primary Schools, and at Narrabundah and Lyneham High Schools. Two special schools and two pre-schools serve the needs of moderately and some severely intellectually handicapped children. Aphasic children are catered for in two special classes at Forest Primary School, and two reading centres operate at Downer and Hughes Primary Schools. Special English classes are available at four primary schools and five high schools. Educational guidance services are provided by the Education Clinic and through counselling staff. A new school for the mildly intellectually handicapped will open at Deakin, and a new school and pre-school for the moderately intellectually handicapped at Holt in 1974.

The 59 pre-schools including 2 in the Jervis Bay area and a mobile unit which visits outlying areas of the Australian Capital Territory provide pre-school facilities for approximately 4,000 children between the ages of 3 and 5 years. New pre-schools will be opened in 1974 at Macgregor, Flynn and Evatt. Second units will be provided at Waramanga, Rivett, Duffy, Weetangera, Page and Weston. Three new primary schools are planned for occupation early in 1974. One new secondary school will open in 1974.

At May 1973, there were 19,767 pupils enrolled in primary grades of government schools and 10,682 pupils in secondary forms of government schools.

At February 1973, there were 25 non-government schools in Canberra including 7 secondary schools which provide courses leading to the Higher School Certificate. At the same date 6,630 pupils were enrolled in the primary grades of non-government schools and 4,726 pupils were enrolled in the secondary forms of non-government schools.

The Canberra Technical College, which follows generally the curriculum set by the New South Wales Department of Technical Education, provides trade, post-trade, certificate, and some hobby courses. In 1972 the Technical College provided instruction in 120 courses in 21 different schools of study. Student enrolments in April 1973 were almost 7,600.

The Canberra School of Music provides a diploma course and individual study in a range of instrument and voice. At July 1973, enrolments totalled 450. A new school to accommodate between 1,000 and 1,200 students will be available during 1975.

For information about the Australian National University, refer to the section on universities, page 647, Chapter 19, Education, Cultural Activities and Research.

The Canberra College of Advanced Education was established following a decision by the Commonwealth Government in October 1966 to accept the recommendations of a committee of inquiry into the need for a college of advanced education in the Australian Capital Territory. The College is organised into schools and in 1973 courses were offered in the School of Administrative Studies, the School of Applied Science, the School of Liberal Studies, the School of Teacher Education and the School of Computing Studies. It is envisaged that additional schools will be established as other specialised fields of study are introduced.

### Health

The Canberra and Woden Valley Hospitals serve the population of Canberra and the surrounding region. At 30 June 1972 the Canberra Hospital had 683 beds, a visiting medical staff of 230, 44 salaried medical staff, and a nursing staff of 837. Canberra's second public hospital, the Woden Valley Hospital, opened on 1 May 1973 with ward accommodation for up to 36 patients and a total of 174 staff employed. The hospital will become fully operational progressively, eventually having 600 beds. For further information about health services in the Australian Capital Territory see the Public Health chapter in Year Book No. 53 (pages 549-50) and Year Book No. 56 (page 431) for administrative changes which took place in 1969.

### Justice

The Australian Capital Territory has a Supreme Court and a Court of Petty Sessions. There is an Australian Capital Territory Police Force which at 30 June 1973 numbered 435 including the Commissioner and Superintendent. Of the total, 130 were engaged in Number 1 Division located at headquarters including 2 at the Canberra Police Citizen's Youth Club. Number 2 Division which is located at Woden Centre Police Station comprised 91 members including 2 at Jervis Bay and is also responsible for both Embassy and Parliament House Security. The Traffic Division comprised 97 members including the specialised Water Police, those involved in accident investigation, the Breath Analysis and the Safety Education Sections. There were 47 in the Criminal Investigation Division including a Women Police Section of 7. There were also 56 in the Planning and Research Division including one member of the Women Police. The Recruitment and Training Division located at Woden Centre Police Station had a staff of 9 and there were three in the Special Branch.

### Finance

In the following table identifiable receipts and outlay relating to the Australian Capital Territory have been classified in a National Accounts form. The table covers transactions of the Commonwealth Government in respect of the Australian Capital Territory in the Commonwealth Consolidated Revenue Fund and the following trust funds: Australian Capital Territory Forestry, Australian Capital Territory Housing, Australian Capital Territory Transport and Australian Capital Territory Suspende. In addition, details of the financial transactions of the following semi-government authorities are also covered: Australian Capital Territory Electricity Authority, Commonwealth

Brickworks, National Capital Development Commission, the Canberra Theatre Trust, and the Canberra College of Advanced Education. Revenue derived by the Commonwealth from income taxes, sales tax, etc., levied in the Australian Capital Territory and expenditure by the Commonwealth in the Australian Capital Territory on such items as defence, civil aviation, railways, etc., and payments to residents from the National Welfare Fund are not included.

## AUSTRALIAN CAPITAL TERRITORY: RECEIPTS AND OUTLAY

1967-68 TO 1971-72

(\$'000)

## NORFOLK ISLAND

## General description

Norfolk Island, discovered by Captain Cook in 1774, is situated in latitude 29°S., longitude 168°E. approximately. Its total area is approximately 13 square miles, the island being about 5 miles long and 3 miles wide. It is 1,042 miles from Sydney and 664 miles from Auckland. The length of the coast line is 20 miles, and its form that of an irregular ellipse. Except for a portion on the south side and the landing place at Cascade on the northern side, almost inaccessible cliffs rise from the water's edge. The climate is equable, the average daily maximum temperature varying between 18° C and 26° C. The average annual rainfall is 54 inches. The resident population is about 1,500.

The island served as a penal station from 1788 to 1813 and from 1825 to 1855. In 1856, 194 descendants of the *Bounty* mutineers were transferred there from Pitcairn Island.

### Administration

In 1856 the island was created a distinct and separate settlement under the jurisdiction of the Governor of New South Wales. In 1897 it was made a dependency under the Governor of that Colony, and finally, by the passage of the *Norfolk Island Act* 1913, became a Territory of the Commonwealth of Australia. It is controlled by the Minister for the Capital Territory through an Administrator. The Norfolk Island Council was established pursuant to the *Norfolk Island Act* 1957-1969 and is constituted in accordance with the provisions of the *Norfolk Island Council Ordinance* 1960-1970. The Council may consider and tender advice to the Administrator on any matter affecting the peace, order and good government of Norfolk Island, and must be consulted on certain legislative and financial matters. The Council comprises the Administrator as *ex officio* chairman and voting member and eight members elected biennially.

### Economic activity

The major economic activity of the island is tourism. Primary production is barely adequate for local needs and foodstuffs are imported from New Zealand and Australia, mainly for the tourist trade.

*Primary industries.* The soil on the island is particularly fertile, the climate equable and the rainfall fairly evenly distributed except for a pronounced dry period in November. This enables a wide range of temperate and semi-tropical products to be cultivated. However, the island's comparative isolation presents trading difficulties, and production of bean seed, formerly the major export, has declined rapidly since 1962-63.

Fish abound off the island. In the past a number of ventures have been formed to exploit this resource, but they have been short-lived, mainly because of the lack of a sheltered harbour. A modern whaling station was started on the island in 1955, and production commenced during the second half of 1956. Owing to a marked scarcity of whales after 1961, however, the station was closed down.

An active forestry program is being carried out to increase the resources of Norfolk Island pine and to introduce suitable types of eucalypts.

*Tourists.* Regular sea and air services to the island are available for those who seek a quiet holiday in surroundings of beauty and historic interest. There are at present, apart from flats and unlicensed guest houses, hotels and licensed guest houses, and further accommodation is being built to meet the steadily increasing number of visitors.

*Employment.* A large proportion of the population derives its income from various aspects of the tourist industry including the operation of hotels and duty-free stores. The Australian Government provides services through staff from the Departments of Civil Aviation and Science (Bureau of Meteorology) and teachers are seconded by the N.S.W. State Education Department. A number of clerical and other positions are available to islanders in the Norfolk Island Administration. Very few people rely for their income entirely on agricultural pursuits.

### Trade, transport and communication

Imports to Norfolk Island since the 1939-45 War have risen from \$65,000 in 1945-46 to \$3.9 million in 1971-72. The major proportion (\$1.8 million) in 1971-72 came from Australia and the Pacific Islands while New Zealand supplied \$0.6 million. Exports in 1971-72 amounted to \$0.4 million. Exports to Australia and the Pacific Islands, the principal market, amounted to \$0.3 million, while exports to New Zealand amounted to \$62,000. No duties are chargeable on goods imported into Australia from Norfolk Island if the goods are produced or manufactured in Norfolk Island and shipped direct to Australia, and not goods which if manufactured or produced in Australia would be subject to excise duty.

A shipping service to the island operates at approximately four week intervals from Sydney via Lord Howe Island and Norfolk Island to Noumea and Vila, thence to Sydney. A link with New Zealand is maintained by a service operating from Auckland at approximately 26-day intervals and calling at Norfolk, Noumea, Brisbane, Lyttleton and Auckland.

A passenger and air freight service between Sydney and Norfolk Island is operated by Qantas Airways Ltd twice a week, and more frequently in peak periods. The service extends to New Zealand weekly under charter to Air New Zealand Ltd.

There are approximately fifty miles of motor road on the island. A substantial section of the population possesses private motor cars. Hire cars, taxis and scooters are available.

The island has an automatic telephone service and a radio telephone link with Sydney. A local broadcasting service is operated by the Administration.

### Education

Education is free and compulsory between the ages of 6 and 15 years. The school, which is conducted by the New South Wales Department of Education, conforms to the Australian standard of public education, ranging from kindergarten to the School Certificate (Fourth Form) examination. The teachers are provided by the New South Wales Education Department, although they receive salaries from the Norfolk Island Administration. The number of scholars enrolled at 30 June 1972 was 301.

Bursaries are available for pupils who wish to attend a mainland school either to continue their studies beyond the School Certificate level or undertake high school courses not available on the Island. Trainee scholarships are available for pupils who have left school and wish to undertake apprenticeship or similar training away from the Island.

### Judiciary

The judicial system of Norfolk Island consists of a Supreme Court and a Court of Petty Sessions. The Supreme Court is the highest judicial authority in the Territory and is a superior court of record with original criminal and civil jurisdiction. The jurisdiction of this Court is exercised by one judge sitting in Court or, to the extent and in the cases provided by or under ordinance, sitting in Chambers. The jurisdiction of the Court of Petty Sessions is exercised by the Chief Magistrate or any three magistrates other than the Chief Magistrate.

### Finance

The revenue of the Territory, together with an annual grant from the Commonwealth Government for administrative expenses, is paid to the credit of the Norfolk Island Trust Fund, and advances for administrative and developmental expenses are drawn from the account. The principal items of revenue and expenditure for the five years 1967-68 to 1971-72 were as follows.

#### NORFOLK ISLAND: REVENUE AND EXPENDITURE, 1967-68 TO 1971-72 (\$'000)

## PAPUA NEW GUINEA

Greater detail on the subjects dealt with in this section is available in the Papua New Guinea Administration Annual Reports. The sections on pages 990-6 have been prepared by the Director of the Commonwealth Bureau of Meteorology.

### General description

Papua New Guinea comprises the Australian Territory of Papua and the United Nations Trust Territory of New Guinea. The total area of 178,260 square miles lies in the equatorial zone between the equator and 12°S latitude and longitudes 141°E and 160°E.

Papua lies wholly within the tropics. The northernmost point touches 5°S latitude; its southernmost portion, comprising Tagula and Rossel Islands, lies between 11°S and 12°S latitude. It is separated from Australia by Torres Strait. The total area is 86,100 square miles of which 83,325 are on the mainland and 2,775 on the islands of the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups.

The Trust Territory of New Guinea extends almost from the equator to latitude 8°S, a distance of almost 500 nautical miles, and from longitude 141°E to 160°E, a distance of 1,000 nautical miles. The total area is 92,160 square miles, of which 69,095 are on the mainland and 23,065 on the islands, including the two northernmost islands of the Solomon Islands, Buka and Bougainville, and the Bismark Archipelago.

### Weather and climate

The climate, particularly the rainfall, over so wide an area as Papua New Guinea, with its numerous islands and varying elevations, presents many variations. Generally speaking, the climate is hot and humid, except in the highlands where days are mild to warm and nights are cool. Mean temperatures vary little throughout the year, and there are no winter and summer seasons comparable to those of higher latitude.

The predominant seasonal feature is the regular alternation between two major air-streams, the south-east trade winds and north-west monsoon. The 'south-east' season prevails approximately from May to October, and the 'north-west' season persists for a shorter period from about December to early April. Two short spells of calm weather occur between these two seasons.

#### Rainfall

There are great spatial variations in the amount of rainfall received over Papua New Guinea. The variations depend mainly upon the direction and speed of the air streams. These streams are moist, requiring only a small amount of lifting for condensation of water vapour to occur. Topography therefore has a dominating influence on the rainfall distribution.

#### Average annual rainfall

The table on page 992 shows the average annual and monthly rainfall for selected stations. It may be seen that the spatial distribution of average annual rainfall varies greatly, being dependent mainly on topography in relation to prevailing winds. The annual averages vary from 1,200 mm at Port Moresby (township) to 5,870 mm at Kikori at the head of the Gulf of Papua. There are few rainfall observing stations above 6,000 feet, so that rainfall above that height must generally be estimated. The map on page 996 shows the rainfall distribution over the region for the year 1972.

#### Seasonal distribution of rainfall

Places in Papua such as Port Moresby, where the south-east trade wind does not blow directly onshore, have a dry season during May-October. Places such as Kikori have heavier rainfall during May-October because of the onshore south-east winds. In New Guinea, where conditions are more equatorial, rainfall occurs throughout the year, but is heaviest in the November-April period at most places.

#### Variability of rainfall

There are marked variations from year to year in annual rainfall totals. At Port Moresby (township), for example, in forty-two years of record the annual rainfall has varied from 1,830 mm to 580 mm; at Daru in fifty-four years of record the annual rainfall has varied from 3,960 mm to 1,170 mm; and at Madang in forty years of record the variation has been from 4,570 mm to 2,340 mm. The table on page 993 shows the annual rainfall at Port Moresby and Lae for the years 1946 to 1972 inclusive.

### Heavy rainfalls

Highest twenty-four hour rainfall registrations have included 549 mm at Pondo Plantation in New Britain and 447 mm at Cape Nelson on the east coast of the main island. Twenty-four hour falls greater than 400 mm have been recorded at a number of other stations in the Papua New Guinea region. The highest twenty-four hour fall recorded in Australia was 907 mm at Crohamhurst, Queensland. All these registrations were for the restricted twenty-four hours period from 9 a.m. to 9 a.m. Higher falls, possibly approaching 700 mm, have probably occurred in Papua New Guinea in unrestricted periods of twenty-four consecutive hours.

### Temperature

Although the region generally has no summer and winter seasons, it has a wide range in temperature because of elevation differences. For each month the mean daily maximum temperature decreases by about 1°C and the mean daily minimum temperature by about 2°C for each 1,000 feet increase in elevation up to 5,000 feet.

A table on page 993 shows temperature and humidity data for five lowland and two highland stations. Mount Hagen, elevation 5,350 feet, is the highest station for which temperature data are available. However, both day and night temperatures continue to decrease with elevation above this level.

### Average seasonal temperature distribution

In the lowland areas there is a difference in temperature pattern between the areas south of the highlands and those to the north. In the south there is a tendency for temperatures to be lower in the May–October period than in the November–April period (e.g. Samarai). In the north there is little difference throughout the year (e.g. Madang). In the highlands, temperatures are appreciably lower than in the lowlands and are slightly lower in the middle of the year than they are at the beginning of the year (e.g. Goroka). The nights are cold in the highlands throughout the year; the mean daily minimum at Mount Hagen for July is 12.6°C.

### Extreme temperatures

The highest air temperature recorded at Lae (in twenty-two years of record) was 38.7°C and the lowest was 19.1°C; at Port Moresby (in thirty-two years of record) the highest was 36.3°C and the lowest was 14.1°C. The mean daily range of temperature is about 8°C at lowland stations and 11°C at highland stations up to 5,000 feet elevation,

### Humidity

Humidity is high generally throughout the year. In the lowlands persistently high humidity in association with high temperatures is responsible for the human discomfort experienced. The average relative humidity for January and July is shown for selected stations in a table on page 993.

In the lowland areas the average monthly 9 a.m. relative humidity (*see* table on page 993) is in the range 75–95 per cent throughout the year. There is little variation from month to month at any station. This is in contrast with northern Australian localities where the south-east winds of the dry season result in low relative humidities. For example, Darwin's average relative humidity at 9 a.m. ranges from 81 per cent in February to 62 per cent in July.

In the highland areas up to 6,000 feet elevation the average monthly 9 a.m. relative humidity is within the range 80–90 per cent throughout the year. The lower temperatures experienced on the highlands result in conditions being generally more comfortable in those areas.

### Evaporation

The only evaporation data available are records for Port Moresby. These show that the mean monthly tank evaporation varies from 140–170 mm per month in the early part of the year to 170–200 mm per month in the latter part of the year. The average annual tank evaporation at Port Moresby over an eleven-year period was 1,869 mm. It is probable that evaporation is less than this value in the higher humidity areas.

### Sunshine and cloud

Mean daily sunshine hours are recorded for each month at Port Moresby, and the figures show a variation from 6.1 hours per day in February and March to 8.4 hours per day in November. The mean daily amount of sunshine at Port Moresby for the year is 6.9 hours, which is significantly less than Darwin (8.5 hours) but comparable with Brisbane (7.5 hours).

At Port Moresby the mean cloud amount varies from 5.1 eighths per day in June to 6.7 eighths in February; at Lae the variation is from 6.0 eighths in May, October and November to 6.7 eighths in January, February and March. The mean daily cloud amounts for the year at Port Moresby and Lae are 5.7 and 6.3 eighths respectively, which are high in comparison with Darwin (3.2).

### Winds

As mentioned previously the south-east trade winds prevail from May to October and the north-west monsoonal winds prevail from December to March over most of the region. However, the broad-scale wind pattern may be completely masked by the effects of local topography and land and sea breezes. The mean 9 a.m. and 3 p.m. wind speeds and prevailing directions are shown in the tables on pages 994-5 for Port Moresby and Lae.

At Port Moresby the mean winds are stronger during the period May-November than during December-April; for example, the 3 p.m. mean wind for August is 21.1 km/h and for March is 12.9 km/h. The winds at 3 p.m. are much stronger than at 9 a.m.; for example, for the year the 3 p.m. mean wind is 16.5 km/h and the 9 a.m. mean wind is 5.9 km/h. The prevailing direction of the wind is south-east during May-November and north-north-west to south-west during December-April.

At Lae the winds are mainly lighter than at Port Moresby. In the period May-October the winds at Lae are lighter than in the period November-April. The winds at 3 p.m. are greater than at 9 a.m. except in February and March. The prevailing direction is north-west at 9 a.m. and south-east at 3 p.m. throughout the year.

### Storms and cyclones

The Papua New Guinea region is subject to thunderstorm activity, squall lines and local storms throughout the year. Severe thunderstorms are frequent in the mountainous areas, but also occur in coastal lowlands. The main tropical cyclone belt lies to the south of the region, but occasionally a tropical cyclone affects the region, causing loss of life and property.

### Climatological tables

The averages and extremes for a number of elements recorded at Port Moresby and Lae are given in the tables on pages 994-5. These tables generally follow the format given for Australian capital cities included in Chapter 2 of this Year Book, the observational data being for available years of record to 1972 inclusive unless otherwise stated. Some elements included in the Australian capital city tables have been omitted from the tables for Port Moresby and Lae because of the inadequacy of observational records.

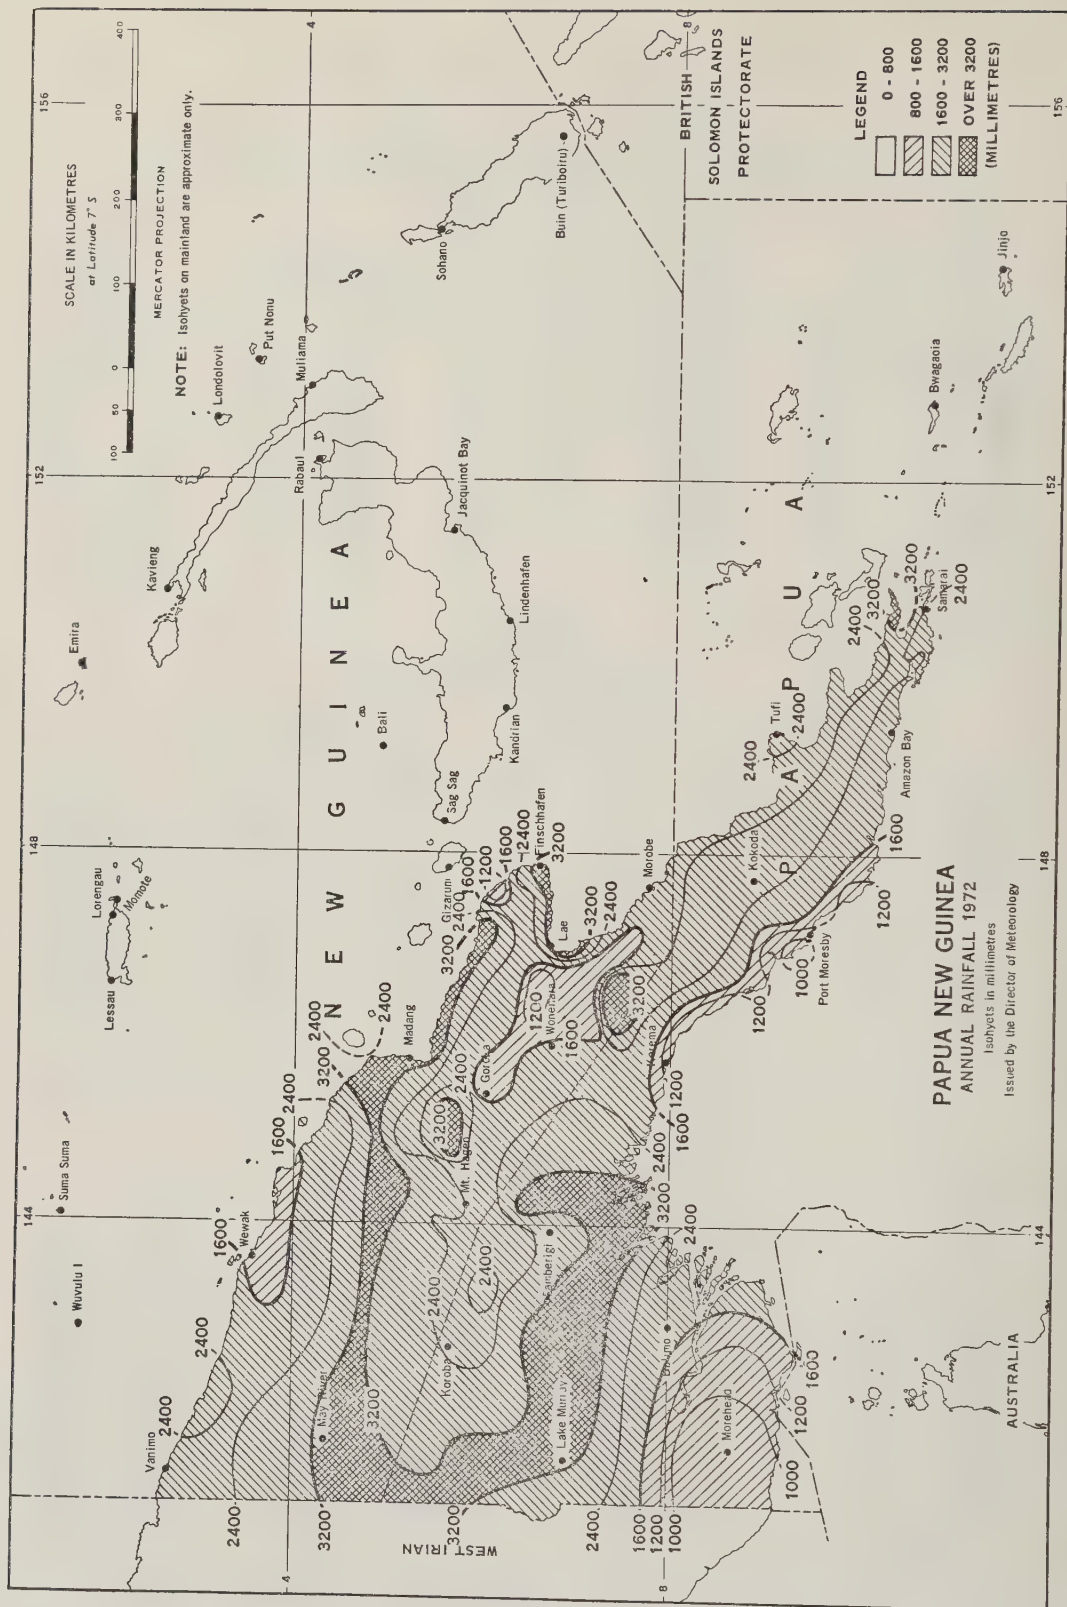

PLATE 55

## Population

The indigenous people of Papua New Guinea may in general be grouped with the Melanesians who occupy the greater part of the Western Pacific. They may be divided into two main types—Melanesian and Papuan—the former representative of the eastern mainland of Papua and the island archipelagos to the east and south-east of Papua, the Bismark Archipelago, the Solomon Islands and the coastal districts of the New Guinea mainland, the latter representative of the western third and interior of Papua and the interior of the mainland of New Guinea. Some negrito traits have been noted in a few of the inland mountain groups. There is a strain of Papuan, and, possibly, of Polynesian blood in the Admiralty Islanders, while the Western Islanders and the inhabitants of the small islands east and south-east of New Ireland are Micronesians.

Censuses of the non-indigenous population of Papua New Guinea have been taken in conjunction with censuses of the Commonwealth of Australia. For the indigenous population of Papua New Guinea, estimates of size, geographic location, and the broad age distribution of the population were available from the results of the Division of District Administration census (formerly known as the Tax Census). This was conducted over most of the country, but was continuous rather than conducted at a common date for all areas covered. No regular pattern of operations was adopted, although once the census had been taken in an area it was in general repeated fairly frequently. Although these estimates were of great value, the limitations of the information on population characteristics and the lack of simultaneous collection for all areas made them insufficient for many purposes. The 1966 census covered both indigenous and non-indigenous population, and provided, for the first time, an almost complete picture of the population of Papua New Guinea.

Figures for the non-indigenous population as enumerated at censuses held in conjunction with Commonwealth censuses and estimates of the indigenous population based on the Division of District Administration censuses are set out below.

(a) 1920; figures for 1921 not available. (b) Includes 34,087 indentured labourers, 1,127 native constabulary, 4,823 attending approved mission schools, and 429 patients at Anelaura Leprosarium and Taskul Observation Colony (New Ireland), for which particulars of sex are not available.

The total indigenous population of Papua New Guinea at the 1966 census was 2,150,317 persons, and the total non-indigenous, 34,669 persons. For details of selected characteristics of Population Census 1966 see Year Book No. 55, pages 1165–69. Estimated totals for 30 June 1972 are 2,531,882 and 49,245 persons respectively.

### Population Census, 1971

Full details from the Population Census 1971 are not yet available. The census was conducted in July 1971 and covered both indigenous and non-indigenous populations. For census purposes respondents were asked to state whether they considered themselves to be indigenous, European, Chinese or of some other race or mixture of these, without the guidelines provided in 1966, however, it is doubtful that this will affect comparability between the two censuses.

Preliminary figures of the population (indigenous and non-indigenous) of the major towns at the census, July 1971, was as follows: Port Moresby, 66,244; Lae, 34,699; Rabaul, 24,778; Madang, 15,751; Wewak, 12,154; Goroka, 10,756; Mount Hagen, 9,609; Daru, 5,074; Popondetta, 4,591; Lorengau, 4,009 (including Lombrum); Bulolo, 3,548; Kavieng, 3,010; Alotau, 2,516; Mendi, 2,277.

The Census completely enumerated virtually all the non-indigenous population, together with all the indigenous population located in areas outside rural villages. The rural village population was estimated by means of a representative sample of approximately 10 per cent of rural villages. Consequently the figures published for the population of rural villages are estimates of total figures based on a representative sample, while those published for other areas are totals based on complete enumeration. Totals for a district or the country as a whole are the sums of these estimated and actual figures.

### Constitutional development

The *Papua-New Guinea Provisional Administration Act* 1945–1946, which provided for the transfer of control from the military authorities to civil authorities after the 1939–45 War, was repealed by the *Papua and New Guinea Act* 1949. The latter Act approved the placing of the Territory of New Guinea under the International Trusteeship system and provided for an Administrative Union of the Territory of Papua and the Territory of New Guinea with one Administrator, a Legislative Council and an Executive Council, one Supreme Court, and one Public Service.

For an outline of the development of the Legislative and Executive (later Administrator's) Councils between 1949 and 1963, see Year Book No. 51, page 117.

In May 1963 the Commonwealth Government passed an amendment to the Papua and New Guinea Act, making provision for a House of Assembly of sixty-four members to replace the Legislative Council. The house then consisted of ten official members appointed by the Governor-General on the advice of the Administrator, forty-four members elected by the people of the Territory on a common roll in forty-four open electorates, and ten non-indigenous persons elected on a common roll in ten special electorates comprising one or more open electorates. The first elections for the House of Assembly were held in February–March 1964, and the inaugural meeting of the new House was convened on 8 June 1964.

The 1963 Act also increased the membership of the Administrator's Council from seven to eleven, seven of whom must be elected members of the House of Assembly.

In October 1966 the Commonwealth Parliament passed a further amendment to the Papua and New Guinea Act, providing for an increase in the membership of the House of Assembly to ninety-four, sixty-nine members representing open electorates, fifteen from regional electorates and ten official members.

The second general election for the House of Assembly was held from 17 February–16 March 1968, and the Second House was convened on 4 June 1968. A House of Assembly Ministerial Nomination Committee in conjunction with the Administrator chose fifteen elected members who were appointed to seven Ministerial Member and eight Assistant Ministerial Member positions.

The *Papua and New Guinea Act* 1968 provided for the Administrator's Council to become the Administrator's Executive Council, deciding major matters of Territory policy. In June 1968 it had its first meetings. It consisted of the Administrator, the seven Ministerial Members, three official Members, and a twelfth member who was an elected M.H.A. but a non-office holder.

The result of constitutional instruments signed in August, 1970 by the Governor-General and the Minister for External Territories was to transfer full authority in relation to specified matters to designated ministerial office holders. This effectively enhanced the role of the Administrator's Executive Council as the Administrator became bound to accept its advice in respect of these specified matters. Ministerial office holders are fully responsible for the functions of the specified departments, or parts thereof.

The third general election for the House of Assembly was held from 19 February to 11 March 1972, and the Third House was convened on 20 April 1972. Following recommendations made by the Select Committee on Constitutional Development appointed by the Second House, the number of

elected members was increased to 100; 82 members representing open electorates, and 18 representing regional electorates. The number of official members was reduced to four. The Ministry was increased to 17, all with the designation 'Minister', and later in 1972 the limit on the number of Ministers was removed. The Administrator's Executive Council consists of the Administrator and 10 Ministers, one of whom is elected by his fellow Ministers to be Deputy Chairman of the Council. Mr M. Somare M.H.A. was elected to the Deputy Chairman's position and as the leader of the governing majority in the House of Assembly, soon became known as the Chief Minister.

A National Coalition Government was formed following the 1972 General Election, with Mr M. Somare (Pangu Pati) as leader and Dr J. Guise (Independent) as deputy leader. Mr J. Chan (Peoples Progress Party) and Mr T. Kavali (New Guinea National Party) lead the other two major party groups which form the Coalition. The National Coalition also had the support of several independent members and the three Mataungun Association members of the House.

In July/August 1972, discussions between the Minister for External Territories, Papua New Guinea Ministers and the Papua New Guinea Leader of the Opposition on further progress to self-government decided on powers which could be transferred at an early date, and initiated study into the transfer of others. It was agreed that Ministerial meetings would be held to discuss future progress as considered necessary.

Two major decisions by the Papua New Guinea House of Assembly in 1972, set the date for self-government and established a Constitutional Planning Committee to make recommendations for a self-governing constitution which would also serve an independent Papua New Guinea. The Australian Government accepted December 1st 1973 as the timing for self-government, and the Labor Government has stated it will work towards an independent Papua New Guinea by 1975. In April 1973 the Minister for External Territories signed instruments which transferred further powers to Papua New Guinea Ministers and gave formal approval to the title of Chief Minister.

Local government was introduced in 1949 by the Native Village Councils Ordinance which was replaced by the *Local Government Ordinance* 1963. The Administrator may establish by proclamation local government councils with authority in defined areas.

To enable the people to participate more fully at district level in the affairs of government in areas of planning and decision making, Area Authorities, consisting of representatives of Local Government Councils in the area, have been set up in the New Ireland District, the Northern District, the Western District, the Southern Highland District, Marus and the Chimbu Districts. There are plans for two authorities in the Western Highlands District. The primary functions of the Area Authorities are to advise the Administrator on district development, and the Minister for Local Government on the allocation of rural development funds. The relationship between various levels of government is one of the questions being considered by the Constitutional Planning Committee.

*Development planning.* In 1968 the Australian Government and the Papua New Guinea House of Assembly endorsed as a working basis for planning the objectives and targets of a development program covering the five years from 1968-69 to 1972-73. In August 1971 the Development Program was reviewed to take account of major changes, mainly resulting from the development of large scale copper deposits on Bougainville.

The program has the following main objectives.

Maximum increase in production consistent with financial and manpower resources and market capacity.

Maximum participation by Papua New Guineans at all levels.

Maximum progress towards financial self-reliance.

Maximum practicable contribution to meeting social needs and raising the level of living of the people.

A new improvement plan is being prepared to cover the period 1974-75 to 1977-78. Consultants have been engaged under the United Nations Development Program to assist the Government to formulate the strategy for the new program. The aim is to produce a program that reflects technical expertise and experience from both inside and outside Papua New Guinea and at the same time is fully endorsed by the House of Assembly.

Following representation by a delegation of Papuan parliamentarians to the Minister for External Territories, seeking special economic consideration for Papua, consultants were engaged to study the problems of the less-developed areas in both Papua and New Guinea. The report of this study will also be used in the preparation of the improvement plan.

### Judiciary

The courts which exercise jurisdiction within Papua New Guinea are: the Supreme Court of Papua New Guinea, District Courts, Local Courts, Village Courts, Children's Courts and Wardens' Courts.

The Supreme Court is the highest judicial authority and has unlimited criminal and civil jurisdiction. Appeals lie from decisions of a single judge to the Full Court of the Supreme Court and, subject to prescribed conditions, from decisions of the Full Court to the High Court of Australia. District Courts have criminal jurisdiction over all summary offences, i.e. generally, all offences punishable by less than 12 months' imprisonment, and conduct preliminary hearings in respect of indictable offences. They also exercise civil jurisdiction over claims for amounts up to \$2,000. Local Courts have criminal jurisdiction over summary offences and may impose penalties not greater than a fine of \$100 or six months' imprisonment, plus civil jurisdiction over matters involving up to \$200. Village Courts are proposed to be set up with village leaders as magistrates. They will have authority for matters involving up to \$100 and jurisdiction over most areas of law with the probable exception of land. Children's Courts have jurisdiction over all offences by persons under the age of 16 years, except the most serious offences, and in affiliation and other child welfare cases. Wardens' Courts exercise jurisdiction over offences against mining laws and civil cases concerning mining or mining lands.

In addition, there is the Land Titles Commission set up under the *Land Titles Commission Ordinance* 1962-1972 to inquire into and determine rights in land, particularly native land. The Commission has a specific function under the *New Guinea Land Titles Restoration Ordinance* 1951-1968 to inquire into and determine claims to interest in land where the official records were lost or destroyed as a result of the Japanese invasion of New Guinea. The future and function of the Land Titles Commission is being examined as part of a Commission of Enquiry into Land matters.

### Agriculture and animal industry

#### Soils

Although many parts of Papua New Guinea are covered by skeletal soils unsuitable for agriculture, there are extensive areas in all districts where fertile soils occur suitable for growing a variety of crops. Soils on the coastal plains consist mainly of alluvium and podsolised alluvium. The coastal swamp soils, of which there are extensive areas in the delta plains of the Sepik and Fly rivers and intermittently around the coasts and along the lower reaches of other rivers, are in general quite unsuited to any form of agricultural development.

Volcanic soils probably offer the greatest prospects for development. They are found mostly on the central plateau and southern foothills of the main island, but there are also areas in New Britain (particularly in the Gazelle and Willaumez Peninsulas), Bougainville and New Ireland, as well as in numbers of smaller islands. Other rich soils are the alluvials of the river valleys. The largest single area of this type is in the valley occupied by the Ramu and Markham Rivers.

#### Land tenure

The *Land Ordinance* 1962-1969 of Papua New Guinea, which came into operation in 1963, replaced much land legislation previously in force separately in the two Territories. This simplification in legislation was a major step towards applying uniform principles to land tenure throughout the whole of Papua New Guinea. All land in Papua New Guinea other than native land or land subject to any estates, rights, titles or interests in force from time to time is Administration land.

There is considerable variation throughout Papua New Guinea in the nature of customary ownership of land. In most areas some rights remain in the landholding group, and individuals within the group have limited rights or use, either for life or for a shorter period. Thus the normal system by which the rights of ownership in land use are acquired is by birth to a landholding group. Transfer of rights between individuals by sale and purchase appears to have been unusual in the past, but this practice is now an established custom in some localities and appears to be increasing. Inheritance may be based on either patrilineal or matrilineal descent, or both. In parts of Papua New Guinea, however, there is a tendency for the whole inheritance system to change, particularly in communities where it is based on matrilineal descent. Following a close study of the problems in relation to land holdings by indigenes, the Government has laid down the following broad principles of policy.

The ultimate and long-term objective in Papua New Guinea is to introduce a single system of land holding regulated by the central Administration by statute, administered by the Department of Lands, Surveys and Mines of the central Administration and providing for secure individual registered titles after the pattern of the Australian system.

Only the Administration working through the Department of Lands, Surveys and Mines and through the Registrar of Titles may issue and register land titles.

Land subject to native custom remains subject only to native custom until it is taken out of custom either by acquisition by the Administration or by a process, provided for by the *Land (Tenure Conversion) Ordinance* 1963–1967, of conversion of title to an individual registered title. Upon either acquisition or conversion of title, compensation is provided in respect of extinction of rights under native custom.

Land held under native custom may not be acquired outside of native custom by other than the Administration. Land may not be acquired by the Administration except for prescribed public purposes unless the native owners are willing to sell and the Administration is convinced, through its Division of District Administration, Department of the Administrator, that the land is not required by them, and conversion of title from native custom to individual registered title may take place only if all those interested in the land under native custom consent to conversion and the method of conversion.

The services of Commissioners under the *Land Titles Commission Ordinance* 1962–1972 are used, as a first priority, on investigations into claims by the Administration that land is ownerless and may therefore be declared administration land, on investigation into the ownership under native custom of land proposed to be acquired by the Administration, on settlement of disputes about the ownership of land held under native custom, and on investigations into the rights held under native custom in land proposed to be converted to individual registered title. The Commissioners, as opportunity offers, continue investigations into the holding of land under native custom; the results of such investigations are recorded for use in connection with future acquisitions or conversions of title.

The legislation and administrative steps necessary to put the remainder of this policy into effect are well advanced.

At 30 June 1972, the distribution of alienated land in Papua New Guinea according to tenure was as follows.

Held by private non-indigenous inhabitants—freehold land, 535,071 acres; leasehold land, 1,005,702 acres; land tenure conversion (freehold), 9,255 acres;

Native reserves, 94,033 acres;

Other Administration land including land reserved for public purposes, 3,797,240 acres.

## Primary industries

### General

The products of Papua New Guinea are obtained principally from its agricultural, forestry, mining, and fishing industries. Indigenous subsistence agriculture, fishing and hunting produce most of the food requirements of the indigenous population. The main indigenous agricultural products are taro, yams, sweet potatoes, bananas, and pawpaws. Peanuts are becoming of increasing importance in the indigenous diet. Non-indigenous enterprise produces most of the commodities exported. Indigenous in recent years have taken up the production of introduced crops such as peanuts, rice, cucurbits, and maize for their own consumption and produce copra, coffee, cocoa, tea, passion-fruit, pyrethrum and palm oil for export.

The principal agricultural products for the export trade are copra and coconut oil, cocoa, coffee and rubber, but exports of timber and timber products are substantial and the export of tea and palm oil is increasing.

### Non-indigenous crop production

In 1970–71 there were 1,255 holdings in use by non-indigenous persons. The total area of these holdings was 1,018,345 acres. The following tables summarise the information available for principal activities.

**Indigenous agriculture**

Most of the indigenous inhabitants of Papua New Guinea are agriculturalists producing fruit and vegetables for their own consumption. The crops grown vary according to environment and altitude and include yams, taro and sweet potatoes, coconuts, bananas, papaws, maize, sugar cane, cassava, beans, peanuts, rice, cucurbits, and tobacco. Sago is the staple food in the extensive semi-inundated areas which occur along the lower valleys of the major rivers. In these areas it is cut largely from naturally occurring stands. In other parts of the country small areas of sago are grown along stream banks and in swampy patches and are regarded as a reserve in times of poor harvest. In recent years the indigenes have taken up the production of introduced crops such as peanuts, rice, cucurbits, tobacco and maize for their own consumption, and cocoa, coffee, tea, palm oil, passion fruit and pyrethrum for export. Some small-scale rubber growing is now being undertaken. In coastal areas large quantities of copra are produced. In 1970-71 estimated indigenous production was: copra, 46,650 tons; coffee, 19,032 tons; cocoa, 8,053 tons. In many localities the indigenes follow a farming system known as bush fallowing rotation, which is described in Year Book No. 48, and earlier issues.

The growing of food is done by both the men and the women. The division of work is usually clearly defined within the village itself, but this division is not necessarily the same in all areas. Generally the felling of forests is done by the men, and carrying the harvested food home to the village is done by the women. Other work, however, such as cultivating, planting and weeding may be done by either men or women according to the customs of the particular village or area.

The advancement of indigenous agriculture for local food supply and improved land use in village gardens as well as for economic production of crops for sale have a high priority in Government policy for Papua New Guinea. In recent years the Administration has intensified the program of agriculture extension work among the indigenes. Indigenous cattle projects are increasing rapidly, and the greater part of the country's coffee crop is produced by the indigenous sector.

**Livestock**

Total cattle on non-indigenous holdings at June 1971 was 72,925. Indigenous involvement in the cattle industry is being encouraged. An estimated 8,862 head of cattle were owned by indigenes in 1970. Dairy farming is carried out on a small scale near major towns.

A number of British breeds of cattle are represented, but for best results the use of Zebu cross-bred types of cattle is desirable. For dairying the Jersey seems to be the best breed and adapts quite well to tropical conditions.

A central abattoir controlled by the Administration has been set up at Lae and Administration slaughterhouses at Port Moresby, Goroka and Mount Hagen. There are smaller private slaughterhouses at other centres.

The following table shows the numbers of the various kinds of livestock on non-indigenously occupied holdings in Papua New Guinea at 30 June for the years 1969 to 1971.

Total poultry . . . . .	172,873	198,024	179,195

(a) Only recorded where poultry products are marketed or flocks exceed 100 birds.

**Survey of indigenous agriculture and ancillary surveys, 1961-62**

A survey of the agriculture of indigenes of Papua New Guinea was carried out in 1961-62 by the Papua New Guinea Bureau of Statistics in conjunction with the Commonwealth Bureau of Census and Statistics and the Papua New Guinea Department of Agriculture, Stock and Fisheries. A comprehensive report on the surveys was published by the Papua New Guinea Statistician in 1963, and reference should be made to this for further information. A summary of the principal results of the survey appears on pages 1104-10 of Year Book No. 52. Statistics of indigenous cash crop and cattle projects are compiled annually by the Administration's Department of Agriculture, Stock and Fisheries.

### Forestry

Many species of tropical timbers are found in Papua New Guinea, and there is a large pure stand of Klinkii pine in the Bulolo Valley. This timber is used mainly for the production of plywood and veneer. The Papua New Guinean forests produce all local timber requirements as well as exports of logs, sawn timber, plywood and veneer. The administration operates a forestry school at Bulolo to train forestry officers, and has established a research centre for forest products at Hohola near Port Moresby as well as regional silvicultural stations and a large herbarium at Lae.

The Administration is making available for public application a number of extensive timber areas estimated to contain a total of about 14,000 million super feet of logs and possibly twice this quantity of pulpwood. It is intended that those areas should form the basis for the development of integrated forest industries, which would be large and economically viable. Feasibility studies have been undertaken by consultants and some interested firms. Subject to negotiation the areas will be allocated on long-term permits. The Administration has acquired from the indigenous peoples timber rights over 4.9 million acres of forest for industrial development. Reforestation of permanently dedicated land is being undertaken by the administration, the area planted to date being 25,423 acres.

At 30 June 1973, 72 permits and 36 licences were current, the total area of forest involved being 2.4 million acres. The total number of sawmills was 68 and the total sawn timber produced during 1972-73 was 60.0 million super feet. Total log production was 352 million super feet (true volume) of which 191.1 million was exported.

### Fisheries

Over 1,400 different species of fish are to be found in the coastal and inland waters of Papua New Guinea and many are important food fish. Those of greatest commercial significance are tunas (mainly skipjack), prawns, barramundi, and tropical lobster. Efforts are being made to encourage indigenous fishermen to regard fishing as a source of cash income and not merely as a means of subsistence. This involves the Administration in research and extension work and requires the improvement of refrigeration, transportation and marketing facilities throughout the country. In the Highlands there is increasing interest in fish culture in freshwater ponds.

Commercial fishing for prawns by joint venture companies is increasing and considerable expansion is likely in the tuna fishery, in which three Japanese and one United States of America joint venture companies are at present engaged.

In 1970-71 the main exports of marine produce from Papua New Guinea were 19,802,000 lb of tuna and 811,630 lb of frozen crayfish tails and prawns valued respectively at \$1,317,000 and \$876,000. Exports of cultured pearls amounted to \$867,000. Other important exports are crocodile skins, marine shell and barramundi.

### Mining

A large number of minerals have been found in Papua New Guinea, including platinum, gold, silver, copper, tin, lead, zinc, cinnabar, iron, osmiridium, manganese, sulphur, chromite, gypsum, lignite and brown coal.

A large low grade copper deposit with ore reserves of 900 million tons of ore containing 0.48 per cent copper and 0.36 dwt per ton gold has been developed by Bougainville Copper Pty Ltd, a partly owned subsidiary of Conzinc Rio Tinto Australia Ltd, with a 20 per cent shareholding by the Administration. Production began in 1972 and ore is expected to be mined at the rate of 30 million tons per annum. Production for 1972-73 was 164,234 long dry tons of copper, 577,706 troy ozs. of gold and 1,275,053 troy ozs. of silver for export.

Before the 1939-45 War, gold was an important item in Papuan production, but it has since dwindled to insignificance. Large quantities of copper ore were mined and exported up to 1940. A large low grade copper ore body is being considered for development in the Star Mountains, near the West Irian border. Extensive deposits of magnetite sands exist along the Gulf of Papua coastline, but these contain the undesirable impurity titanium, and ways of separating this from magnetite are under investigation. The production of gold in New Guinea decreased from \$1,414,238 in 1959-60 to \$792,290 in 1971-72, but will increase greatly in 1972-73.

The laws in operation governing mining are the *Mining Ordinance* 1928-1966, the *Mines and Works Regulation Ordinance* 1935-1962 and the *Mining Development Ordinance* 1955-1960 and the regulations made thereunder.

Indications of oil have been found at scattered locations over a large area, but commercial quantities have not been discovered. Natural gas has been found in several wells in the Gulf District (including offshore), but its commercial use is not yet economically feasible.

At 30 June 1973, 31 permits and licences were effective under the provision of the *Petroleum (Prospecting and Mining) Ordinance* 1951-1968 and the *(Commonwealth) Petroleum (Submerged Lands) Act* 1967-1968.

## Secondary industries

The major manufacturing industries are generally those processing primary products, mainly for exports. Examples of these are plywood, coconut oil, copra by-products, desiccated coconut and pyrethrum.

Industries catering for the rapidly expanding local market remain numerically predominant. These include the brewing of beer, furniture making and assembly of electrical appliances; the production of cigarettes and twist tobacco, aerated waters, clothing, plastic articles, concrete products, glass bottles, drums, industrial gases, chemicals, fibreglass products, nails and other wire products, packaging and paper products, paints, metal louvre frames, wood preservative, metal roofing, water heaters, cast-iron stoves and other building materials, tyre repairs, fire protection equipment, agricultural machinery, matches, printing and ship-building.

A wide variety of services has also been established such as engineering workshops, plumbing establishments, motor repairs and electrical services.

### PAPUA NEW GUINEA: SUMMARY OF FACTORY OPERATIONS 1968-69 TO 1970-71

(Source: *Secondary Industries Bulletin* 1970-71, Papua New Guinea Bureau of Statistics)

	1968-69	1969-70	1970-71
Number of factories(a)	609	669	697
Average number employed(b)	13,287	13,839	14,766
Salaries and wages paid(c)	14,016	15,990	18,269
Value of power, fuel, light, etc., used(d)	1,806	2,053	2,722
Value of materials used(e)	38,382	44,251	52,930
Value of production(f)	35,043	34,939	46,950
Value of output(g)	75,231	86,244	102,603
Value of land and buildings(h)	19,852	22,855	29,412
Value of plant and machinery(h)	24,206	25,538	28,022

(a) Any factory, workshop or mill in which four or more persons are employed or power other than hand is used.  
 (b) Average weekly employment including working proprietors. (c) Excludes drawings by working proprietors.  
 (d) Includes water and lubricating oil. (e) Includes value of containers, packing, etc., tools replaced, and repairs to plant.  
 (f) Value added in process of manufacture (i.e. value of output less value of materials and power, fuel, etc. used).  
 (g) Value of goods produced including amounts received for repair work and other work done. (h) Depreciated or book value at end of year, including estimated value of rented premises and machinery.

### PAPUA NEW GUINEA: FACTORY OPERATIONS BY CLASS OF INDUSTRY, 1970-71

(Source: *Secondary Industries Bulletin* 1970-71, Papua New Guinea Bureau of Statistics)

	Class of industry				Total
	Industrial metals machines and conveyances	Food, drink and tobacco	Sawmills, plywood and joinery	Other industries	
Number of factories	338	110	152	97	697
Number of employees—

Salaries and wages paid	9,253	2,581	3,567	2,869	18,269
Value of power, fuel and light, etc.	479	713	367	1,163	2,722
Value of materials used	13,682	20,054	7,529	11,665	52,930
Value of production	16,506	11,353	9,100	9,991	46,950
Value of output	30,667	32,120	16,996	22,820	102,603

See footnotes to previous table.

NOTE. Electricity generation is included in 'Other industries'.

## Electric power generation and distribution

### Electric power generation and distribution

*Papua New Guinea Electricity Commission.* Responsibility for the operation and establishment of the electrical undertakings in Papua New Guinea is vested in the Papua New Guinea Electricity Commission whose headquarters are located at Port Moresby. The Papua and New Guinea Electricity Commission as it was then known was established by the *Papua and New Guinea Electricity Commission Ordinance* 1961 and on 1 July 1963 acquired the assets of the Electrical Undertakings Branch of the Department of Public Works. In Papua New Guinea the Commission owns and operates the electrical undertakings at Port Moresby, Lae, Rabaul, Madang, Wewak, Goroka, Kavieng, Samarai, Yonki, Kerevat and Kieta. It also maintains, operates and carries out administrative functions relating to the electrical undertakings at Mount Hagen, Kundiawa and Kainantu. In addition, it has regulatory functions associated with the licensing of electricians and contractors, the control of franchise holders, the approval of appliances and electrical materials for use in Papua New Guinea, and it operates showrooms at major centres for the purpose of selling electrical appliances.

*Generating facilities.* The Commission owns and operates hydro-electric power stations at Port Moresby, diesel and hydro-electric stations at Goroka and diesel stations at other centres. At Lae, local diesel generation is supplemented by purchases of power in bulk from the Baiune Hydro-electric Power Stations of Commonwealth New Guinea Timbers Ltd. At Kieta the Commission purchases bulk power generated in the Bougainville Copper Pty Ltd steam power station at Anewa Bay. The installed capacity of generating plant at centres owned or managed by the Commission at 30 June 1973 was as follows.

<i>Centre</i>	<i>kW</i>
Port Moresby . . . . .	(a)37,020
Lae . . . . .	(b)13,040
Rabaul . . . . .	5,360
Madang . . . . .	5,900
Goroka . . . . .	(c)2,871
Wewak . . . . .	2,090
Kavieng . . . . .	660
Samarai . . . . .	440
Yonki . . . . .	1,600
Kerevat . . . . .	1,035
Mount Hagen . . . . .	(d)2,225
Kandiawa . . . . .	300
Kainantu . . . . .	300
<b>Total . . . . .</b>	<b>72,841</b>

(a) Includes 1,520 kW hydro set being commissioned.  
 (b) Includes 3,200 kW diesel set being commissioned.  
 (c) Includes 600 kW hydro. (d) Includes 124 kW hydro.

The total substation capacity of all the Commission systems combined amounts to approximately 101,785 kVA divided up among 694 stations. The number of consumers served by the Commission at 30 June 1973 was estimated as 23,574.

The Commission also maintains the generating plant and distribution systems in minor centres acting as an agent of, and from funds provided by, the Government. The installed capacity of continuous duty generating plant in the 135 minor power stations owned by the Government at 30 June 1973 was approximately 8,130 kW, excluding emergency plant. The centres of Wau, Bulolo, Kupiano, Napa Napa, Gemo Island and Banz are supplied by private electrical undertakers under franchise from the Commission.

The demand for power throughout Papua New Guinea continues to increase, although the rate of growth has lessened. In Port Moresby, contracts have been let for the installation of two 6 mW sets at Rouna No. 3 Power Station which is under construction alongside the existing Rouna No. 1 Station. When commissioned in mid-1974 this Station will boost the city's installed generating capacity to 49 mW.

New diesel plant was commissioned at Madang, Goroka and Kerevat during the year ended 30 June 1973 and the installation of two 3.2 mW diesel sets at Lae Power Station was nearing completion.

Contracts have been let for the design, manufacture and installation of three 15 mW generators at the Ramu No. 1 hydro-electric power station. Stage 1 of which is under construction near Kainantu in the Eastern Highlands. Work has also commenced on the erection of some 330 miles of high-voltage transmission lines which will interconnect the new station with the towns of Lae, Madang, Goroka, Mount Hagen and some smaller Highland centres. This scheme is scheduled for commissioning in mid-1975.

*Future development.* The Commission is investigating other power developments for Port Moresby. Alternatives include Rouna No. 4 Power Station of 12 mW, Musa River Hydro-electric Scheme which may be built in stages to the ultimate potential of about 400 mW and the possible inter-connection of the Port Moresby System with the Ramu Scheme. Economic feasibility studies are being carried out to determine the pattern of development of the Ramu Scheme as well as supply to possible copper ore projects near the West Irian border. Alternatives being considered include further power stations and a dam (at Yonki) on the Ramu River, and another power station on the Waga River near Mendi.

In conjunction with a large Japanese firm of consulting engineers, the office studies and field investigations continue for the utilisation of the over 1500 mW power potential of the Purari River. To cater for the future power requirements of the developing timber and oil palm industries in West New Britain, investigations have commenced to evaluate the hydro power potential of the Lobu River near Lake Hargy.

### Trade, transport and communication

#### Value of imports and exports

##### PAPUA NEW GUINEA: IMPORTS AND EXPORTS, 1967-68 TO 1971-72 (\$A'000)

(a) Dessicated coconut, copra oil and copra pellets. (b) Logs and sawn timber. (c) Plywood, veneer and battery veneer. (d) Raw and scrap rubber.

## Shipping

In 1971-72 shipping entries (excluding coastal shipping and cargoes) at Papua New Guinea ports totalled 2,031, and 1,627,000 tons of cargo were discharged and 976,000 tons were loaded. Corresponding figures for 1970-71 were 2,019, 1,498,000 and 865,000 respectively.

Regular passenger and freight services operate between Australia and Papua New Guinea. Vessels trading between Australia and the East also call at Papua New Guinea ports, and there are services from continental and United Kingdom ports. Coastal and inter-island shipping services are maintained by vessels operating from the principal ports of the country.

**Other forms of transport and communication**

Scheduled flights provide a network of air transport throughout Papua New Guinea and regular air services link the country with Australia and neighbouring countries, also with Manila, Hong Kong, Honiara and Jaipura. There were 441 licensed aerodromes in the whole of Papua New Guinea at 30 June 1973, and of these 10 were the responsibility of the Department of Civil Aviation, 136 are Papua New Guinea Government owned commercial airfields, 94 are privately (i.e. non Government) owned commercial airfields and 201 are restricted airfields either Papua New Guinea Government or privately owned. Much of the internal traffic and freight is carried on a charter basis.

**PAPUA NEW GUINEA: AIR TRANSPORT; SUMMARY OF SCHEDULED AND CHARTER SERVICES, 1967-68 TO 1971-72**

1972 .	206,755	3,325	608	472,641	8,107	1,080	233,144	21,867	104

(a) Services to ports outside Papua New Guinea.

(b) Internal scheduled airline services only.

At January 1972 there were 10,117 miles of roads in the country. Total motor vehicle registrations (excluding defence force vehicles) at 31 December 1971 were 38,163.

Telephone services operate between the main centres by radio telephone. These together with telex and telegraph services are operated within the country by the Department of Posts and Telegraphs, while overseas traffic is handled by the Overseas Telecommunications Commission. The Australian Broadcasting Commission broadcasts on medium wave and short wave from Port Moresby and Rabaul. The Administration Department of Information and Extension Services operates transmitters at a number of centres, broadcasting programs in several local languages.

### Indigenous labour

From an estimated 190,000 indigenous workers, some 140,000 were enumerated in the Department of Labour count of the indigenous labour force as at 30 June 1970. Of the enumerated indigenous labour force, 29 per cent were employed by the Papua New Guinea Government and Australian Government Departments. Private industry employed 71 per cent. The larger industries employed the following percentages of the workforce; rural industry, 30 per cent; building and construction, 11 per cent; commerce, 11 per cent; manufacturing, 7 per cent and transport and storage, 5 per cent. Of the uncounted 50,000, approximately 8,000 were in private domestic service, 3,000 were enlisted Service personnel, and most of the balance were employed in the rural sector. The number of skilled indigenous workers continues to increase.

At 31 December 1971, 1,135 tradesmen, including 5 expatriates, had satisfactorily completed their indentures in 29 trades and had been awarded completion certificates. At the same date 1,618 apprentices, including 52 expatriates, were undertaking indentures under provisions of the *Papua New Guinea Apprenticeship Ordinance 1967-1970*. In addition there are approximately 650 vacancies notified for the 1972 intake. It is expected that approximately 450 apprentices will satisfactorily complete their indentures during the period 1 January to 30 June 1972.

Minimum conditions of employment for Papua New Guinean workers are prescribed by statute under the *Native Employment Ordinance* 1958–1971, and the *Public Service (Papua and New Guinea) Ordinance* 1964–1971. The minimum rate of pay is prescribed under the *Industrial Relations Ordinance* 1962–1971, and can further be raised by a Minimum Wage Board which may be established under that ordinance. Conditions of employment and wage rates are also prescribed by awards negotiated by agreement between organisations of employers and employees and by determinations of arbitral tribunals established under the *Industrial Relations Ordinance* 1962–1971 and the *Public Services Conciliation and Arbitration Ordinance* 1969–1970.

The minimum statutory wage for an unskilled worker is \$5.90 a week. Where a worker is provided with accommodation, food, clothing and other issues, deductions may be made from the cash wage by agreement between employer and employee up to legally prescribed limits or as authorised by a District Labour Officer of the Department of Labour. The maximum permissible deductions for accommodation and food are 87 cents and \$2.50 a week respectively.

General employment awards are in force in Lae, Goroka, Mount Hagen, Madang, Wewak, Kavieng, Rabaul, Lorengau, Popondetta, Samarai-Alotau and Bwagaoia and Port Moresby. These agreements apply to all workers employed by members of the Employer's Federation regardless of whether or not they are members of a Workers' Organisation (other than those employees directly engaged in primary production, domestic duties, stevedoring operations in shipping services or apprentices indentured under the *Apprenticeship Ordinance* 1967–1970). In many of the above centres or localities the agreements are applied to all workers engaged not only by members of the Employers' Federation but also by employers who are not members of the Federation due to common rules being declared. The agreements cover annual and sick leave entitlements and rates of pay and conditions of employment for workers in those areas. In all cases the agreements are negotiated between the Employers' Federation of Papua New Guinea and the local workers' association or union.

In addition to agreements applying to workers in particular localities there are also awards which apply to workers in particular industries, e.g. stevedoring, timber, building and construction, mining and shipping.

The minimum wage rates for adult unskilled workers in industries and locations covered by awards and agreements range between \$6.50 and \$11.50 a week. Margins for skill are prescribed for semi-skilled and skilled workers ranging up to about \$30 a week.

The *Industrial Organizations Ordinance* 1962–1970 provides for the registration and control of industrial organisations. At 30 June 1973 there were forty-four registered employees' organisations in Papua New Guinea with a total membership of 36,073 workers, of which 32,615 are Papua New Guineans. Twelve of the above employee organisations have joined together to form the Federation of Workers' Associations of Papua New Guinea. Another four have joined together to form a Council of Trade Unions which was registered on 31 May 1973.

The Bureau of Industrial Organisations is a statutory authority established on 23 March 1972. The functions of the Bureau are to provide advice and assistance in the establishment, administration and development of industrial organisations and to provide courses and programs of training for members and officials of industrial organisations.

The Papua New Guinea Labour Advisory Council advises the Administrator's Executive Council and the Government on labour matters generally, and in particular on:

- methods of improving industrial relations,
- measures needed to achieve full and efficient use of the country's manpower,
- methods of bringing about rapid localisation of the work force in the private sector and incentives and other measures to achieve this end,
- measures to improve productivity, and
- trade union development.

## Housing

Village housing is constructed to traditional patterns using local materials including bush timber, bamboo, grass, pit-pit and sago palm leaves. Town housing is generally constructed from comparatively expensive imported material including fibrous asbestos cement, aluminium and galvanised iron. The majority of houses are timber framed and made from both locally milled and imported timber.

The rapid growth of urban areas consequent upon increased economic development has created a housing shortage. Major programs are directed towards reducing this shortage.

The Housing Commission was established in 1968, with charter to construct housing and accommodation for all sections of the community. The intention is for the Commission to progressively assume responsibility for all Administration houses in its areas of operation. The Commission currently operates in Port Moresby, Lae, Madang, Rabaul and Goroka.

The major urban centres in Papua New Guinea have squatter settlement problems. Squatter houses are mostly of the substandard shanty type. The Administration and the Housing Commission are assisting squatters with self-help housing schemes in both existing squatter settlements and new resettlement areas by providing housing allotments, supervisory staff, building materials at cost price, and basic services. Self-help housing schemes are to be expanded significantly over the next five years, particularly in the major urban centres.

## Education and health

### Education

Schools in Papua New Guinea are conducted by the Papua New Guinea Government and various Christian missions. In February 1970 the Australian Government adopted the recommendations of the Advisory Committee on Education in Papua New Guinea, and the House of Assembly subsequently passed the *Education (Papua New Guinea) Ordinance, 1970* and the *Teaching Service (Temporary Provisions) Ordinance 1970*. The new legislation provided for the voluntary merger as from 1 July 1970 of mission schools and colleges and teaching staff, with those of the Administration, into a unified National Education System and a single National Teaching Service. A representative National Education Board and a number of District Education Boards were created to advise on educational planning and administration at the national and district levels respectively. A Teaching Service Commission was also created to employ teachers and to determine their salaries and conditions of service.

At 30 June 1972 there were 227,699 children enrolled in 1,658 primary schools in the Papua New Guinea national education system; and a further 30,350 enrolled in 151 secondary technical and vocational schools. Some 6,688 of the 9,062 teachers employed in schools were Papua New Guineans. Qualified teachers are recruited from Australia and overseas and some are trained at the Canberra College of Advanced Education, and in 12 teachers' colleges in Papua New Guinea, 11 of these are primary colleges and one secondary, conducted by the missions and the Papua New Guinea Government.

At the post-secondary level of education there are a range of specialist vocational training institutions including two Universities.

The University of Papua New Guinea and the Papua New Guinea University of Technology are autonomous institutions offering courses at both degree and diploma level. The University of Papua New Guinea has faculties of Arts, Law, Science, Education, Medicine and Agriculture. In 1973 there were 1,020 full-time and 407 part-time students enrolled in degree, diploma and post-graduate courses. Of these 1,004 are Papua New Guinean students. As at May 1973 there had been a total of 192 graduates from the University of whom 105 were Papua New Guineans.

The University of Technology offers degree and diploma courses in civil, electrical and mechanical engineering, architecture, building, surveying, valuation and chemical technology. Certificate level courses are also being introduced as needed. There were 535 Papua New Guineans and 11 expatriates enrolled at the University of Technology in 1973. The total number of graduates as at December, 1972 was 42, of whom 38 were Papua New Guineans.

There are four technical colleges in Papua New Guinea offering a wide range of trade apprenticeship and secretarial courses. Certificate level courses are available in the engineering, building and commercial fields. The Vudal Agricultural College offers a post form IV Diploma course in agriculture and lower level certificate courses are provided at two agricultural training centres. The Bulolo Forestry College offers a diploma course in Forestry.

There are three Government and seven Mission Primary Teachers' Colleges. Secondary Teacher training is provided at the Goroka Teachers' College and at the University of Papua New Guinea. Most of the other post-secondary institutions are operated by government departments and include the Co-Operative College, Police College, Public Service Board Administrative College, Local Government Council Staff College and the Para Medical Colleges. To ensure that there is co-ordination among post-secondary training institutions and that the future development of post-secondary courses is related to Papua New Guinea manpower needs, the Government has now established an Office of Higher Education within the Department of the Chief Minister.

*School of Pacific Administration.* In November 1971, the Commonwealth Government decided that the Australian School of Pacific Administration at Mosman, Sydney, would be developed as an important centre for training Papua New Guineans.

In its new role, the School is supplementing training and undertaking specially structured training which cannot be better or more conveniently provided in Papua New Guinea or elsewhere in Australia. The School is concentrating on administrative and specialised training to prepare Papua New Guinean Public Servants.

The School's program provided for over 296 Papua New Guineans to attend courses during 1973. Of this number, 120 have undertaken vocationally oriented courses of 8 months duration to upgrade their qualifications for advancement within the Papua New Guinea Public Service. The balance of trainees undertook shorter courses in advanced administrative and executive development training, industrial relations and local government practice.

### Health

The Department of Public Health of Papua New Guinea has the general oversight of all medical and dental services. The Department has the following seven functional divisions: medical services, preventive medicine, medical training, maternal and child health, dental education, administrative services, and mental health. To facilitate administration and co-ordination of the field services of the Department of Public Health, Papua New Guinea is divided into four geographical regions: the New Guinea Mainland, Highlands, New Guinea Islands Region and Papua.

(a) Estimated. (b) Postal Revenue is retained by the Department of Posts and Telegraphs in accordance with the change to commercial accounting for that Department. (c) Refunds of revenue have been deducted from gross collections by items. (d) The Budget figure for General Loans and Special Appropriations is reduced by \$8.9 million as this amount was borrowed and repaid during the year. (e) As from 1970-71, the following additional amounts which were not part of the Papua New Guinea Budget, were provided by the Australian Government: for Australian Staffing Assistance (salaries and allowances) in 1970-71, \$31.5 million was provided; in 1971-72 \$38.3 million and in 1972-73 \$43.3 million. Also \$0.8 million was provided for Termination and Retirement Benefits, and \$1.1 million for Emergency Food Relief in the Highlands. In 1973-74, \$49.9 million will be provided by the Australian Government for Australian staffing assistance, and \$17.8 million for Termination and Retirement Benefits. (f) Abolished in 1972-73. (g) New Office established in 1972-73, formerly included in Department of the Administrator. (h) New Department established in 1972-73 which includes former sections of the Department of the Administrator. (i) New Department established in 1972-73 which includes former sections of the Department of Trade and Industry and the Department of the Administrator. (j) New department established in 1969-70; includes former sections of the Department of the Administrator, Department of the Treasury and the former Department of District Administration. (k) Abolished in 1969-70—functions taken over by the Department of the Administrator and the Department of Social Development and Home Affairs. (l) New Department established in 1971 from former sections of Departments of the Administrator, Treasury and Trade and Industry. (m) New Department established in 1970-71 which includes former sections of Department of Trade and Industry. (n) Amount reduced by taxation refunds and refunds of revenue.

### Taxation

The main forms of taxation are income tax and import duties. *Income Tax* was imposed on 1 August 1959 to operate from 1 July 1959. In the case of individuals two different methods of calculating tax payable are used. Tax on taxable incomes has applied since 1 July 1959 and is calculated on a similar basis to that in Australia. Income Tax is about two thirds of the tax payable on the same taxable income in Australia. Tax on chargeable income was introduced to apply from 1 January 1967 and has supplanted a previous *Personal Tax* of \$4 payable by all males eighteen years and over.

Chargeable income consists of gross income less expenses directly incurred in earning the income. No deductions are allowable for dependants or any other private expenditure such as medical or education expenses. The tax is a flat rate of 2.00 cents in the \$1 applying on income above \$416 with a maximum of \$20.00. The two methods of calculating tax payable are supplementary, the method applied to any particular taxpayer being the one resulting in the greater amount of tax payable. Companies are taxed on a similar basis to that in Australia, and deductions allowable are generally comparable to those in Australia. From 1 July 1959 to 30 June 1967 the rates on public and private companies differed, public companies being taxed at a flat rate of 20 cents in the \$1 and private companies at 12.5 cents in the \$1 for the first \$10,000 and 17.5 cents in the \$1 for the remainder. From 1 July 1971 a flat rate of 25 cents in the \$1 applies to all companies, and from the same date private companies are no longer required to distribute a portion of their income in dividends each year. As from 1 July 1972, companies paying a dividend to shareholders resident outside Papua New Guinea are required to deduct and pay a dividend withholding tax of 15 per cent. To encourage industry in Papua New Guinea certain companies manufacturing products new to Papua New Guinea may be granted complete tax exemption for the first five years of operation under the *Industrial Development (Incentive to Pioneer Industries) Ordinance 1965-1969*. This includes exemptions from the dividend withholding tax. In addition to income taxes the Native Local Government Councils (which are formed voluntarily by the indigenes) are empowered to levy local taxes for the purpose of providing for local services carried out by the councils. These taxes are set off against the taxpayers' personal taxation.

Papua New Guinea has a single column tariff applying to all goods regardless of country of origin. The present *Customs Tariff* provides high revenue rates on imports of ale, spirits, tobacco and cigarettes, timepieces, cigarette papers, fancy goods, and jewellery, but allows entry duty free or at a low rate of duty on most necessities affecting living and building costs. Under the Customs Tariff, plant, machinery and chemicals to be used mainly for industrial and developmental purposes are generally duty-free. A by-law covers goods imported by passengers. No preferential rates are specified in the schedule. Export duties imposed on copra, cocoa, rubber, mother-of-pearl, trochus and burgos shell, and gold were repealed in July 1959.

Provision is made in the *Australian Customs Tariff* for the free entry into Australia of certain goods produced in and imported direct from Papua New Guinea (see Chapter Overseas Transactions). In addition, goods produced or manufactured in Papua New Guinea and imported directly into Australia are exempted from primage duty.

Effective from 2 September 1970, a general levy of 2½ per cent was imposed, subject to certain exemptions on all goods imported into Papua New Guinea. Exemptions apply in the main to goods imported by the Administration and/or the Australian Government and their statutory authorities, goods imported for the use of charitable organisations and goods used for educational, health or medical services or for scientific research.

This levy, although administered by the Comptroller of Customs is not a Customs Duty and does not affect rates of duty imposed under the Customs Tariff.

### Banking

The banking system in Papua New Guinea is based on Australia's, and provides full trading and savings bank facilities. Four Australian trading banks have branches in the main centres. They are: the Commonwealth Trading Bank of Australia, the Bank of New South Wales, Australia and New Zealand Banking Group and the National Bank of Australasia Ltd. Affiliates or subsidiaries of banking institutions operate savings banks in the Territory. Rates of interest for bank deposits and advances are the same as those applying in Australia. A branch of the Reserve Bank of Australia in Port Moresby carries out central bank functions and acts as banker for the Administration and Commonwealth Government Departments in the Territory. The Territory uses the same currency as Australia.

The Banking (Foreign Exchange) Regulations of the Commonwealth of Australia apply to Papua New Guinea. All remittances abroad require exchange control approval, though in practice no restrictions are imposed on current transactions and the trading banks have been authorised to deal with the great majority of these transactions as agents of the Reserve Bank.

Average weekly deposits of cheque-paying banks in Papua New Guinea for the year 1971-72 were \$49,966,000 and loans, advances, including term loans and farm development loans, \$108,088,000. Average weekly debits to customers' accounts amounted to \$33,527,000. Savings banks depositors' balances at 30 June 1972 amounted to \$45,683,000, comprising indigenous \$19,085,000 and non-indigenous \$26,599,000 having increased since June 1961 from \$2,999,000 and \$9,663,000 respectively. Average weekly level of loans, advances, bills etc during 1971-72 were \$16,663,000.

The Papua New Guinea Development Bank was established in 1967 to provide finance for primary production, manufacturing and commerce. In early 1972 the Papua New Guinea Investment Corporation was established to acquire equity interests in major enterprises in Papua New Guinea for disposal to Papua New Guinea institutions and individuals.

#### Co-operative societies

Co-operatives are under the guidance of the Department of Business Development. The present structure of the co-operative movement is based on primary societies, associations of societies, regional unions and a Territory-wide Federation formed by the unions. At 31 March 1971 there were 340 primary societies with 139,000 members. Turnover exceeded \$7 million including \$5 million from produce. In addition there are service organisations for wholesale trade, insurance and shipping. A Co-operative College is being set up near Port Moresby with United Nations Development Programme and International Labour Organisation assistance. The first buildings were opened in May 1971.

### HEARD ISLAND AND McDONALD ISLANDS

These islands, about 2,500 miles south-west of Fremantle, were transferred from the United Kingdom to Australia as from 26 December 1947. The laws of the Australian Capital Territory were declared to be in force in the Territory of Heard Island and McDonald Islands by the *Heard and McDonald Islands Act* 1953. In 1968, the responsibility for the administration of this Act was transferred from the Minister for External Affairs to the Minister for Supply, and in 1972 the responsibility was transferred to the Minister for Science.

In December 1947 an Australian scientific station was established on Heard Island, and meteorological investigations were conducted until the station was closed in March 1955 following the establishment of Mawson station on the Antarctic mainland. Australian expeditions have since visited the island from time to time. Heard Island is about twenty-seven miles long and thirteen miles wide. The McDonald Islands are twenty-six miles to the west of Heard Island. They are small, rocky and precipitous. The first known landing on McDonald Island, the largest of the group of the same name, took place on 27 January 1971 when two members of the Australian National Antarctic Research Expeditions (ANARE) paid a short visit on their way to the Heard Island Station.

### AUSTRALIAN ANTARCTIC TERRITORY

An Imperial Order in Council of 7 February 1933 placed under Australian authority all the islands and territories other than Terre Adélie situated south of 60° S. latitude and lying between 160° E. longitude and 45° E. longitude. The Order came into force with a Proclamation issued by the Governor-General on 24 August 1936 after the passage of the *Australian Antarctic Territory Acceptance Act* 1933. The boundaries of Terre Adélie were definitively fixed by a French Decree of 1 April 1938 as the islands and territories south of 60° S. latitude lying between 136° E. longitude and 142° E. longitude. The *Australian Antarctic Territory Act* 1954 declared that the laws in force in the Australian Capital Territory, are so far as they are applicable and are not inconsistent with any ordinance made under the Act, in force in the Australian Antarctic Territory. In 1968, responsibility for the administration of this Act was transferred from the Minister for External Affairs to the Minister for Supply, and in 1972 the responsibility was transferred to the Minister for Science.

On 13 February 1954 the Australian National Antarctic Research Expeditions (ANARE) established a station on Mac-Robertson Land at latitude 67° 36' S. and longitude 62° 53' E. The Station was named Mawson in honour of the late Sir Douglas Mawson and was the first permanent Australian station to be set up on the Antarctic continent. Meteorological and other scientific research is conducted at Mawson, which is the centre for coastal and inland survey expeditions.

A second Australian scientific research station was established on the coast of Princess Elizabeth Land on 13 January 1957 at latitude 68° 35' S. and longitude 77° 58' E. The station was named in honour of Captain John King Davis, second in command of two of Mawson's expeditions and master of several famous Antarctic ships. The station was temporarily closed on 25 January 1965 and reopened on 15 February 1969. On 4 February 1959 the Australian Government accepted from the United States Government custody of Wilkes Station, which was established by the United States on 16 January 1957 on Vincennes Bay at latitude 66° 15' S. and longitude 110° 32' E. The station was named in honour of Lieutenant Charles Wilkes who commanded the 1838-42 United States expedition to the area. The station was closed on 19 February 1969 when activities were transferred to Casey Station built about 1½ miles south of Wilkes. Casey Station, which was opened on 19 February 1969, was named in honour of Baron Casey, former Governor-General of Australia, in recognition of his long association with Australia's Antarctic effort.

On 1 December 1959 Australia signed the Antarctic Treaty with Argentina, Belgium, Chile, France, Japan, New Zealand, Norway, South Africa, the U.S.S.R., the United Kingdom, and the United States of America, Poland, Czechoslovakia, Denmark, the Netherlands and Romania have subsequently acceded to the Treaty. The Treaty reserves the Antarctic area south of 60° S. latitude for peaceful purposes, provides for international co-operation in scientific investigation and research, and preserves, for the duration of the Treaty, the *status quo* with regard to territorial sovereignty, rights and claims. The Treaty entered into force on 23 June 1961. Since then the Antarctic Treaty powers have held seven consultative meetings under the Treaty, the first at Canberra in July 1961, the second at Buenos Aires in July 1962, the third at Brussels in June 1964, the fourth at Santiago in 1966, the fifth in Paris in 1968, the sixth in Tokyo 1970 and the seventh in Wellington in 1972.

## COCOS (KEELING) ISLANDS

### General description

The Cocos (Keeling) Islands, two separate atolls comprising some twenty-seven small coral islands with a total area of about  $5\frac{1}{2}$  square miles, are situated in the Indian Ocean in latitude 12° 05' S. and longitude 96° 53' E. They lie some 1,720 miles north-west of Perth and 2,290 miles almost due west of Darwin, while Johannesburg is some 3,800 miles further distant to the south-west and Colombo is 1,400 miles to the north-west of the group.

The main islands of the Territory are West Island, the largest, about six miles from north to south, on which are the aerodrome and most of the European community; Home Island, the headquarters of the Clunies-Ross Estate; Direction Island; South Island; and Horsburgh Island. North Keeling Island, which forms part of the Territory, lies about fifteen miles to the north of the groups and has no inhabitants.

Main settlements are on West Island and Home Island. The group of atolls is low-lying, flat and thickly covered by coconut palms, and surrounds a lagoon which has an anchorage in the northern part but which is extremely difficult for navigation.

The climate is equable and pleasant, usually being under the influence of the south-east trade winds for about three-quarters of the year. However, the winds vary at times, and meteorological reports from the Territory are particularly valuable for those engaged in forecasting for the eastern Indian Ocean. The temperature varies between 21°C and 32°C., and the average rainfall is about 2180 mm. There are occasional violent storms. The estimated population at 30 June 1972 was 637.

### History and administration

Summarised particulars of the discovery of the islands and their history up to 1946, when they became a dependency of the Colony of Singapore, are given in Year Book No. 51, page 140, and in earlier issues. On 23 November 1955 the Cocos Island ceased to form part of the Colony of Singapore and were placed under the authority of Australia. The transfer was effected by an Order in Council made by Her Majesty Queen Elizabeth the Second under the Imperial Act entitled the Cocos Islands Act 1955 and by the *Cocos (Keeling) Islands Act 1955* of the Australian Parliament whereby the islands were declared to be accepted by Australia as a Territory to be known as the Territory of Cocos (Keeling) Islands.

Responsibility for the administration of the Territory rests with the Minister for External Territories. The first Official Representative was appointed on 23 November 1955 to take charge of the local administration of the Territory. Under the *Official Representative Ordinance 1955-1961* of the Territory, the Official Representative is given such powers and functions in relation to the Territory as are delegated to him by the Minister under the *Cocos (Keeling) Islands Act 1955-1966* or are otherwise conferred on him under that Act or by or under any other law of the Territory. The laws of the Colony of Singapore which were in force in the islands immediately before the date of the transfer were, with certain exceptions, continued in force by the *Cocos (Keeling) Islands Act 1955-1966*. They may be amended or repealed by Ordinances made under the provisions of that Act which empower the Governor-General to make Ordinances for the peace, order and good government of the Territory.

### Transport and communication

There is an international airport at West Island under the control of the Commonwealth Department of Civil Aviation. A fortnightly air service is provided between Perth and the Cocos Islands by Ansett and T.A.A. alternately. Although there is no regular shipping service, vessels from Australia and Singapore call at intervals. A radio teletype link with Perth is maintained by the Administration. Local postal and telephone services exist, and a non-commercial broadcasting station operates.

## CHRISTMAS ISLAND

Christmas Island is an isolated peak situated in the Indian Ocean in latitude 10° 25' 22" S., longitude 105° 39' 59" E. It is approximately 224 miles south from Java Head at the south entrance to Sunda Strait, 815 miles from Singapore and 1,630 miles from Fremantle. Christmas Island covers an area of about fifty-two square miles. It consists of a central plateau of about 600 to 800 feet with several prominent rises up to 1,170 feet. The plateau descends to the sea in a series of steep slopes alternating with terraces, the last dropping in a cliff of 200 to 300 feet to a shore terrace, terminating in a sea cliff of 10 to 150 feet, which is continuous round the island except in a few places, the chief of which is Flying Fish Cove, where the principal settlement is located and which is also the only known anchorage.

The climate is pleasant, and the prevailing winds come from the south-east to east-south-east from May to December, but from then to April (the wet season) they occasionally shift round to between north and west. The average yearly rainfall is about 64 inches with a marked summer incidence. The porous nature of the ground prevents the formation of pools of water, but there are several good springs which maintain an adequate supply of fresh water for the small population and the installations. The mean average temperature is about 27°C., and does not vary greatly throughout the year.

The economy of the Territory is based almost entirely on the mining and extraction of phosphate. Because of the nature of the land there appears little prospect of establishing any other economic activity.

At 30 June 1972 the estimated population was 2,741 (1,825 males and 916 females).

### Education

The Christmas Island education system comprises a primary school and a secondary school following the Singapore curriculum, a primary school following an Australian curriculum and a technical training centre. The Singapore curriculum schools provide classes to Form 4 level and scholarships are available for students wishing to proceed to Singapore or Australia for education beyond that level.

At 30 June 1972, 712 children were enrolled at the primary and secondary schools following the Singapore curriculum. The combined staff establishment consisted of a headmaster, two senior teachers, 28 trained teachers and 2 assistant teachers. The Australian curriculum primary school had 67 pupils at 30 June 1972, with teachers seconded from the Western Australian Department of Education. There is also a Technical Training Centre, which opened in 1969.

### History and administration

Summarised particulars of the history of Christmas Island up to its administration by the United Kingdom as a separate Crown Colony from 1 January 1958, pending transfer to Australia, are given in Year Book No. 51, page 141, and in earlier issues. On 1 October 1958 the island was transferred to Australia by the *Christmas Island Act 1958*. Responsibility for the administration and government of the Territory rests with the Minister for External Territories, and day to day affairs on the island are administered by an Administrator under delegation from the Minister. The laws which were in force on the island at 30 September 1958 were continued as the laws of the Territory after its transfer to Australia. They may be amended or repealed by Ordinances or by laws made under Ordinances of the Territory.

### Phosphate deposits

The only commercial activity carried out is the mining of phosphate. The British Phosphate Commissioners act as managing agents for the Christmas Island Phosphate Commission. Phosphate is mined at several locations on the Island. During 1971-72, 767,350 tons of phosphate were exported to Australia and New Zealand. In addition 154,890 tons of phosphate dust were exported to South-East Asia and 2,822 tons went to Australia.

### Transport and communication

Transport to and from the island is maintained by vessels operated under charter by the Christmas Island Phosphate Commission. One vessel makes regular trips between Christmas Island and Singapore, and other vessels carry phosphate to Australian ports and New Zealand.

A post office is staffed and operated by the Administration. The British Phosphate Commissioners operate an internal telephone system which comprises five automatic exchanges and three small subscriber-attended exchanges. A radio station is used for messages via Perth and Singapore and for communication with ships at sea. A limited broadcasting station commenced operating during 1966-67.

**CORAL SEA ISLANDS**

The Coral Sea Islands were declared to be a Territory of the Commonwealth by the *Coral Sea Islands Act* 1969. The scattered reefs and islands, often little more than sandbanks, spread over a sea area of 400,000 square miles with only a few square miles of actual land area, between the Great Barrier Reef, latitude 12°S and longitude 157° 10' E. The Territory which is administered by the Minister for the Capital Territory, has no permanent inhabitants. There is a manned weather station on Willis Island, some 300 miles east of Cairns and a number of unmanned facilities are operated by the Commonwealth Government.

## CHAPTER 29

### MISCELLANEOUS

This chapter comprises statistics and other descriptive information not directly related to the subjects of the preceding chapters, or which it is convenient to assemble in single sections, arranged as follows: Value of Australian primary production; Indexes of farm production; Consumption of food-stuffs and beverages; Internal trade (retail and wholesale trade); Interstate trade; Statistical organisation in Australia; Statistical and other official publications of Australia; Metric conversion for Australia.

#### VALUE OF AUSTRALIAN PRIMARY PRODUCTION

The figures published in the following tables have been compiled by the Statisticians in the various States from the latest and best data available and are on a substantially uniform basis. However, marketing costs are not on a completely comparable basis between States and, in addition, accurate information is difficult to obtain for many items. In consequence, differences between States in the relationships of local to gross value should be treated with some reserve.

##### Explanation of terms used

The following is a brief explanation of the terms used.

- (a) *Gross value of production* is the value placed on recorded production at the wholesale price realised at the principal markets. In general, the 'principal markets' are the metropolitan markets in each State. In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are presumed to be the principal markets.
- (b) *Local value* (i.e. gross production valued at the place of production) is ascertained by deducting marketing costs from the gross value. Marketing costs include freight, cost of containers, commission, and other charges incidental thereto.
- (c) *Net value of production* represents local value less value of materials used in the process of production. Materials used in the process of production include seed, power, power kerosene, petrol and other oils, fodder consumed by farm stock, manures, dips, sprays, and other costs. No deductions have been made for depreciation or certain maintenance costs, as particulars are not available for all States. The net value of production is the only satisfactory measure to use when comparing or combining the value of primary industries with those of other industries.

For the years shown in the following tables, no allowance for power, power kerosene, petrol, and other oils has been made in New South Wales. Costs of materials used in the process of production in respect of bee-farming, hunting, forestry, and fishing are not available for all States (except for fishing in New South Wales and Western Australia commencing in 1971-72); local values have been used for these industries. Because of revisions, some figures may differ from corresponding figures in earlier chapters of this Year Book.

## Value of primary production, Australia

**GROSS, LOCAL AND NET VALUE OF PRODUCTION OF PRIMARY INDUSTRIES (EXCLUDING MINING): AUSTRALIA 1971-72**  
(\$'000)

<i>Industry</i>	<i>Gross production valued at principal markets</i>	<i>Local value—gross production valued at place of production</i>	<i>Net value of production (without deduction of depreciation or maintenance)</i>
Crops . . . . .	1,606,815	1,352,074	1,157,426
Pastoral . . . . .	1,564,456	1,417,514	1,210,349

**INDEXES OF FARM PRODUCTION**

In the first two tables in this section indexes of price and quantum (i.e. value at constant prices) of production are given for the following industrial groups: Crops, Pastoral, Dairying, Poultry and Bee-farming, and All farming combined. Separate indexes are shown for wheat, wool and milk. In the third table indexes of quantum (i.e. value at constant prices) of production, exports and consumption of farm products for food use are shown.

**Farm production price indexes**

The farm production price indexes shown in the following table relate to average 'prices' of crops, pastoral, dairying, poultry and bee-farming products realised at the principal markets of Australia. The 'price' data used are average unit values for the total quantities of the relevant commodities produced or marketed in each year, and the index numbers therefore measure both the effects of changes in prices (as such) and of variations in the quality, type, usage, etc. of products marketed. The index numbers for any year relate to the average values of products produced or marketed in that year irrespective of the periods in which payment is received by producers.

The indexes have been calculated by the fixed-base weighted aggregative method. 'Prices' for each commodity in any year are obtained by dividing gross value of production by the quantity produced in that year. In the original published series of Production Price Index Numbers the average quantities of the relevant commodities *produced* in the period 1923-24 to 1927-28 were used as fixed weights. This series, re-computed to the base: average 1936-37 to 1938-39 = 100, was published in earlier issues of the Year Book (*see* No. 43, page 1050). For 1936-37 and later years the original series was replaced in December 1952 by a revised series in which average quantities of each product *marketed* during the period 1946-47 to 1950-51 were used as fixed weights. In the revised series the regimen was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were also incorporated in the revised indexes, the principal of which was the omission from the weights used for the All farming index of quantities of crops marketed for livestock feeding in Australia.

**FARM PRODUCTION: INDEXES OF PRICES AT PRINCIPAL MARKETS, AUSTRALIA  
1956-57 TO 1970-71**

(Base: Average of 3 years ended June 1939 = 100)

Year	Crops		Pastoral		Dairying, poultry and bee-farming		All farming	
	Wheat	Total	Wool (shorn and dead)	Total	All milk	Total	Products other than wool	Total
1956-57	347	336	607	536	365	386	374	432
1957-58	339	336	473	435	375	382	359	388
1958-59	337	322	370	396	372	386	369	369
1959-60	350	329	440	464	383	402	391	403
1960-61	355	349	397	443	384	402	403	401
1961-62	380	348	412	421	373	373	376	385
1962-63	366	334	449	450	380	388	378	396
1963-64	356	351	531	511	382	402	398	431
1964-65	351	351	437	460	403	423	408	415

1966-67	366	350	433	496	388	418	425	427
1967-68	397	371	382	457	380	413	429	417
1968-69	337	334	408	488	391	424	424	420
1969-70	359	348	343	451	393	427	434	411
1970-71	354	358	268	395	420	439	438	396

**Indexes of quantum (i.e. value at constant prices) of farm production**

The indexes shown in the following table relate to gross output of farm products valued at constant prices. They have been calculated by revaluing quantities of each farm product included in the indexes at the average unit gross value of each product for the base years.

In the original published series the period 1923-24 to 1927-28 was adopted as the base for revaluing each farm product. This series, re-computed to the base: average 1936-37 to 1938-39 = 100, was published in earlier issues of the Year Book (*see* No. 43, page 1051). For 1936-37 and later years the original series was replaced in December 1952 by a revised series in which average unit values for the period 1936-37 to 1938-39 were used. The regimen used for the revised series was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were incorporated in the revised indexes, the principal of which was the omission, in calculating the All farming index, of quantities of crops fed to livestock in Australia.

**INDEXES OF QUANTUM<sup>(a)</sup> OF FARM PRODUCTION: AUSTRALIA  
1956-57 TO 1970-71**

*(Base: Average of 3 years ended June 1939 = 100)*

1970-71	176	239	198	201	140	154	203	202

<sup>(a)</sup> Indexes of value at constant prices, i.e. quantities revalued at average unit values of the base years (see text preceding table).

**Farm products for food use: indexes of quantum (i.e. value at constant prices)  
of production, exports and consumption**

The indexes shown in the following table have been calculated by revaluing quantities of each farm product included in the indexes at the average unit gross value of each product for the years 1936-37 to 1938-39. The items included comprise products in the form in which they are sold from farms in all cases except livestock sold for slaughter for meat, which are included in terms of dressed carcass weight of meat. Quantity data relating to exports include exports of processed food in terms of farm product equivalent. The indexes of production relate basically to gross output of farm products for food use, including crops exported for stock-feeding overseas.

**FARM PRODUCTS FOR FOOD USE: INDEXES OF QUANTUM<sup>(a)</sup> OF  
PRODUCTION, EXPORTS AND CONSUMPTION  
AUSTRALIA, 1956-57 TO 1970-71**

*(Base: average of 3 years ended June 1939 = 100)*

Year	Production		Exports		Consumption in Australia	
	Total	Per head of total population	Total	Per head of total population	Total	Per head of total population
1956-57	123	88	118	85	136	98
1957-58	115	81	90	64	139	98
1958-59	146	101	137	94	142	98

<sup>(a)</sup> Indexes of value at constant prices, i.e. quantities revalued at average unit values for the base years (see text preceding table).

## CONSUMPTION OF FOODSTUFFS AND BEVERAGES

### Quantities consumed

The estimates of total consumption and consumption per head of population in Australia in the two tables which follow have been compiled by deducting net exports from the sum of production and imports and allowing for recorded movements in stocks of the respective commodities. While the estimates may be generally accepted as being reasonably accurate, there are some deficiencies to which attention should be directed. These relate chiefly to the quantities of fish, rabbits and hares and the quantities of certain oils and fats entering consumption. In addition, little information is available on the quantities of vegetables, fruit, eggs, etc. which householders produce for their own requirements and the extent of wastage occurring in the marketing of foodstuffs. In all these cases careful estimates have been compiled from the best available data, and the quantities shown as entering consumption in Australia have been adjusted to allow for these circumstances. The absence of particulars for stocks of certain commodities has resulted in some inaccuracies in the estimates of annual consumption. Consumption of foodstuffs is measured in general at 'producer' level. As a result, no allowance is made for wastage before the foodstuffs are consumed. In recent years wastage of foodstuffs has possibly been less than previously because of more efficient distribution and storage methods. Furthermore, it is likely that the quantities of foodstuffs shown in the following pages as available for consumption have been supplemented by production by householders for their own requirements. In most cases broad estimates of non-commercial (householders') production have been made. Except in a few special cases, no adjustment has been made for changes in stocks held by wholesalers and retailers. Where no allowance is made it is considered unlikely that these stocks would make any appreciable difference to consumption estimates. It is felt that the foregoing deficiencies do not seriously impair the accuracy of the estimates compiled.

The estimates of consumption per head of population shown in the second of the following tables have been derived by dividing the total apparent consumption of each commodity or commodity group in a given year by the mean population of Australia in the same period.

More detailed information on the consumption of foodstuffs and beverages is contained in the statistical bulletin: *Apparent Consumption of Foodstuffs and Nutrients* (10.10), issued by this Bureau.

The following tables show the average annual consumption during the three-year periods ended 1938-39, 1948-49 and 1958-59, together with the data for each of the years 1969-70, 1970-71 and 1971-72. Because of revisions, figures for some items in the following tables may differ from corresponding figures in earlier chapters of this Year Book.

### ESTIMATED QUANTITY OF FOODSTUFFS AND BEVERAGES AVAILABLE FOR CONSUMPTION ANNUALLY: AUSTRALIA, 1936-37 TO 1971-72

(a) Includes an allowance for edible starch (cornflour). (b) Includes fresh equivalent of manufactured products. (c) Probably understated owing to lack of complete data. (d) Not comparable with data prior to 1960-61, in which year the average weight of an egg was altered in calculations from 1.75 oz to 2 oz. (e) Includes ice cream mixes. (f) Includes buttermilk and mixed skim and buttermilk. (g) Coffee and coffee products in terms of processed whole or ground pure coffee.

### Level of nutrient intake

The next table shows details of the estimated supplies of nutrients available for consumption in Australia during the years 1969-70 to 1971-72 in comparison with the annual averages for the three-year periods ended 1938-39, 1948-49 and 1958-59. The table has been compiled by the Nutrition Section of the Commonwealth Department of Health and is based on the estimates of the quantity of foodstuffs available for consumption per head of population shown in the preceding table.

**ESTIMATED SUPPLY OF NUTRIENTS AVAILABLE FOR CONSUMPTION  
AUSTRALIA, 1936-37 TO 1971-72  
(Per head per day)**

Nutrient		Average three years ended—			1969-70 (a)	1970-71 (a)	1971-72p (a)
		1938-39	1948-49	1958-59

(a) Not comparable with previous years. Figures are based on conversion factors calculated from the revised and enlarged edition of 'Tables of Composition of Australian Foods'. (b) Micrograms.

NOTE. One international unit of vitamin A activity is equivalent to 0.3 micrograms of retinol.

## INTERNAL TRADE

Extensive statistics of retail trade have been collected and published over many years. The first full census of wholesale trade, however, was conducted as part of the integrated economic censuses of 1968-69, outlined briefly below. For a detailed description of these censuses, reference should be made to Year Book No. 56, 1970, Chapter 31.

**Economic Censuses, 1968-69**

For the year ended 30 June 1969 the censuses of Wholesale Trade, and of Retail Trade and Selected Services, were conducted for the first time on an integrated basis with censuses of Mining, Manufacturing, and Electricity and Gas Production and Distribution. The integration of these economic censuses was designed to increase substantially the usefulness and comparability of the kinds of statistics already being collected and published by the Bureau and to form a basis for the sample surveys which supply current economic statistics from quarter to quarter, particularly those which provide data for the quarterly national income and expenditure estimates.

The integration of these economic censuses meant that for the first time they were being collected on the basis of a common framework of reporting units and data concepts and in accordance with a standard industrial classification. As a result, the statistics for the industries covered by the censuses are now provided with no overlapping or gaps in scope, and in such a way that aggregates for certain important economic data such as value added, employment, salaries and wages, fixed capital expenditure and stocks can be obtained on a consistent basis for all sectors of the economy covered by the censuses.

The standardisation of census units in the integration of economic censuses means that the basic census unit (the establishment) in general now covers all the operations carried on under the one ownership at a single physical location. The retail establishment is thus one predominantly engaged in retailing, and the wholesale establishment one predominantly engaged in wholesaling, but the data supplied for them now cover, with a few exceptions, all activities at the location.

Establishment statistics, other than the number of establishments, also include data relating to separately located administrative offices and ancillary units serving the establishment and forming part of the business (enterprise) which owns and operates the establishment. These units, such as head offices, storage premises, transport depots and motor vehicle repair and maintenance workshops, were formerly excluded from censuses.

The summary tables shown in this section include final figures from the 1968-69 censuses of wholesale and retail trade. Further and more detailed statistics are included in separate bulletins published by the Central and State offices of this Bureau.

**Wholesale trade.** The term wholesale trade is used in the wholesale census in the broad sense to include the resale (by agents or principals) of new or used goods to retailers or other wholesalers or to institutional (including government), professional or other business users (including farmers and builders). The more important types of business engaged in wholesale trade are wholesale merchants, who take title to the goods they sell; manufacturers' sales branches; commission agents, including import and export agents and purchasing agents; petroleum products distributors; and co-operative and marketing boards engaged in marketing farm products.

Each establishment in the integrated censuses is identified in terms of a particular location and all sales, employment, etc., are recorded for that location, regardless of the size of the sales territory covered, i.e. the location of customers. For this reason, all of the sales, etc., of the wholesale establishments located in the State of Victoria, for example, are credited to Victoria even though the sales territories may extend over several States.

In the tables which follow, wholesale establishments have been classified by type of operation according to the nature of the functions performed and by industry according to the Australian Standard Industrial Classification. The basis of the broad type of operation classification is the description of 'type of operation' reported by businesses for each individual wholesale establishment.

**WHOLESALE ESTABLISHMENTS: SUMMARY OF OPERATIONS  
BY BROAD TYPE OF OPERATION: AUSTRALIA, 1968-69**

Broad type of operation	Number of establishments at 30 June 1969	Persons employed (a)	Wages and salaries	Turnover	Stocks at 30 June		Purchases, transfers in and selected expenses	Value added (b)	Total wholesale sales

(a) At end of June 1969; includes working proprietors. (b) Sales on own account, transfers out and other operating revenue plus increase (or less decrease) in the value of stocks, less purchases, transfers in and selected expenses.

**Retail trade.** The definition of 'retail trade' adopted in the 1968-69 Retail Census is the same as the definition used in previous retail censuses, i.e. the resale of new and used goods to final consumers for personal and household consumption. The basis on which previous censuses of retail establishments were conducted was described in detail in Year Book No. 56, 1970 (page 1022).

Previous censuses of retail establishments included a number of activities that were also covered by the annual manufacturing census: principally motor vehicle repairs, dry cleaning, shoe repairs and tyre retreading. Takings from these activities were reported in the retail trade census but not included in 'retail sales'. The following activities were also included in previous retail censuses if they were carried on in establishments which had retail sales of more than \$1,000: custom dress-making and custom tailoring, clothing repair and alterations, making up and repair of blinds, awnings and curtains, repairs of domestic appliances, panel beating and smash repairs, watch and clock repairs, jewellery repairs, and baking of cakes in cake shops. These activities were also covered by the annual manufacturing census. With the adoption of the new establishment concept in the 1968-69 economic censuses, no establishment was required to supply returns in more than one census and all establishments mainly engaged in the above activities are now included in the retail trade census only.

Censuses of retail trade in Australia have traditionally included certain types of service establishments in their scope, in addition to retail establishments more narrowly defined. Some of the service establishments so included make retail sales in appreciable volume as well as providing important services for which the statistics can be conveniently collected in the framework of the retail census.

The census of retail trade for 1968-69 included the following types of service establishments in its scope in addition to establishments classified to Retail Trade: motion picture theatres; cafes and restaurants; licensed hotels, motels and wine saloons; licensed clubs; laundry and dry cleaning services; and hairdressing and beauty salons. Of these service industries, cafes and restaurants, licensed hotels, motels and wine saloons and hairdressing and beauty salons had been included in previous censuses as retail establishments, while the remainder were included in the supplementary collections made from establishments not described as retail establishments.

Some changes in the scope of the retail census have been made for reasons not connected with the introduction of a standard industrial classification; for example bread vending and milk vending by independent vendors mainly engaged in retailing bread or milk by home delivery service are included for the first time.

Because of the changes which have occurred in the definition of census units, the scope of the census and the items of data collected, it is not possible to make direct comparisons between the figures obtained from the 1968-69 Retail Census and those obtained from previous retail censuses or from the monthly and quarterly retail surveys based on previous retail censuses. For further information concerning such changes and their effects on comparisons with other statistics of retail trade, reference should be made to Year Book No. 56, 1970, Chapter 31, and to *Economic Censuses, 1968-69: Retail Establishments and Selected Service Establishments—Final Bulletins*.

### RETAIL ESTABLISHMENTS AND SELECTED SERVICE ESTABLISHMENTS: SUMMARY OF OPERATIONS, BY INDUSTRY CLASS, AUSTRALIA, 1968-69

Industry class	Number of establishments at 30 June 1969	Persons employed (a)	Wages and salaries (b)	Turnover (b)	Stocks at 30 June		Purchases, transfers in and selected expenses (b)	Value added (b)(c)	Retail sales (b)

(a) At end of June; including working proprietors and unpaid helpers working at least 15 hours during the week.  
 (b) Figures relate to all establishments which operated during the year. (c) Turnover plus increase (or less decrease) in the value of stocks, less purchases, transfers in and selected expenses. (d) Excludes motion picture theatres. (e) Includes Northern Territory and Australian Capital Territory motion picture theatres.

**Value of retail sales in each commodity group, Australia, based on  
1968-69 Census of Retail Establishments**

The following table shows the value of retail sales of goods in each of the commodity groups specified in the years 1968-69, 1971-72 and 1972-73, on a comparable basis throughout. The figures for the year 1968-69 were obtained from the 1968-69 census and figures for the other years shown are estimates based on sample surveys, on a basis comparable with the 1968-69 census.

**VALUE OF RETAIL SALES: COMMODITY GROUPS, AUSTRALIA(a)  
1968-69, 1971-72 AND 1972-73  
(\$ million)**

<i>Commodity group</i>	<i>1968-69(b)</i>	<i>1971-72</i>	<i>1972-73</i>

## INTERSTATE TRADE

Prior to the federation of the Australian Colonies (now States) each Colony published statistics of its trade with the other Colonies. A similar record was continued by the Commonwealth Government under the provisions of the Constitution (section 93). On the expiry of the 'bookkeeping' period these records were discontinued as from 13 September 1910, and the last published statements were for the year 1909. Later, the Governments of Western Australia and Tasmania revived the records, and relevant statistics are available again for those States. A detailed collection for Queensland was re-introduced from July 1953.

At the Conference of Statisticians held in January 1928 it was resolved that efforts should be made in other States to record the interstate movement of certain principal commodities. Complete interstate trade statistics are now published in detail for Queensland, Western Australia and Tasmania by the Deputy Commonwealth Statisticians in those States, and incomplete statistics, relating mainly to trade with Western Australia and Tasmania, by the Deputy Commonwealth Statisticians in the remaining States.

## STATISTICAL ORGANISATION IN AUSTRALIA

### Early development of Australian statistics

Statistical organisation in Australia has its origin in the 'Blue Books' which, in the Crown Colony days, were prepared annually for the information of the Colonial Office. Although intended primarily for administrative purposes, these documents were important sources of statistical data, and formed the basis from which later statistical publications were developed. Following the advent of responsible government, the 'Blue Book' was succeeded in all States by 'Statistical Registers' which, however, were still largely summaries of the 'by-product' statistics of government administrative departments.

The growing need for quantitative data concerning the progress of the several young communities of Australia led eventually to the appointment of official Statisticians commissioned to prepare and publish such data. Conferences were held between the Statisticians to allow for the interchange of ideas between States and to provide for uniform State statistics which could be aggregated to Australian totals. Altogether, six conferences were held prior to the formation of the Commonwealth Bureau of Census and Statistics in 1906—in 1861, 1875, 1890, 1900, 1902 and 1903. The holding of these conferences has been continued since the formation of the Commonwealth Bureau, and a representative from New Zealand attended up to 1928.

### Creation of the Commonwealth Bureau of Census and Statistics

Under the provisions of Section 51 of the Commonwealth Constitution, power is conferred on the Commonwealth Parliament 'to make laws for the peace, order, and good government of the Commonwealth with respect to . . .' (*inter alia*) '(XI.) Census and Statistics'. Accordingly the *Census and Statistics Act* 1905 was passed, and in 1906 the Commonwealth Bureau of Census and Statistics was created. A conference of Statisticians in 1906 defined the relations between the Commonwealth and State Bureaux, and in each case the State Statistician became the representative in his own State of the Commonwealth Statistician for the purpose of administering the Commonwealth Act. In addition, each State had its own 'Statistics Act', and although these were not identical for all States, they embodied common principles. The Commonwealth Bureau did not attempt to duplicate the existing State statistical organisations, but endeavoured to use their services whenever possible, undertaking the initial collection of statistics only in fields not covered by the States, or in which efficiency demanded complete centralisation.

### Integration of statistical services

The creation and development of the Commonwealth Bureau of Census and Statistics, the frequent conferences of Commonwealth and State Statisticians, and the close and increasing liaison between officers dealing with the same subjects in the State and Commonwealth fields did much to promote uniformity in official statistics and methods employed in their collection throughout Australia. The complete realisation of this aim could not, however, be achieved with seven separate statistical systems, even with the utmost co-operation of those concerned. This became apparent when economic problems following the 1914-18 War drew attention to deficiencies in Australian statistical data.

The first step towards integration was taken in 1924, when, in response to a proposal by the Prime Minister to the Premiers' Conference that State and Commonwealth Statistical Bureaux be amalgamated, the Tasmanian office was transferred to the Commonwealth. (Other States did not agree to the proposal at that time.) The Tasmanian office has since functioned as a Commonwealth office which also serves State statistical needs.

The varied economic and social problems of the 1920's and 1930's, the 1939-45 War and the post-war boom, and the development during and since the war of a volume of new statistics, imposed a severe strain on the statistical systems and increased the complexities of the several administrations in their efforts to secure and maintain uniformity in statistical collections.

The difficulties of maintaining efficient statistical services were further emphasised during the immediate post-war years when the problems of planning for post-war reconstruction greatly increased the demand for current economic statistics. In 1949, discussions with the Premiers were initiated by the Prime Minister, with the object of integrating the statistical services of the Commonwealth and the States. Following negotiations, all State Governments accepted the terms of draft agreements to integrate their respective statistical offices with that of the Commonwealth, and effect was given to this by the *Statistics (Arrangements with States) Act 1956*. This legislation, permissive in nature, was designed to enable the Commonwealth to enter into an agreement with any State to effect an amalgamation of Commonwealth and State statistical offices and services. The object of such an agreement was to establish an integrated statistical service, with branches in each State, operated by Commonwealth statistical officers under the immediate direction of a Deputy Commonwealth Statistician who would hold office under both the Commonwealth and State Governments. Both Commonwealth and State were to be adequately served with statistics, and no State would be required to surrender its existing powers in the field of statistics. Integration of the Commonwealth and State statistical services was finally accomplished when the integration arrangement with Victoria came into effect on 15 September 1958.

The relationships which at present exist between the Bureau and the several State Governments are a reflection of these agreements. Each State has retained its power to collect statistics under State laws, but the Commonwealth provides the staff and the funds, and is responsible for all statistical work required by both Commonwealth and State Governments. Conferences of the Commonwealth and Deputy Commonwealth Statisticians are held annually to discuss current and projected future operations of the Bureau.

Under the system as it now operates, Deputy Commonwealth Statisticians and their staffs provide the principal avenue of contact between State Government agencies and other State users and suppliers of statistical information. For the most part, negotiations with Commonwealth agencies and other national users and suppliers of statistical information are undertaken by the Commonwealth Statistician and his Central Office staff. However, the division of responsibility between the Bureau's Central and State Offices in the matter of relationships with users and suppliers of statistical information is by no means as precise as might be assumed from the above remarks. The statistical services are highly integrated and operate as one unit rather than as seven separate Bureaux. In general, it might be said that moves to develop new statistical series or to modify existing ones for State purposes are normally initiated by Deputy Statisticians, whereas moves to develop new or modified series for national socio-economic policy purposes are usually initiated by the Commonwealth Statistician.

### Scope of the Commonwealth Bureau of Census and Statistics

The scope of the Commonwealth Bureau of Census and Statistics has continually been widened. Additional requirements in the administrative, industrial, financial and scientific spheres have led to the development of many new statistical collections. All these activities are covered by the Census and Statistics Act, which empowers the Statistician to collect information and contains stringent provisions to ensure that the secrecy of information provided by individual persons and businesses is preserved.

In the Australian centralised official statistical service, it is recognised that there is a danger that official statisticians may become isolated from the thinking of the users of statistics and insensitive to the problems of the firms or individual persons whose responsibility it is to supply statistical information. The dangers inherent in this situation are for the most part obviated by the six State Offices of the Bureau keeping in very close contact with the individual businesses which use statistics and supply statistical information, and special steps are taken to ensure that users have adequate scope for expression of their needs and that requests by the Bureau for information are kept within reasonable and practical limits. The methods towards this end which have been adopted in the Bureau are reflected in its organisational structure. The organisation is on the basis of specialist subject-matter branches, and to each relatively narrow field of socio-economic activity there is a corresponding branch within the Bureau which is responsible for obtaining statistics and providing statistical services. Thus, in the Central Office, there are specialist branches dealing with primary industries; secondary industries; internal trade; employment; finance; population and vital statistics, etc. A broadly similar organisational pattern exists in State Offices of the Bureau, although local requirements have naturally given rise to differences in detail.

### Organisation of the Central Office of the Commonwealth Bureau of Census and Statistics

The Central Office of the Bureau is organised functionally into the following divisions, listed alphabetically. As shown below, these divisions are further sub-divided into specialist subject matter branches.

*Demography, Social and Manpower Division.* Demography and Social; Employment and Labour; Population Census.

*Development and Co-ordination Division.* Co-ordination; Sampling, Special Surveys and Consultation; Statistical Standards and Methodology.

*Economic Accounts Division.* National Accounts and Public Finance; Prices, Quantum and Household Expenditure.

*Economic Censuses and Surveys Division.* Internal Trade, Service Industries and Transport; Rural, Construction and Private Finance; Secondary Production, Classification and Integration.

*Overseas Transactions Division.* Foreign Investment; International Accounts and Trade.

In addition to the above-mentioned divisions and a *Management Services* branch, the Bureau has a *Computer Service Centre* which operates the largest computer network in Australia and one of the largest used for statistical purposes in the world. It comprises a Control Data 3600, 3500 and two 3300 computers in Canberra; 3300, 3200 and 160A computers in Sydney and Melbourne; 3200 and 160A computers in Adelaide and Brisbane; and 3200 computers in the remaining State capitals. All installations use a full complement of peripheral devices. Mass storage and interrogation facilities are available at Canberra, Sydney and Melbourne.

At 30 June 1973 the staff of the Bureau numbered 3,372, of whom 694 were university graduates. Of the total staff, 1,436 were employed in the Bureau's Central Office in Canberra. Expenditure for 1972-73 amounted to \$26,300,000.

### Relation of the Bureau to other Commonwealth Departments

The Commonwealth Statistician is the co-ordinating authority on all statistical activities in Commonwealth Departments, and where any new statistical field is to be established involving the regular collection of statistics, the Commonwealth Statistician must be consulted to ensure that they are necessary, that they are based on sound statistical methods and that their needs are being met by the most economical means and without duplication of effort.

The Bureau provides methodological and general statistical advice to Commonwealth Departments and instrumentalities from time to time as required. However, for some Departments, which have a continuing need for specialised statistical services, the Bureau provides, from its own staff, the key personnel to serve these needs.

## STATISTICAL AND OTHER OFFICIAL PUBLICATIONS OF AUSTRALIA

The official statistical publications of Australia may be divided bibliographically into two main divisions, namely: (i) Commonwealth publications dealing both individually and collectively with the several States of Australia; and (ii) State publications dealing with individual States only. Commonwealth publications containing statistics may be grouped under two heads, namely: (i) publications issued by the Commonwealth Statistician; and (ii) Parliamentary and Departmental Reports and Papers. State publications may similarly be grouped into publications issued by the Deputy Commonwealth Statistician in each State, and State Parliamentary and Departmental Reports and Papers. The statistics contained in the second group in each case are in the main incidental to the primary purpose of the particular report or paper.

### Publications issued by the Commonwealth Statistician

#### Principal statistical publications issued to date

The following is a list of the principal statistical publications issued from the Central Office of the Commonwealth Bureau of Census and Statistics since its inauguration. Minor changes in titles have not been referred to. Copies of a number of these publications, particularly earlier issues, are not now available.

*Australian Capital Territory Statistical Summary.* Annually, 1963 to 1973.

*Balance of Payments.* Half-yearly, 1946-47 to 1971-72; annually, 1972-73.

*Balance of Payments, Australia.* Statements Nos 1 to 3, 1928-29 to 1951-52.

*Banking and Currency.* Bulletin, annually, 1961-62 and 1962-63 (combined issue) to 1971-72.

† *Building and Construction.* Bulletin, annually, 1964-65 to 1970-71.

*Causes of Death.* Bulletin, annually, 1963 to 1969 and 1971 (combined issue).

- Census (1911) Results.* Bulletin. Vols I (Statistician's Report), II and III, with Appendix *Mathematical Theory of Population*.
- Census (1921) Results.* Bulletins, Nos 1 to 26. Parts I to XVI, forming Vol. I, and Parts XVII to XXIX (Part XXVII, Life Tables), forming, with the Statistician's Report, Vol. II.
- Census (1933) Results.* Bulletins, Nos 1 to 25. Parts I to XIV, forming Vol. I, Parts XV to XXVIII, forming Vol. II, and Parts XXIX to XXXVII, forming, with the Statistician's Report and Australian Life Tables, 1932-1934, Vol. III.
- Census (1947) Results.* Bulletins, Nos 1 to 25. Parts I to XVI, forming Vol. I, Parts XVII to XIX, forming Vol. II, and Parts XX to XXVIII, forming, with the Statistician's Report and Australian Life Tables, 1946-1948, Vol. III.
- Census (1954) Results.* Bulletins, Nos 1 to 3. Vols I to VI, comprising respectively Parts I to V for each State; Vol. VII, comprising Parts I to V for the Australian Territories; Vol. VIII, comprising Parts I to III for Australia. Australian Life Tables, 1953-1955, and the Statistician's Report.
- Census (1961) Results.* Vols I to VI, comprising respectively Parts I to V for each State; Vol. VII, comprising Parts I to V for the Australian Territories; and Vol. VIII, comprising Parts I to III for Australia, Australian Life Tables, 1960-1962, and the Statistician's Report.
- Census (1966) Results.* Summarised results for each State and Territory and for Australia have been published in a series of mimeographed bulletins available from the Commonwealth Statistician, and issue of the volumes containing the final figures is now almost complete. The volumes are Vol. I, comprising Parts I to II; Vol. 2, Parts I to V; Vol. 3; Vol. 4, Parts I to VII; and Vol. 5, Parts I to VIII.
- Census (1971) Results.* Preliminary figures of dwellings and the characteristics of population have been issued. A series of bulletins containing final figures is being issued progressively.
- \**Conference of British Commonwealth Statisticians, 1951, Report of Proceedings.*
- \**Dairying Industry* (formerly *Summary of Dairying Industry*). Bulletin, monthly, and half-yearly to 1971-72; annually 1972-73; first issue, September 1937.
- Demography.* Bulletin, annually, 1911 to 1969 and 1970 (combined issue). Commencing 1963, excludes details of causes of death, see *Causes of Death*.
- \**Digest of Current Economic Statistics.* Monthly from August 1959 onward.
- \**Export Commodity Classification, Australian.* Annually, 1966-67 to 1972-73 (sectional revisions).
- Exports, Australian.* Annually, 1958-59 to 1972-73.
- \**Factories, Principal Statistics, Summary.* Annually, 1948-49 to 1967-68.
- Finance.* Bulletin, 1907 to 1960-61. Commencing 1955-56, issued in two parts—Part I, Public and Private Finance; Part II, Commonwealth Taxation. Commencing 1961-62, issued as five separate bulletins, see *Banking, Finance (2), Insurance, and Taxation*.
- Finance, Commonwealth.* Bulletin, annually, 1961-62 and 1962-63 (combined issue) to 1969-70. (Commencing with the 1970-71 issue, title changed to *Public Authority Finance: Commonwealth Authorities*; commencing with the 1971-72 issue, title changed to *Public Authority Finance: Authorities of the Australian Government*.)
- Finance, Public Authority.* Bulletin, annually, 1969-70 first issue.
- Finance, Public Authority: Authorities of the Australian Government.* Bulletin, annually, 1972-73 (see following publication).
- ‡*Finance, Public Authority: Commonwealth Authorities.* Bulletin, annually, 1970-71 and 1971-72. (commencing with the 1972-73 issue, title changed to *Public Authority Finance: Authorities of the Australian Government*.)
- Finance, State, Territory and Local Government Authorities, and Local Government Securities.* Bulletin, annually, 1961-62 and 1962-63 (combined issue) to 1967-68.
- \**Food Production and the Apparent Consumption of Foodstuffs and Nutrients, Report on.* Bulletin, half-yearly, 1946-47 to 1947-48; annually, 1948-49 to 1971-72.
- \**Fruit Growing Industry* (formerly *Summary of Fruit Growing Industry*). Bulletin, annually, 1944-45 to 1971-72.
- \**Import Commodity Classification, Australian.* Annually, 1965-66 to 1972-73 (sectional revisions).
- Imports, Australian.* Bulletin, annually, 1967-68 to 1972-73.
- Imports Cleared for Home Consumption.* Annually, 1950-51 to 1972-73.

- Insurance and Other Private Finance (other than Banking and Currency)*. Bulletin, annually, 1961-62 and 1962-63 (combined issue) to 1968-69 and 1969-70 (combined issue)
- Labour and Industrial Statistics*. Memoranda and Reports, various, to 1922.
- Labour Report*, 1913 to 1972.
- Life Tables, Australian*, 1901-1910. *Australian Joint Life Tables*, 1901-1910.
- Life Tables, Australian*, 1920-1922.
- Life Tables, Australian*, 1932-1934. *Australian Joint Life Tables*, 1932-1934.
- Life Tables, Australian*, 1946-1948.
- Life Tables, Australian*, 1953-1955.
- Life Tables, Australian*, 1960-1962.
- Life Tables, Australian*, 1965-1967.
- \**Livestock Statistics* (formerly *Summary of Livestock Statistics and Livestock Numbers*). Bulletin, annually, 1943 to 1972.
- Local Government in Australia*, July 1919.
- Manufacturing Commodities*. Bulletin, annually, 1963-64 and 1964-65 (combined issue) to 1966-67 and 1967-68 (combined issue).
- Manufacturing Commodities: Principal Materials Used*. Bulletin, annually, 1968-69 and 1969-70 (combined issue), 1971-72.
- \**Manufacturing Establishments: Details of Operations by Industry Class*. Bulletin, annually, 1968-69, 1969-70, 1971-72.
- Manufacturing Industries*. Bulletins on individual industries, annually, 1936-37 to 1939-40, 1940-41 (issue incomplete) and 1944-45 to 1967-68.
- Manufacturing Industry*. Bulletin, annually, 1963-64 to 1967-68.
- Manufacturing Industry, Australian, Overseas Participation in, Part I—Overseas Ownership and Part II—Overseas Control*, 1962-63 and 1966-67.
- §*Mineral Industry, The Australian* (formerly *Minerals and Metals Bulletin*). Part II—*Quarterly Statistics* of a quarterly bulletin issued jointly with the Bureau of Mineral Resources.
- \**Mining Establishments: Details of Operations*. Bulletin, annually, 1968-69 to 1970-71 (combined issue), 1971-72.
- Mining Industry, Australian, Overseas Participation in*. Bulletin, annually, 1967 and 1968.
- Monthly Review of Business Statistics*. October 1937 onward.
- Motor Vehicles, Census of, 31st December 1955*. Bulletins, Nos. 1 to 8.
- Motor Vehicles, Census of, 31st December 1962*. Bulletins, Nos 1 to 9.
- \**Motor Vehicles, Census of, 30 September 1971*. Bulletins 1 to 9.
- Motor Vehicles, Survey of (1947-48), Results*. Bulletins, Nos 1 to 7.
- National Accounts, Australian (National Income and Expenditure)*, 1948-49 to 1961-62, first issue, mimeographed\*, to 1972-73.
- ||*Non-rural Primary Industries*. Bulletin, annually, 1964-65 to 1967-68 and 1968-69 (combined issue).
- Non-rural Primary Industries and Value of Production*. Bulletin, annually, 1962-63 and 1963-64. (Commencing 1964-65 issued as two separate Bulletins, see *Non-rural Primary Industries*, and *Value of Production*.)
- Northern Territory Statistical Summary*. Annually, 1960 to 1973.
- \**Occupation Survey (1945) Results*. Detailed tables.
- Official Year Book of the Commonwealth of Australia*. 1907 to present issue (No. 58). Issues Nos 40 to 51 also published in parts.
- Pocket Compendium of Australian Statistics* (formerly *Statistical Digest*). 1913, 1914, 1916 and 1918 to 1973, annually.
- Population and Vital Statistics*, Bulletins and Reports, various, 1906-1910.
- Primary Industries*. Bulletins, annually, 1950-51 to 1961-62 in two parts—Part I, Rural Industries; Part II, Non-rural Primary Industries and Value of Production. Commencing 1962-63, issued as two separate Bulletins, see *Rural Industries* and *Non-rural Primary Industries and Value of Production*.

- Primary Industries, Australian.* Report prepared for the Empire Producers Conference, Sydney, March 1938.
- Production.* Bulletin, annually, 1906 to 1949–50. From 1936–37 to 1949–50 issued in two parts—Part I, Secondary Industries; Part II, Primary Industries (including Total Recorded Production); thereafter separate Bulletins (*see Primary Industries and Secondary Industries*).
- Professional Papers.* Various. A full list appears in Official Year Book No. 13, page 3.
- \**Publications of the Australian Bureau of Statistics.* Annually since 1950.
- Quarterly Summary of Australian Statistics* (replaced *Monthly Summary of Australian Statistics*). December 1917 onward.
- \**Retail Establishments, Census of (1947–48), Results.* Bulletins, Nos 1 to 7.
- \**Retail Establishments, Census of (1948–49), Results.* Bulletins, Nos 1 to 7.
- \**Retail Establishments, Census of (1952–53), Results.* Bulletins, Nos 1 to 14.
- Retail Establishments, Census of (1956–57), Results.* Bulletins, Nos 1 to 8 (mimeographed\*) and 9 to 15 (printed).
- Retail Establishments and Other Services, Census of (1961–62), Results.* Bulletins, Nos 1 to 7 (printed) and 8 to 9 (mimeographed\*).
- \**Rural Holdings, Classification by Size and Type of Activity, 1959–60.* Bulletins, Nos 1 to 7.
- Rural Holdings, Classification by Size and Type of Activity, 1965–66.* Bulletins, Nos 1 to 7.
- Rural Holdings, Classification by Size and Type of Activity, 1968–69.* Bulletins, Nos 1 to 7.
- Rural Holdings, Size Classification of, 1955–56.* Bulletins, Nos 1 to 7.
- Rural Industries.* Bulletin, annually, 1962–63 to 1969–70.
- \**Rural Land Use and Crop Production* (formerly *Summary of Crop Statistics*). Bulletin, annually, 1943–44 to 1970–71.
- \**Rural Land Use, Improvements, Agricultural Machinery and Labour.* Bulletin, annually, 1971–72.
- Seasonally Adjusted Indicators.* Bulletin, annually, 1967 to 1973.
- Secondary Industries.* Bulletin, annually, 1950–51 to 1962–63 (commencing 1960–61 issued in two parts—Part I, Factory and Building Operations; Part II, Materials Used and Articles Produced in Factories). Commencing 1963–64 issued as separate bulletins, *see Manufacturing Establishments, Manufacturing Industry, Manufacturing Commodities, and Building and Construction*.
- Social Insurance.* Report to the Hon. the Minister for Trade and Customs, 1910.
- Social Statistics.* Bulletin, 1907 to 1915 annually, and 1918.
- Superannuation for the Commonwealth Public Service.* Report to the Hon. the Minister for Home Affairs, 1910.
- Taxation Assessments, Commonwealth, Annually, 1961–62 to 1970–71.*
- Trade, Overseas.* Bulletin, annually, 1906 to 1972–73.
- \**Trade, Overseas.* Preliminary Bulletin, annually, 1952–53 to 1972–73, in two parts—Part 1, Exports; Part 2, Imports. (*See also Exports, Australian; Imports, Australian; and Imports Cleared for Home Consumption.*)
- Transport and Communication.* Bulletin, 1906, 1908 to 1916 annually, 1919 to 1930 annually and 1932 to 1970–71 annually.
- || *Value of Production.* Bulletin, annually, 1964–65 to 1968–69.
- Wealth.* The Private Wealth of Australia and its Growth as ascertained by various methods, together with a Report on the War Census in 1915.
- \**Wheat Industry* (formerly *Summary of the Wheat Situation*). Bulletin, periodically; first issue, July 1936; now issued annually, 1972–73, and 1973–74 (Preliminary), with annual supplement, 1972–73 (Preliminary).
- \**Wholesale Establishments, Census of (1968–69), Results.* Final Bulletin.
- \**Wool Production and Utilisation.* Bulletin, annually, 1952–53 to 1972–73.

\* Distributed by the Commonwealth Statistician—for methods of obtaining other publications still in print *see back of this volume*.

† Previously included in *Secondary Industries, Part I—Factory and Building Operations*.

‡ Prior to 1970–71 issue, title was *Commonwealth Finance*.

§ Copies available from the Bureau of Mineral Resources, Canberra and the Department of Minerals and Energy, Melbourne and Sydney

|| Included in *Non-rural Primary Industries and Value of Production* prior to 1964–65.

### Current or recent statistical publications

The Central and State offices of the Commonwealth Bureau of Census and Statistics issue approximately 2,300 publications (600 separate titles) in printed and mimeographed form annually. Information on these publications is contained in *Publications of the Commonwealth Bureau of Census and Statistics*, 1973, available free on request from the Commonwealth Statistician, Canberra. This contains a list of all Bureau publications, a subject index to show the Central Office publications in which information on the various subjects dealt with by the Bureau is to be found, and short descriptions of major Central Office publications. The information on issues in this publication is supplemented in monthly statements. At the end of this Year Book there is a list of the current printed publications of the Central Office of the Bureau: the prices shown after the number and year of issue are, in order, price excluding postage, and price including postage in Australia.

### Commonwealth and State Parliamentary and Departmental Reports and Papers

No comprehensive list of current publications of this nature is available, but the National Library of Australia issues a quarterly publication (with annual cumulation) *Australian Government Publications*, a list of official publications of the Commonwealth, States and Territories, compiled from records of material received by the Library during the year.

The Australian Government Publishing Service, Canberra, issues a monthly publication *Australian Government Publications*. This publication lists Commonwealth publications currently becoming available or in stock, showing the titles and prices of Parliamentary Papers, Parliamentary Debates (Hansard), records of Parliamentary proceedings, Acts, Statutory Rules, Ordinances, and departmental bulletins and reports issued annually or irregularly.

Australian Government publications may be purchased *through the mail* from Mail Order Sales, Australian Government Publishing Service, P.O. Box 84, Canberra, A.C.T. 2600; *over the counter* from the Government Publications and Inquiry Centres in each State capital; and *through the mail or over the counter* from the Deputy Commonwealth Statistician in each State capital.

The National Library of Australia issues annually a publication *Australian Books*, a reprint of the 1966 issue of which is included on pages 1231–77 of Year Book No. 53. See the chapter Education, Cultural Activities and Research for further information concerning the National Library's publicising of Australian publications.

## METRIC CONVERSION FOR AUSTRALIA

### Weights and measures in Australia

Australia inherited the 'Imperial' system of weights and measures from the United Kingdom. The *Commonwealth of Australia Constitution Act* of 1900 provided the newly formed Commonwealth Parliament with powers to make laws governing weights and measures (Section 51 (xv)). This power was not exercised till 1948 when a *Weights and Measures (National Standards) Act* was passed. This Act provided '... for the establishment and use throughout Australia of uniform units of measurement, and uniform standards of measurement, of physical quantities ...'.

The Act transferred to the Commonwealth the power to specify particular units for particular purposes. In 1960, because it was felt that the States should be able to exercise certain of these powers, the 1948 Act was repealed and replaced by an Act which allowed the States to legislate in certain areas.

### The National Standards Commission

The *Weights and Measures (National Standards) Act* 1960–1966 Section 4: states that 'The objects of this Act are to provide for the establishment and use throughout Australia of uniform units of measurement and uniform standards of measurement of physical quantities'.

The responsibility for achieving these aims is in the hands of the National Standards Commission, which is empowered to set up an adequate system for standardising the measurement of physical quantities for Australia, the units that are to be part of that system, and means of assuring the traceability of standards back to the Commonwealth standards maintained by the Commonwealth Scientific and Industrial Research Organisation. The Commission represents Australia on the International Organisation of Legal Metrology (OIML) which provides a forum and working organisation whose objective is to achieve international uniformity of measuring processes.

New legislation is currently under consideration to give effect to the decision of the Commonwealth Government to introduce a metric system of units and measurements as the sole system of measurement in Australia. A hybrid system of metric units has always been permitted as an

alternative to imperial units under the regulations which the Commission administers. Changes are to be made so that the system of metric units to be adopted will conform with the International System (SI) of units.

In 1966 at the request of the States the Commonwealth Government revised the functions of NSC to include responsibility for the approval of patterns of measuring instruments for use in trade; these are the patterns of instruments required by State Weights and Measures laws, to be checked and verified at regular intervals. For this purpose, the Commission set up the Pattern Approval Laboratory which currently approves in the vicinity of fifty new patterns annually.

#### **Commonwealth legal units**

The Commonwealth legislation is intended to define those units which are legal for measurement. Section 7 of the above act states that the regulations may prescribe units of measurement of any physical quantity and those units shall be the sole legal unit of measurement of that quantity.

However, the use of such units for the purpose of trade is, in general, controlled by State legislation. Until 1972 the States had only permitted the use of the imperial units; consequently, goods sold in the shops in Australia had to be marked with their contents in imperial units. As a step towards the conversion, many goods may now (from September 1972) be sold in packages marked solely in metric units.

#### **The decision to change**

In April 1967, a Senate Select Committee was appointed to inquire into the metric system of weights and measures. Between then and May 1968, the Committee, under the chairmanship of Senator K. A. Laught, heard evidence, in all capital cities, from 141 witnesses, and received written submissions from 54 persons or organisations.

The Committee reported unanimous agreement that it was practicable and desirable for Australia to adopt the metric system of weights and measures at an early date. The Committee's findings included the following.

Evidence from a wide segment of the community overwhelmingly supported an early change to the sole use of the metric system and indicated that there would be no insuperable difficulties. About 90 per cent of the world's population already use metric measurements and this use is increasing.

About 75 per cent of world trade is carried out in metric terms. Some 70 per cent of Australia's export trade is to countries using or converting to metric weights and measures. This proportion will increase as Australia's trade with Japan and South-East Asian countries grows.

A metric system would improve the teaching of mathematics and science, reduce errors and save time.

A metric system would provide an opportunity to improve industrial and manufacturing efficiency by rationalising existing practices and reducing unnecessary varieties in sizes and components.

Introduction of a metric system was widely regarded as a natural consequence of Australia's earlier conversion to decimal currency. The full advantages of decimal currency would not be experienced until decimal weights and measures were also used.

The Committee was satisfied that the ultimate benefits of conversion would greatly exceed the costs.

#### **Metric Conversion Board**

*The Metric Conversion Act 1970* was assented to on 12 June 1970 and stated as its object (in Section 5) 'to bring about progressively the use of the metric system of measurement in Australia as the sole system of measurement of physical quantities'. It provided the Minister with powers on behalf of the Commonwealth, to do such things, make such arrangements and enter into such agreements as he thinks conducive to the attainment of this objective, and it established the Metric Conversion Board. It extended to all the Territories of the Commonwealth except Papua New Guinea.

In most other countries that are presently converting to the metric system, a Board has been appointed to give guidance for the change. Thus in the United Kingdom the Metrication Board was appointed in 1969, in South Africa a Metrication Advisory Board was appointed in 1967, and in New Zealand a Metric Advisory Board was appointed in 1970.

The Metric Conversion Act provided for such a Board and on 1 July 1970 a Board of thirteen members was appointed under the chairmanship of Mr J. D. Norgard, B.E., F.A.S.A.S.M. (Met.). It comprises members who are experienced in many of the sectors for which conversion will be important. They are drawn from all States of the Commonwealth and include representatives of industry, commerce, the States and the Commonwealth. In July 1972, the membership of the Board was increased to fourteen.

**Committees of the Board**

The Government has made it clear that the metric change will be predominantly voluntary. It will be planned and implemented by those who will themselves be affected by it. Accordingly, the Board's first major task was to establish a committee structure to assist in the development and implementation of conversion programs. All the major activities within the community likely to be affected by metric conversion were identified. They were then grouped so that each activity group would have an Advisory Committee responsible for its conversion. Each Advisory Committee was supported by several Sector Committees. These comprised nominees from appropriate organisations, national associations and institutes, and Government departments. They were established to cover specific activities. Where a specific aspect of conversion requires detailed consideration a Panel may be appointed to report to a Sector Committee.

The Advisory Committees are each chaired by a Board Member and have the task of co-ordinating the programs and proposals for conversion before submitting them to the Board for consideration for inclusion in overall conversion plans.

By June 1971, as indicated in the First Annual Report of the Board, all 11 Advisory Committees had been established. In all, more than 600 individual members, drawn from virtually all relevant business, professional, technical and government fields, had been appointed to Advisory and Sector Committees, filling some 800 committee positions. By June 1972, as the Board's Second Annual Report indicates, planning of conversion programs was well advanced in many sectors.

The chart on page 1046 shows the present structure of the Board and its committees. This structure will be changed appropriately as conversion proceeds. Now that programs have been prepared and issued the work of many sector committees is nearing completion.

**International system of units**

In general Australia is adopting the International System of Units, commonly known by its abbreviation SI (*Système Internationale*). This is the system adopted by the International General Conference on Weights and Measures.

Many people are familiar with the centimetre-gram-second (CGS) system which has long been in use in physical science. Whilst the SI system closely resembles the CGS system, it is not identical with it. Many people living in Europe are familiar with many of the SI units but they also use units which are not part of the SI system. For example, such units as the dyne and the erg do not appear in the SI system.

The International System of Units comprises a set of seven base units, some supplementary units for angular measurement, and derived units. The base units are the metre (length), kilogram (mass), second (time), ampere (electrical current), kelvin (temperature), candela (luminous intensity), and mole (amount of substance). A striking advantage of SI over the older system is that there is only one SI unit for each physical quantity and also there are no odd multiplying factors to be remembered. Some of the derived units have special names (e.g. the joule, the watt) while for others the names are derived from the base units comprising them (e.g. the metre per second).

In addition, for larger or smaller amounts, decimal multiples or submultiples of the SI unit may be used. The names of each of these is obtained by combining a prefix with the name of the unit. The prefixes, with their symbols and values, are as follows:

Prefix	Symbol	Value
Commonly used:		
giga . . . . .	G	10 <sup>9</sup>
mega . . . . .	M	10 <sup>6</sup>
kilo . . . . .	k	10 <sup>3</sup>
centi . . . . .	c	10 <sup>-2</sup>
milli . . . . .	m	10 <sup>-3</sup>
micro . . . . .	μ	10 <sup>-6</sup>
Less commonly used:		
tera . . . . .	T	10 <sup>12</sup>
hecto . . . . .	h	10 <sup>2</sup>
deka . . . . .	da	10
deci . . . . .	d	10 <sup>-1</sup>
nano . . . . .	n	10 <sup>-9</sup>
pico . . . . .	p	10 <sup>-12</sup>
femto . . . . .	f	10 <sup>-15</sup>
atto . . . . .	a	10 <sup>-18</sup>

NOTE. It is recommended that only multiples of 10<sup>9</sup> be used and except in special cases the prefixes hecto, deka, deci and centi should be avoided.

Some units are not decimally related to the basic SI units but are of such significance that their continued use is necessary. Notable examples are the minute and hour for time intervals, and the degree, minute and second for angular measurement. Other non-SI units such as the nautical mile (1,852 metres) are the subject of international agreements, so their use must be continued for limited applications. There are other non-SI units which are provided for practical purposes in the public interest: for example, car speeds are quoted in kilometres per hour rather than metres per second.

Special names of SI units which are being recommended by the Metric Conversion Board for general use include the litre ( $10^{-3}$  cubic metres), the tonne (1,000 kilograms) and the hectare (10,000 square metres). The millibar has been recommended for the measurement of pressure for meteorological purposes only, because of international meteorological practice. Non-SI units recommended for restricted use in particular industries only, include the nautical mile and knot for marine and aerial navigation and the kilowatt hour for the measurement of electrical energy.

The table on page 1047 lists the most important everyday metric units with some of the imperial units they will replace and the conversion factors.

### Program and planning

Conversion is expected to proceed simultaneously throughout many different sectors of the community. Unlike the decimal currency change there will be no single starting or finishing date for the change. For some activities such as for pharmaceuticals, the change has already been made.

Each sector is developing a program appropriate to its activities and circumstances, but in the process account must be taken of related activities in other sectors. The structure of Sector and Advisory Committees established by the Board is intended to facilitate the development of individual programs, and their integration into an overall conversion program.

The broad aim laid down by the Government in 1970 was that conversion should be substantially complete by 1980. Within this broad objective the following stages of implementation have been established:

1970-71	.	.	.	.	Planning and co-ordination
1972	.	.	.	.	Increasing public awareness
1973-75	.	.	.	.	Major implementation
1976	.	.	.	.	70-80 per cent of nation's activity to be converted.

Progress is generally on schedule. Programs are being issued for many sectors of commerce and industry, while conversion activities are becoming increasingly noticeable.

### Detailed programs

Conversion has been completed in the following areas:

Clay bricks, meteorology (temperature forecasts), horse racing, packaged goods (sole metric marking permitted), customs-excise Tariffs, tide tables, wool sales (bulk), new land titles.

During 1972 conversion was initiated in the following areas:

Primary education, farm milk tanks, wholesale meat, wine industry (bulk), wheat, barley, coarse grains, sugar.

During 1973 conversion is expected to be complete in the following areas:

Advertising, bread, building and construction (design), concrete bricks, all primary and secondary education, flat glass manufacture, furniture, retail meat, wind speed forecasts, paper, pharmaceutical packaging, printing, plastics and chemicals, ready-mixed concrete, storage, transport freight rates, water and sewerage rates.

	Game Furskin and Miscellaneous	Wholesaling and Retailing (Other)								
	Agricultural Machinery	Dairy Products (with Consumer Goods and Service Industries)								

## METRIC UNITS AND CONVERSION FACTORS

Quantity	Imperial unit	Metric unit	Conversion Factors	
			Imperial to Metric units	Metric to Imperial units
Length	inch (in)	millimetre (mm) or centimetre (cm)	1 in = 25.4 mm	1 cm = 0.394 in
	foot (ft)	centimetre (cm) or metre (m)	1 ft = 30.5 cm	1 m = 3.28 ft
	yard (yd)	metre (m)	1 yd = 0.914 m	1 m = 1.09 yd
	furlong (fur)	metre (m) or kilometre (km)	1 fur = 201 m	1 km = 4.97 fur
	mile	kilometre (km)	1 mile = 1.61 km	1 km = 0.621 mile
For navigation		international nautical mile (n mile)	1 n mile = 1852 m	
Mass	ounce (oz)	gram (g)	1 oz = 28.3 g	1 g = 0.0353 oz
	pound (lb)	gram (g) or kilogram (kg)	1 lb = 454 g	1 kg = 2.20 lb
	stone	kilogram (kg)	1 stone = 6.35 kg	1 kg = 0.157 stone
	ton	tonne (t)	1 ton = 1.02 t	1 t = 0.984 ton
Area	square inch (in <sup>2</sup> )	square centimetre (cm <sup>2</sup> )	1 in <sup>2</sup> = 6.45 cm <sup>2</sup>	1 cm <sup>2</sup> = 0.155 in <sup>2</sup>
	square foot (ft <sup>2</sup> )	square centimetre (cm <sup>2</sup> ) or square metre (m <sup>2</sup> )	1 ft <sup>2</sup> = 929 cm <sup>2</sup>	1 m <sup>2</sup> = 10.8 ft <sup>2</sup>
	square yard (yd <sup>2</sup> )	square metre (m <sup>2</sup> )	1 yd <sup>2</sup> = 0.836 m <sup>2</sup>	1 m <sup>2</sup> = 1.20 yd <sup>2</sup>
	perch (p)	square metre (m <sup>2</sup> )	1 p = 25.3 m <sup>2</sup>	1 m <sup>2</sup> = 0.0395 p
	rood (rd)	hectare (ha)	1 rd = 0.101 ha	1 ha = 9.88 rd
	acre (ac)	hectare (ha)	1 ac = 0.405 ha	1 ha = 2.47 ac
	square mile	square kilometre (km <sup>2</sup> )	1 square mile = 2.59 km <sup>2</sup>	1 km <sup>2</sup> = 0.386 square mile
Volume	cubic inch (in <sup>3</sup> )	cubic centimetre (cm <sup>3</sup> )	1 in <sup>3</sup> = 16.4 cm <sup>3</sup>	1 cm <sup>3</sup> = 0.0610 in <sup>3</sup>
	cubic foot (ft <sup>3</sup> )	cubic metre (m <sup>3</sup> )	1 ft <sup>3</sup> = 0.0283 m <sup>3</sup>	1 m <sup>3</sup> = 35.3 ft <sup>3</sup>
	cubic yard (yd <sup>3</sup> )	cubic metre (m <sup>3</sup> )	1 yd <sup>3</sup> = 0.765 m <sup>3</sup>	1 m <sup>3</sup> = 1.31 yd <sup>3</sup>
	bushel (bus)	cubic metre (m <sup>3</sup> )	1 bus = 0.0364 m <sup>3</sup>	1 m <sup>3</sup> = 27.5 bus
Volume (fluids)	fluid ounce (fl oz)	millilitre (ml)	1 fl oz = 28.4 ml	1 ml = 0.0352 fl oz
	pint (pt)	millilitre (ml) or litre (l)	1 pt = 568 ml	1 litre = 1.76 pt
	gallon (gal)	litre (l) or cubic metre (m <sup>3</sup> )	1 gal = 4.55 litres	1 m <sup>3</sup> = 220 gal
	acre foot	cubic metre (m <sup>3</sup> ) or megalitre (Ml)	1 acre foot = 1230 m <sup>3</sup> = 1.23 Ml	1 Ml = 0.811 acre-foot
Force	pound-force (lbf)	newton (N)	1 lbf = 4.45 N	1 N = 0.225 lbf
	ton-force (tonf)	kilonewton (kN)	1 tonf = 9.96 kN	1 kN = 0.100 tonf
Pressure	pound per square inch (psi)	kilopascal (kPa)	1 psi = 6.89 kPa	1 kPa = 0.145 psi
	atmosphere (atm)	kilopascal (kPa) or megapascal (MPa)	1 atm = 101 kPa	1 MPa = 9.87 atm
	ton per square inch (ton/in <sup>2</sup> )	megapascal (MPa)	1 ton/in <sup>2</sup> = 15.4 MPa	1 MPa = 0.0647 ton/in <sup>2</sup>
For meteorology	inch of mercury (inHg)	millibar (mb)	1 inHg = 33.9 mb	1 mb = 0.0295 inHg 1 mb = 100 Pa
Speed For navigation	mile per hour (mph)	kilometre per hour (km/h)	1 mph = 1.61 km/h	1 km/h = 0.621 mph
		knot (kn)	1 kn = 1.85 km/h	
Temperature	degree Fahrenheit (°F)	degree Celsius (°C)	°C = $\frac{5}{9}(°F - 32)$ °F = $\frac{9}{5}°C + 32$	
Density	pound per cubic inch (lb/in <sup>3</sup> )	gram per cubic centimetre (g/cm <sup>3</sup> )	1 lb/in <sup>3</sup> = 27.7 g/cm <sup>3</sup>	1 g/cm <sup>3</sup> = 0.0361 lb/in <sup>3</sup>
		= tonne per cubic metre (t/m <sup>3</sup> )	1 lb/in <sup>3</sup> = 27.7 t/m <sup>3</sup>	1 t/m <sup>3</sup> = 0.0361 lb/in <sup>3</sup>
	ton per cubic yard	tonne per cubic metre (t/m <sup>3</sup> )	1 ton/yd <sup>3</sup> = 1.33 t/m <sup>3</sup>	1 t/m <sup>3</sup> = 0.752 ton/yd <sup>3</sup>
Energy	British thermal unit (Btu)	kilojoule (kJ)	1 Btu = 1.06 kJ	1 kJ = 0.948 Btu
	therm	megajoule (MJ)	1 therm = 106 MJ	1 MJ = 9.48 × 10 <sup>-3</sup> therm
For electrical energy		kilowatt hour (kWh)	1 kWh = 3.60 MJ	
Power	horsepower (hp)	kilowatt (kW)	1 hp = 0.746 kW	1 kW = 1.34 hp
Time		second (s)		1 min = 60s
		minute (min)		1 h = 3600 s
		hour (h)		
Frequency	cycle per second (c/s)	hertz (Hz)	1 c/s = 1 Hz	1 Hz = 1 c/s
Angular velocity	revolution per minute (rpm)	radian per second (rad/s)	1 rpm = 0.105 rad/s	1 rad/s = 9.55 rpm
		revolution per minute (rpm)		

## STATISTICAL SUMMARY: AUSTRALIA

In earlier issues of the Year Book, it was the practice to include in the Statistical Summary figures for every tenth year of the period 1861 to 1901, plus the latest year for which data were available. In each subsequent issue the latest year available was substituted for the year immediately preceding it until the next tenth year had been reached, and the earliest year in the series was eliminated as space was needed. In consequence of this system no single issue of the Year Book contained a continuous yearly series.

In this and recent issues of the Year Book, this defect has been remedied in part by the inclusion of a continuous series back to the year 1941, with earlier tenth years back to 1901 (the National Accounts series on page 1040 has been carried back to 1900-01 in single years). In issue No. 39, pages xxviii-xxix, some of the series are shown for every tenth year from 1861 to 1941. There are, however, discrepancies between the original series and the series now published.

Breaks in series, preliminary figures, etc., are indicated by the symbols shown on page xiii of this Year Book.

## STATISTICAL SUMMARY: AUSTRALIA

(a) Excludes Northern Territory and Australian Capital Territory before 1 July 1964. (b) Average over whole year; includes working proprietors. (c) Excludes amounts drawn by working proprietors. (d) Value added in process of manufacture (i.e. value of output less value of materials and fuel used). (e) Depreciated or book value at end of year, including estimated value of rented premises and machinery. (f) Year ended previous December. (g) Owing to variation in classification, effective comparison is not possible. (h) Direct comparisons with figures for previous years are not possible (for details, see page 729).

(a) At 31 December. Base: year 1954 = 100, weighted average. Excludes rural industry. (b) Base: year 1911 = 100. The index numbers are presented as a continuous series, but they give only a broad indication of long-term trends in retail price levels. They are derived by linking a number of indexes that differ greatly in scope. The successive indexes used are: from 1901 to 1914, the 'A' Series Retail Price Index; from 1914 to 1946–47, the 'C' Series Retail Price Index; from 1946–47 to 1948–49, a composite of Consumer Price Index Housing Group (partly estimated) and 'C' Series Index excluding Rent; and from 1948–49 onwards, the Consumer Price Index. (c) November.

(a) Government and municipal. Trolley-bus services ceased in August 1969. (b) At end of period. (c) Open and closed light commercial type vehicles, rigid and articulated trucks, other truck type vehicles and buses. (d) Letters, postcards, letter-cards, newspapers, packets, parcels, and registered articles. (e) All single lines plus one half the number of duplex lines. Until the introduction of duplex services in December 1948, statistics of exchange lines and telephone services were identical. (f) Telegrams despatched to places within Australia and despatched to or received from overseas. (g) Year ended previous December. (h) Year 1923-24. First year licences issued. (i) Tramway passenger journeys only before 1942. (j) Excludes telegrams received from overseas. These particulars are no longer available.

(a) For a description of constant price estimates, see *Australian National Accounts*, op. cit. pp 15 and 105. (b) N. G. Butlin, *Australian Domestic Product, Investment and Foreign Borrowing 1861-1938-39*, Cambridge University Press, Cambridge, 1962. Gross domestic product excluding livestock accumulation approximates conceptually gross domestic product as defined in the Australian National Accounts. (c) Published by the Commonwealth Statistician. Figures prior to 1948-49 are from *National Income and Expenditure* 1955-56 and are not strictly comparable with subsequent figures because of a number of definitional changes and statistical revisions; see pages 18-19, 117-20, *Australian National Accounts* 1948-49 to 1961-62, Commonwealth Bureau of Census and Statistics. (d) *Australian National Accounts* 1971-72, Commonwealth Bureau of Census and Statistics, and, for the last five years, the Budget Paper *National Income and Expenditure* 1972-73. The figures of \$1,800m for gross national product and \$316m for gross fixed capital expenditure in 1938-39 are based on a reconstruction of earlier estimates, and are approximately consistent with the present Australian National Account series. Mr B. D. Haig ('1938-39 National Income Estimates', *Australian Economic History Review*, Vol. vii, No. 2, September 1967) has adjusted components of gross national expenditure and imports and exports for changes in prices. If the price indexes implied by Mr Haig's estimates are used to revalue at 1938-39 prices gross domestic product and gross fixed capital expenditure for 1948-49, values of \$2,384m and \$434m, respectively are obtained. (e) N. G. Butlin, op. cit. For a variety of reasons, Professor Butlin's gross domestic capital formation figures given here differ conceptually from those for gross fixed capital expenditure in the Australian National Accounts.

(a) Years ended at varying dates for education statistics. Years ended 30 June for Police and Prisons. (b) Includes two universities not yet enrolling students.

# CHRONOLOGICAL TABLE

## CHIEF EVENTS IN AUSTRALIA SINCE 1955

NOTES. In issues of the Year Book up to No. 48 (*see* No. 48, page 1201) this table covered events back to the establishment of settlement in Australia in 1788. Later issues up to No. 50 (*see* No. 50, page 1289) covered events back to 1945. This issue covers the years 1955 to 1972 and the first half of 1973.

For each earlier year this Table rarely contains more than two or three items; for recent years, however, in order to provide a wide cover of events, etc., it includes a much greater number. Both the nature of the Table and considerations of space render necessary a continual reduction in these items, and for more information the reader should therefore consult earlier issues.

- 1955 First power generated by Snowy Mountains Hydro-electric Authority. Australian population reached 9,000,000. Cocos (Keeling) Islands became Territory under authority of Commonwealth.
- 1956 Amendment to Conciliation and Arbitration Act altered the structure of the arbitration machinery by separating judicial functions from conciliation and arbitration functions.
- 1957 High Court ruled that interstate vehicles could not be compelled to register in New South Wales, but upheld validity of Victorian tax on commercial vehicles, including those engaged in interstate trade, imposed solely for the maintenance of roads. National Capital Development Commission set up to co-ordinate development of Canberra.
- 1958 Prime Minister officially opened Australia's first nuclear reactor at Lucas Heights, near Sydney. Christmas Island (Indian Ocean) transferred to Australian Administration.
- 1959 Annual Holidays Act, 1944–1958 provided for three weeks' annual holiday for all New South Wales workers. Population reached 10,000,000.
- 1960 Provision made for Social Service benefits to be paid to Australian Aborigines. *Commonwealth Banks Act* 1959 and *Reserve Bank Act* 1959 proclaimed (*see* page 498). National Service training suspended. Commonwealth Government announced special economic measures designed to counter inflationary trend and safeguard overseas funds.
- 1961 Commonwealth *Matrimonial Causes Act* 1959 unifying State Acts became operative. Oil discovered in south-west Queensland. Australian population census taken. Iron ore deposits estimated at 1,800 million tons discovered at Pilbara (Western Australia).
- 1962 Commonwealth and Western Australian Electoral Acts amended to provide for votes for Aborigines. Aborigines exercised voting rights in Northern Territory for first time.
- 1963 Approval given to agreement for United States to operate a naval communications station at North West Cape, Western Australia. Australian population reached 11,000,000.
- 1964 R.A.N. Destroyer *Voyager* sunk in collision off Jervis Bay. New South Wales Government employees granted four weeks' annual leave. Moonie to Brisbane oil pipeline opened. Northern Territory removed discrimination against Aborigines. Australian forces saw action in Malaysia. Resumption of National Service Training and establishment of special Reserve Forces announced.
- 1965 Full High Court judgement on intra-state airlines case held that intra-state services need to hold both a State licence and a Commonwealth licence. Martin Report on tertiary education tabled in House of Representatives. Economic sanctions imposed on Rhodesia.
- 1966 The New Zealand–Australia Free Trade Agreement came into force. Australia adopted decimal currency. Immigration laws amended to provide for relaxation of restrictions on entry of persons of non-European race. Member for Australian Capital Territory given full voting rights. 1966 census taken. Permanent employment of married women by Commonwealth Government proclaimed.
- 1967 Worst bushfires in history of Tasmania. *Trade Practices Act* 1965–1967 came into force. Australian Resources Development Bank formed. Government decision not to devalue Australian dollar with pound sterling announced. Australia launched its first satellite at Woomera. Senate select committee recommended that Australia change over to metric system of weights and measures. Prime Minister, Rt Hon. Harold Holt drowned off Portsea, Victoria.

- 1968 Uniform Commonwealth-State censorship laws came into force. Twelve-mile fishing limit around Australia, Nauru, Papua New Guinea, and Cartier Islands operated from 30 January. Nauru became an independent nation on 31 January. Joint Commonwealth-State off-shore petroleum legislation operated from 1 April. Population reached 12,000,000. Northern Territory member in House of Representatives given full voting rights. *Privy Council (Limitation of Appeals) Act* 1968 came into operation. An Ordinance to prevent the takeover of life insurance companies registered in the Australian Capital Territory became operative.
- 1969 The *Copyright Act* 1968 became operative. The Arbitration Commission handed down its decision on equal pay for women (*see* page 267). The High Court ruled that the States had no rights or jurisdiction over territorial waters adjacent to their coastline or over the sea-bed. Bass Strait under-sea oil piped to shore for the first time.
- 1970 The *Patents Act* 1969 came into effect. The Federal Government imposed controls on the export of Australian natural gas. The *Indian-Pacific* rail passenger service inaugurated. Australia signed the Nuclear Non-Proliferation Treaty. A High Court judgment in Sydney upheld the validity of the Trade Practices Tribunal. The *Continental Shelf (Living Natural Resources) Act* 1968 came into effect. The *Australian Industry Development Corporation Act* 1970 assented to. The *Marginal Dairy Farmers Agreement Act* 1970 came into effect. The Snowy Mountains Engineering Corporation was established. Tullamarine International Airport opened. The Metric Conversion Board appointed. Assent was given to two land lease ordinances granting the Aborigines exclusive land leasing rights for specified purposes over the 93,000 square miles of Aboriginal reserves in the Northern Territory. Coal miners in three states were awarded a 35 hour working week which is to be phased in over a twelve month period. New film censorship procedures agreed to by Federal and State ministers. The flexible reserve wool price scheme came into operation. Senate elections held. Voting age reduced to 18 years in Western Australia. Assent given to an ordinance in the Australian Capital Territory that prevented overseas take-overs of mining companies.
- 1971 The Commonwealth and States agreed on details of the rural reconstruction scheme. Victorian Aborigines to be granted ownership of reserves at Lake Tyers and Framlingham, Victoria. Labor Party returned in Western Australia. South Australia lowered the age of adulthood to eighteen years. It was announced that the Commonwealth Government would prepare a program for the movement of Papua New Guinea to full internal self-government in the period 1972-76. The Yirrkala Aborigines legal challenge for land rights at Gove was dismissed. Australia signed a new five power defence agreement in London. Seabed agreement between Indonesia and Australia signed in Canberra. The new Commonwealth Department of the Environment, Aborigines and the Arts created. Australia joined the Organisation for Economic Co-operation and Development. An Australian Labor Party delegation of five left for a visit to China (People's Rep). The 1971 Census of Population and Housing was held. First Commonwealth Government fellowships for Australian composers awarded. Sydney City Council released its strategic plan, up to the year 2000, for the City of Sydney. Legislation banning resale-price maintenance became operative. The two-years full-time duty under the National Service Act reduced to eighteen months. Historic wool sale in Canberra, buyers seeing only representative samples from core tests. Rural reconstruction employment training scheme commenced for farmers displaced from rural industry. The Metal Trades Industry Association and metal trades unions in New South Wales agreed on the principle of full accident pay to cover 80,000 N.S.W. unionists. Patient's contribution for drugs under the Pharmaceutical Benefits Scheme increased from 50 cents to 1 dollar. The operational role of the Australian Task Force in South Vietnam ended. The Commonwealth Bureau of Roads began a nationwide survey of roads. The report of the Senate Select Committee on Off-shore Petroleum Resources tabled. Australian Commission on Advanced Education was established.
- 1972 *January*. Female employees (approximately 1,300,000) received full entitlement to equal pay in terms of the 1969 Equal Pay Case decision (*see* page 267). The Waterside Workers Federation agreed to the voluntary retirement of 300 waterside workers on grounds of 'redundancy'. Australia's largest trade union, with over 150,000 members came into being with the merging of the Boilermakers' and Blacksmiths' Society, and the Sheet Metal Workers' Union with the Amalgamated Engineering Union. It was announced that the Government would introduce a scheme of portable age, invalid, widows' pensions for pensioners who leave Australia to reside overseas.
- February*. The revised Trade Practices Act—the *Trade Practices Act* 1971—became operative. The report tabled of the Senate Standing Committee on Education, Science and the Arts relating to the Commonwealth's Role in Teacher Education.

*March.* The New South Wales State Industrial Commission ratified an agreement to pay 25,000 steelworkers in Newcastle and Port Kembla full pay when off work through injury on the job.

*April.* State elections held and the Labor Party came into office in Tasmania.

*May.* State elections were held in Queensland and the Country Party-Liberal Party coalition was returned. The A.C.T.U. placed a black ban on all French ships and aircraft in Australia as a protest against continuing French nuclear testing in the Pacific; this ban was followed by widespread protests against the tests.

*June.* A 35-hour week was granted to waterside workers. The Australian Wool Board and the Australian Wool Commission were amalgamated to form the Australian Wool Marketing Corporation. The Ord River Dam was officially opened.

*July.* Broken Hill South mine closed. Aboriginal Tent Embassy outside Parliament House, Canberra closed having existed for several months.

*August.* Oil companies began delivering supplies of petrol to Sydney following a dispute by oil industry maintenance workers which began in June 1972. The dispute which had spread to four States ended with the acceptance by unions of pay and leave increases. The report of the Randall Committee set up to investigate the marketing of wool was tabled in the House of Representatives. Following the resignation of Sir Henry Bolte, Mr R. J. Hamer was elected Premier of Victoria. The Federal Government announced that the amount spent on universities and colleges of advanced education in the 1970-72 triennium would be increased by \$200 million for the 1973-75 triennium. An application by three South Australian teenagers claiming that because they could vote in their State elections they were eligible to vote in Federal elections, was rejected by the High Court.

*September.* In keeping with the change to metric units, Celsius was adopted in lieu of Fahrenheit.

*October.* The Tariff Board will conduct a systematic examination over the next six years of the protection levels afforded to highly protected manufacturing industries. Australia and Indonesia signed an agreement fixing the sea bed boundary between Australia and Indonesian Timor. Approval was given for 302 Asian Ugandans to be re-settled in Australia.

*November.* There was an outbreak of cholera among airline passengers arriving from overseas. Australia experienced its first domestic air hijack. The new Foreign Take-overs Act which came into force on 31 October, was used to freeze a number of take over bids. All major Queensland Government works must now include a statement of the environmental impact of such works. The development and production of the Sarich orbital engine is to be supported by B.H.P.

*December.* Federal elections for the House of Representatives were held and the Australian Labor Party was elected to govern for the first time in 23 years. An interim two man Ministry consisting of the Prime Minister, Mr E. G. Whitlam and the Deputy Prime Minister, Mr L. H. Barnard, was sworn in. The new Labor Government ended the call-up of National Servicemen; released National Service Act offenders; removed the excise duty on wine; announced that National Servicemen completing their training would be eligible for war service homes; announced the intention to apply for the 'equal pay case' to be re-opened and announced that in future sporting teams selected on a racial basis would be excluded from Australia. The Interim Committee, Australian Schools Commission was appointed. Mr Justice Woodward was appointed as Commissioner to conduct a judicial inquiry into the legal recognition of Aboriginal rights to land. The appointment of Miss Elizabeth Evatt as the first woman Presidential Member of the Conciliation and Arbitration Commission was announced. The Second Whitlam Ministry of 27 Ministers administering 37 departments (16 of them new departments) was sworn in. Australia announced the establishment of diplomatic relations with the People's Republic of China and the German Democratic Republic.

1973 *January.* For the first time, the Arbitration Commission awarded some workers full wages while they are on workers' compensation. Age, invalid and widows pensions were increased by \$1.50 per week. In future these pensioners will be paid at a common rate of \$21.50 for single and \$37.50 per week for married persons. Commonwealth Government increased repatriation pensions. An extra week's annual leave was granted to 250,000 Commonwealth public servants. It was announced that Australia is ratifying the Nuclear Non-proliferation Treaty and the Seabed Arms Control Treaty. The Premiers of Victoria and New South Wales and the Prime Minister agreed that Albury-Wodonga area would be developed as a new

growth complex. Land prices in the proposed growth complex have been frozen at the 3 October 1972 levels. A Royal Commission (3 members) will be appointed to inquire into the operation of the Post Office with a view to determining if it should be a statutory corporation.

*February.* Changes in Australian divorce rules came into operation. The United Kingdom-Australia Trade Agreement terminated. It was announced that an environment impact statement must be prepared for all developmental projects which have significant environmental consequences where Australian Government funds and or Federal constitutional power is involved. The Prime Minister visited Port Moresby on his way to a four day official visit to Indonesia. It was announced that a National Pipeline Authority along the lines of the Snowy Mountains Hydro-Electric Authority would be established to build a natural gas pipeline system across Australia. The Aboriginal Consultative Committee held its first meeting. The 40th International Eucharistic Congress was held in Melbourne. The first session of the 28th Parliament was opened.

*March.* The Labor Party was returned following elections in South Australia. Australia ratified ILO Conventions Numbers 87 (Freedom of Association) and 98 (Right to Organise and Collective Bargaining). Committee of Inquiry into a National Superannuation Scheme appointed. A \$300 million development plan for BHP at Port Kembla began; it will boost steel production capacity 1.7 million tons to around 5.5 million tons per annum by 1975-76. Federal Government announced that fees at all Australian universities and other tertiary education colleges will be abolished from 1 January 1974. The export ban on kangaroo products became effective. Legislation giving votes to eighteen year olds became effective under the *Commonwealth Electoral Act 1973*.

*April.* Federal Government appointed an 11 member National Committee on Social Welfare with the long term objective of recommending an integrated and balanced national welfare program. The Committee is headed by Mrs Marie Coleman who was appointed full-time for seven years. Federal Government set up a special task force headed by Dr H. C. Coombs to 'apply a close scrutiny to continuing policies of the previous Government so that room may be found for our own higher priority programs'.

*May.* National Wage Case decision resulted in an increase in Commonwealth award wages of 2 per cent plus \$2.50 a week. The rates of minimum wage for adult males were increased by \$9.00 a week. These increases operated from the first pay period commencing on or after 29 May. Subsequently similar increases operated in State awards in N.S.W., Vic., S.A. and Tas. Queensland Basic Wage rates were increased by \$1.90 a week for adult males and by \$2.05 a week for adult females. Margins in awards were increased by 2 per cent and the minimum wage for adult males was increased by \$7.70 a week. In Western Australia the basic wage for adult males was increased by \$3.55 a week and by \$3.60 a week for adult females. The minimum wage for adult males was increased by \$3.50 a week. The A.C.T. Abortion law reform legislation was defeated by 98 votes to 23 in the House of Representatives. An Australia-wide union ban on French goods, ships, aircraft and communications began in response to the forthcoming French nuclear tests. Victorian State elections were held and the Victorian Liberal Party was returned to government. The report of the Interim Committee for the Australian Schools Commission recommended a big increase in spending on education (\$660 million on primary and secondary schools over the next two years).

*June.* A N.S.W. environmental inquiry into the routing of the natural gas pipeline from the gas fields in South Australia to Sydney, recommended the southern route (Moomba-Young-Sydney). The Federal Government Prices Justification Tribunal has power to order cuts as well as rule against price rises. The Australian Government rejected the Australian Medical Association's decision to raise fees by an estimated 24.8 to 29.0 per cent. Following an application by Australia the International Court of Justice ordered France to halt nuclear tests in the atmosphere over the Pacific Ocean. HMAS *Supply* left Sydney for the French nuclear test zone to rendezvous with the New Zealand frigate *Otago*. The presence of the warships was a 'last resort' gesture against the French nuclear tests. Legislation amending the Income Tax Assessment Act concerning deductions for life insurance premiums and superannuation contributions became effective. Maternity Leave Act granted women employees in the Australian Public Service twelve weeks maternity leave on full pay, with up to additional forty weeks leave without pay. Male employees became eligible for one weeks leave on full pay at the time of the birth of a child; the Act operated retrospectively from 1 January 1973.

## DIARY OF PRINCIPAL ECONOMIC EVENTS, 1972-73

The principal economic events in earlier years were shown in the following issues.

<i>Years</i>	<i>Year Book No.</i>	<i>Pages</i>
1931 to 1938 . . .	33 . . .	968-77

1969-70 . . .	56 . . .	1077-81
1970-71 . . .	57 . . .	1053-59
1971-72 . . .	58 . . .	1049-54

For Australia the 1972-73 financial year was a period of remarkable change. This was most evident in labour market fluctuations where unemployment reached the highest level registered for more than a decade, followed by a strong decline during the second half of the year which was complemented by a rapid increase in the number of job vacancies. Seasonally adjusted, there were 105,678 registered unemployed at the end of June 1972, rising to 118,665 at the end of August followed by a decline to 89,470 at the close of the financial year. Registered job vacancies, seasonally adjusted, more than doubled during the year to reach 70,138 at the end of June 1973.

The overall production performance of the economy can be summarised in the growth in gross domestic product at constant prices. This rose by 3.8 per cent in 1972-73, compared with increases of 3.2 per cent in 1971-72 and 4.1 per cent in 1970-71. Gross non-farm product at constant prices increased by 5.2 per cent, compared with increases of 2.9 per cent and 4.5 per cent in 1971-72 and 1970-71 respectively. Gross farm product at constant prices fell by 10.1 per cent, compared with increases of 6.4 per cent in 1971-72 and 0.5 per cent in 1970-71.

While gross domestic product at constant prices increased by 3.8 per cent, the increase in Australia's command over goods and services was greater than this because of improvement in the terms of trade. Because of the higher prices for farm output, the change in economic conditions in the farm sector is better indicated by the 39 per cent increase in farm product at current prices.

Inflation continued to be of major concern during 1972-73. The strong world demand and some restrictions on supplies acted to raise prices generally and for food and raw materials in particular. Acting against this were the increased productivity during the upswing in activity and the currency appreciations taking effect in the latter half of the year. The movement of the Consumer Price Index indicates that the rise in prices in the twelve months to June 1973 was 8.2 per cent, compared with 6.2 per cent in the same period in 1971-72. Food and clothing and drapery registered the largest price increases of 14 per cent and 8 per cent respectively.

The growth in wages, salaries and supplements in 1972-73 remained at about the 1971-72 rate of 11.6 per cent, compared with an increase of 14.8 per cent in 1970-71. Average employment (in male-unit terms) increased by about 2½ per cent in 1972-73, compared with an increase of about 1½ per cent in the preceding year. The growth in average earnings decreased from about 10 per cent in 1971-72 to about 9 per cent in 1972-73.

Farm income increased by 65 per cent in 1972-73, mainly as a result of large increases in the prices of wool and other pastoral products. Although the quantity of wool production decreased by 14 per cent its value increased by 88 per cent, and increased its share of total gross value of farm

production from 17 per cent to 25 per cent. The value of other pastoral products increased by 46 per cent while smaller increases were recorded by sugar cane and dairy products, poultry, etc. Adverse climatic conditions resulted in poor harvests in wheat and other grains and their value of production decreased slightly.

There was a marked increase in demand in 1972-73. Gross national expenditure at constant prices increased by 3.6 per cent, compared with an increase of 1.3 per cent in the preceding year. Factors contributing to this overall growth were increased growth rates of private and government final consumption expenditure, while they were partially offset by decreased rates of growth in private and public capital expenditure.

In 1972-73 exports of goods and services increased by 23 per cent (5½ per cent at constant prices) while imports of goods and services increased by only 3 per cent (5 per cent at constant prices), reflecting Australia's vastly improved terms of trade. This resulted in a surplus on goods and services of \$1,571 million, compared with \$403 million in 1971-72. The balance on current transactions resulted in net lending to overseas of \$955 million in 1972-73, compared with a net borrowing of \$140 million in 1971-72.

Exports of goods rose sharply to \$6,002 million, an increase of 27 per cent over the 1971-72 figure. Increases in wool, beef and veal exports accounted for 70 per cent of the increase in exports. The value of exports of coal, iron and steel and transport equipment also rose substantially. Exports of services only increased by 4 per cent in 1972-73. Imports of goods was almost stationary, for the second year in succession, rising by only \$5 million to \$3,796 million. Imports of machinery, petroleum and petroleum products fell, while imports of paper and textile manufactures, manufactured articles and transport equipment (including six F111 aircraft) rose. Imports of services increased by 9 per cent due mainly to increases in transportation (up 7 per cent) and travel (up 24 per cent).

In response to a continually high capital inflow during early 1972-73 and a rapidly increasing volume of international reserves, several important exchange control measures were introduced on 26 September 1972. On 23 December further measures to dampen the level of capital inflow were announced, and at the same time the Australian dollar was revalued. The parity of the Australian dollar, expressed in terms of the U.S. dollar, was appreciated by 4.85 per cent. The market rate was fixed at the new parity, giving an overall appreciation of 7.05 per cent. As a result of the devaluation of the U.S. dollar by 10 per cent on 13 February 1973, plus the floating of some other major currencies since December, the Australian dollar appreciated further by a few percentage points between December and mid-February. In the remaining months of 1972-73 other currencies appreciated their exchange rates against the U.S. dollar, and, being tied to the United States dollar, the Australian dollar generally tended to depreciate.

The currency appreciation and the exchange control measures of September and December 1972 resulted in a net private capital outflow in excess of \$650 million in the second half of 1972-73, compared with a net private capital inflow of \$945 million in the first half of the year. Overall net capital inflow in 1972-73 was \$270 million, compared with \$1,960 million in 1971-72, and was the smallest since 1961-62.

In 1972-73, important new discoveries were made of deposits of oil and gas, uranium and low grade nickel-copper ores, although emphasis was on the development of known mineral deposits. Queensland's largest underground coal mine (Leichhardt) commenced production, the Redross nickel mine in W.A. was being developed for production, mining commenced at Paraburdoo and Shay Gap iron ore deposits in W.A. and at the nickel project at Carr Boyd Rocks, W.A. Iron ore mining operations at Mount Whaleback and Robe River, W.A. were being expanded and pellet production from Robe River ore will reach 4.2 million tons in 1973. Work started on two new bauxite/alumina projects based on bauxite from Darling Range, W.A.; an alumina plant at Gove, N.T. commenced production; and the capacity at the Pinjarra, W.A., alumina plant was doubled and will be further expanded.

A flash smelter for nickel concentrates was commissioned at Kalgoorlie, W.A. and one for copper at Mt Morgan, Qld. Major deposits of heavy mineral sands were delineated at Eneabba, W.A. and two large-scale mining operations are in process to develop the deposits.

Financial conditions were relatively easy in the first half of 1972-73. However the appreciation of the Australian dollar and the exchange control measures of September and December 1972 reduced the volume of overseas borrowings and increased the demands on the domestic market, causing a tightening in conditions and rising interest rates.

Deposits with financial institutions grew substantially during the year. Private non-bank deposits with trading banks in June 1973 were 32 per cent higher than in June 1972, with spectacular increases occurring during the first seven months. Savings Banks deposits in June 1973 were 22 per cent higher than in the previous June. The increases in deposits, together with a 16 per cent increase in the

holdings of notes and coins, resulted in an aggregate rise of 26 per cent in the volume of money during 1972-73, compared with 10 per cent in 1971-72. Permanent building societies' share capital increased its previously high growth during the first seven months of 1972-73 before tapering off after January. This resulted in a sharp reduction in housing loan approvals in the last three months of 1972-73. Finance companies generally continued to expand and balances outstanding increased by about 20 per cent during the year.

Share prices dropped sharply after the sterling float began in Late June 1972 and drifted downwards for several months before picking up to reach a peak in mid-January. Prices then dropped by almost 20 per cent over the next few months, recovering slightly to end the financial year 8 per cent below their level at the beginning of the financial year.

Following the general elections in December the new Australian Government introduced a number of measures, including increases in social service pensions and unemployment and sickness benefits, and additional employment-creating grants to the States. During the year, government final consumption expenditure increased by 14½ per cent, compared with an increase of 13½ per cent in 1971-72, and cash benefits to persons increased by 24 per cent, compared with an increase of 17 per cent in the previous year. In 1972-73 State Governments received a \$112 million permanent increase to the financial assistance grants, and per capita grants to New South Wales and Victoria were permanently increased from \$2 to \$3.50 per head of population. At the June 1973 Premier's Conference the State governments accepted the Australian government's offer to take full financial responsibility for financing tertiary education from 1 January 1974.

#### 1972-73

- 1 July. Special Bonds, Series 'Y' issued at par with interest rates ranging from 5.4 to 6 per cent. An amount of \$44 million was raised for the redemption of Series 'A' to 'X'.
- 3 July. Typists, secretaries and other 'keyboard' employees in the Australian Public Service were granted salary increases ranging from 8 to 14 per cent a year.
- 4 July. Victorian building workers stopped work in support of increased wages and improved conditions.
- 7 July. Increased sick leave benefits were granted to employees under more than 600 Queensland State awards and agreements. The new entitlement increases the quantum of leave from one week to eight days a year, and allows accumulation of the leave to a maximum of 13 weeks absence in any one year.
- 11 July. Technicians and draughtsmen in the Australian Public Service were awarded an increase of \$5.60 a week, backdated to 5 June 1973.
- 14 July. A Commonwealth public loan of 10,000 million Japanese yen issued at par with interest at 6.9 per cent for a period of 10 years.
- 14 July (and during August). Plumbers in New South Wales stopped work in support of demands for increased wages.
- 2 August. The Commonwealth Arbitration Commission granted a 35 hour week to about 500 employees at shipping container depots in Sydney, Melbourne and Adelaide.
- 4 August. Drought aid previously covering Gippsland was extended to farmers in the Mallee and northern Victoria.
- 4 August. A dispute involving maintenance workers in the oil industry which began on 2 June 1972 over a log of claims including a thirty-five hour week, ended when oil companies began delivering supplies of petrol to Sydney. Final settlement was effected on 22 August with the acceptance by unions of pay and leave increases.
- 7 August. Airline ground staff in Victoria and Queensland held a stoppage in support of a claim for higher wages.
- 9 August. West Australian Police were granted increases ranging from \$297 to \$580 a year.
- 10 August. Commonwealth cash loan issued at par with interest at 4.9 per cent for 3 years 3 months, 5.75 per cent for 10 years 2 months, and 6 per cent for 19 years 2 months and 32 years 11 months. An amount of \$203 million was raised. A conversion offer was made on the same terms as the cash loan for \$219 million maturing on 15 August. An amount of \$181 million was converted.
- 10 August. The Federal Government approved increases of up to 15 per cent in fares and freight rates by the Australian National Line on its Tasmanian service.

- 13 *August*. The report of the Randall Committee, set up to investigate all aspects of wool marketing, was tabled in the House of Representatives.
- 15 *August*. The Commonwealth Budget for 1972-73 introduced into the House of Representatives. The Budget provided for estimated expenditure of \$10,077.6 million and estimated receipts of \$9,447.5 million in the year 1972-73. (Details of the 1973-74 Budget as well as the actual budget results for 1972-73 are shown in the Appendix). In 1971-72 receipts of the Commonwealth were \$8,845.4 million, and expenditure amounted to \$9,032.3 million. The main items of revenue (1970-71 figures shown in parenthesis) were: income taxes \$5,303.7 million (\$4,621.8 million); excise duties \$1,212.0 million (\$1,053.3 million); sales tax \$682.8 million (\$633.2 million); customs duties \$467.9 million (\$465.7 million); and payroll tax \$99.1 million (\$295.4 million). The main items of expenditure were: payments to or for the States, and works and housing programs \$3,054.7 million (\$2,843.3 million); payments to the National Welfare Fund \$1,752.2 million (\$1,477.2 million); defence services \$1,217.1 million (\$1,135.0 million); departmental running expenses \$640.8 million (\$543.8 million); advances for capital purposes \$492.7 million (\$448.5 million); Commonwealth payments to industry \$402.1 million (\$316.7 million); repatriation services \$352.4 million (\$314.4 million); and external economic aid \$184.1 million (\$163.1 million).
- 15 *August* (and during September). Nationwide stoppage of metal tradesmen in support of increased wages.
- 15 *August*. The Chairman, Australian Wheat Board announced the sale of a further 250,000 tons of wheat to Chile, making a record annual total of 600,000 tons.
- 18 *August*. (and during September) Manufacturing chemists in various States held a stoppage in support of higher wages.
- 22 *August*. Australian Wheat Board announced the sale of 1 million tons of wheat to the U.S.S.R.
- 23 *August*. Federal Government announced that the amount spent on Universities and Colleges of advanced education in the 1970-72 triennium would be increased by \$200 million for the 1973-75 triennium.
- 24 *August*. The Prime Minister announced that the Federal Government would not revalue the Australian dollar.
- 31 *August*. 1972-73 South Australian Budget introduced, providing for a deficit of \$7,518,000; it was estimated that revenue would be \$509,235,000 and expenditure \$516,753,000. In 1971-72 revenue amounted to \$455,245,000 and expenditure to \$456,311,000 leaving a deficit of \$1,066,000.
- 5 *September*. Queensland Public Servants were awarded a salary increase of 5 per cent a year.
- 7 *September*. 1972-73 Tasmanian Budget introduced, providing for a deficit of \$2,969,000. It was estimated that revenue would be \$175,733,000 and expenditure \$178,702,000. In 1971-72 revenue amounted to \$157,782,000 and expenditure to \$160,237,000, resulting in a deficit of \$2,455,000.
- 11 *September*. Government Advisory Committee on Science and Technology chosen; this committee will assess on a continuing basis Australia's civil-science and technology requirements, resources and potential.
- 11 *September*. Membership of the taxation enquiry committee announced.
- 12 *September*. 1972-73 Victorian Budget introduced, providing for total receipts and expenditure of \$1,362,305,000. Revenues for financing loan programs were estimated at \$261,305,000 (including Commonwealth capital grant payment of \$66,810,000) and loan expenditure were estimated to total \$243,505,000.
- 12 *September*. Metal trade workers accepted an offer of an immediate wage increase of \$3 a week with a further \$3 a week increase in June 1973. These increases subsequently were awarded to workers in other industries.
- 15 *September*. Salary increases of between \$212 and \$489 a year were offered to Australian Public Service Fourth Division Clerical Officers. The increase operated from 5 October 1973.
- 22 *September*. Salaries of clerical and administrative officers in the New South Wales Public Service were increased by  $7\frac{1}{2}$  per cent a year.
- 27 *September*. 1972-73 New South Wales Budget introduced, providing for an overall deficit of \$9,544,000 after allowing for the net results of business undertakings; it was estimated that the receipts and expenditure, excluding business undertakings would be \$1,311,496,000 and \$1,316,120,000 respectively. In 1971-72 the overall deficit was \$5,485,000 while revenue and expenditure, excluding business undertakings, amounted to \$1,112,764,000 and \$1,117,776,000 respectively.

- 28 September. 1972-73 Queensland Budget introduced. It was estimated that revenue would be \$674,560,000 and expenditure \$679,170,000 leaving a deficit of \$4,610,000. In 1971-72 revenue amounted to \$595,218,000 and expenditure to \$592,506,000 leaving a surplus of \$2,712,000.
- 28 September. Australian Wheat Board announced that it had concluded a contract to supply one million tons of wheat to the People's Republic of China.
- 1 October. A conversion offer of Special Bonds Series "Y" was made for \$70 million Special Bonds Series "L" maturing on 1 October. An amount of \$39 million was converted.
- 3 October. The Western Australian Budget for 1972-73 introduced. It was estimated that revenue would be \$469,444,000 and expenditure \$474,521,000 leaving a deficit of \$5,077,000. In 1971-72 revenue amounted to \$423,999,000 and expenditure to \$424,890,000 leaving a deficit of \$891,000.
- 3 October. The Tariff Board published a blue print for the systematic appraisal of the tariff structure, the first since Federation. The review is expected to take six years.
- 5 October (and during November and December). Queensland construction workers stopped work in support of higher wages and improved conditions.
- 7 November. Special Bonds Series 'Z' issued at par with interest rates ranging from 5.4 to 6 per cent maturing on 1 January 1983. An amount of \$48 million was raised of which \$31 million was for the redemption of Series 'A' to 'Y'.
- 8 November. New South Wales teachers were awarded salary increases ranging from \$301 to \$956 a year, backdated to 11 September 1972.
- 9 November. The *Companies (Foreign Takeovers) Act* 1972 came into force.
- 14 November. Commonwealth cash loan issued at par with interest at 4.8 per cent for 2 years 6 months, 5.7 per cent for 9 years 3 months, and 6 per cent for 19 years 11 months and 32 years 8 months. An amount of \$330 million was raised. A conversion offer was made on the same terms as the cash loan for \$243 million maturing on 15 November. An amount of \$219 million was converted.
- 15 November. Teachers in South Australia were awarded salary increases ranging from \$5.80 to \$20.90 a week.
- 21 November. Federal Government used the Foreign Takeovers Act to freeze a number of takeover bids.
- 24 November. Victorian Government blue-collar employees were granted an extra three days paid leave during the Christmas-New Year period.
- 4 December. Following the Federal Election for the House of Representatives the Australian Labor Party became the Government for the first time since 1949.
- 5 December. Commonwealth Police were granted pay rises ranging from \$9 to \$17 a week.
- 7 December. The new Labor Government removed the excise duty on wine.
- 7 December. Nationwide stoppage of airline pilots in support of claims for higher salaries. They returned to work after two days.
- 8 December. Bank officers throughout Australia (except Commonwealth Bank employees), were offered a 5 per cent a year salary increase from 1 January 1973 and a further 4 per cent from 1 June 1973.
- 11 December. South Australia received \$7 million from the Federal Government for unemployment programs. Subsequently similar grants were made to other States. The grants totalled approximately \$50 million.
- 12 December. Following the Government's announcement that liability for call-up under the National Service Act had ended, about two-thirds of National Servicemen elected to remain in the Army thus qualifying for the Federal Government's special benefits—\$1,000 for re-engagement and eligibility for a War Service Home.
- 14 December. South Australia Long Service Leave legislation granted employees under State awards 13 weeks long service leave after 10 years service, and removed the requirement that at least 5 years must be served as an adult before the employee is entitled to pro rata leave. The new legislation came into force 1 July 1973.
- 15 December. The Commonwealth Conciliation and Arbitration Commission outlined the principle of 'equal pay for work of equal value' for adult and junior females. The Commission stated that the principle meant the fixation of award wage rates by a consideration of the work performed irrespective of the sex of the worker. (See page 267.)
- 18 December. New South Wales shop assistants accepted a \$3.50 a week wage increase with a further \$1.50 a week increase in March.

- 20 *December*. Blue collar railway employees in New South Wales, Victoria, South Australia and Tasmania were awarded pay increases ranging from \$3.50 to \$10 a week with a further increase of \$3 a week in July 1973.
- 23 *December*. Further measures to dampen the level of capital inflow were announced, and at the same time the Australian dollar was revalued. The parity of the Australian dollar, expressed in terms of the U.S. dollar, was appreciated by 4.85 per cent. The market rate was fixed at the new parity, giving an overall appreciation of 7.05 per cent.
- 23 *December*. The Government of the United States of America suspended meat imports quotas for 1973.
- 26 *December*. Federal Government reduced Australia's immigration target by 30,000 to 110,000 for 1972-73.
- 1 *January*. The Australian Wool Corporation, formed by amalgamating the Wool Board and the Wool Commission, became operative.
- 3 *January* (and during February). Paper industry employees in various States held stoppages in support of claims for a new award.
- 15 *January*. South Australia Police were granted pay rises ranging from \$356 to \$606 a year.
- 19 *January*. Teachers in South Australia were granted salary increases of 8 to 10 per cent a year under a new award to take effect from 1 February 1973.
- 25 *January*. The Premiers of Victoria and New South Wales and the Prime Minister agreed that the Albury-Wodonga area would be developed as a new growth complex. Land prices in the proposed growth complex in the Albury-Wodonga area were frozen at the 3 October 1972 levels.
- 1 *February*. The United Kingdom-Australia Trade Agreement terminated.
- 6 *February*. A 15 per cent wage increase was granted to shearers and shearing shed hands covered by the Commonwealth Pastoral Industry Award.
- 7 *February*. Engineers and related workers in Federal Government departments, the ABC, the CSIRO and the Snowy Mountains Hydro-electric Authority were granted an 8 per cent pay rise.
- 9 *February*. Teachers in Western Australia were awarded a salary increase of approximately 8 per cent a year.
- 9 *February*. Following the request by BHP to the Australian Government for an inquiry into steel prices, Mr Justice Moore recommended an increase of 3 per cent in the price of steel which was accepted by BHP pro tem.
- 12 *February*. The Reserve Bank ordered the suspension of foreign exchange dealings due to a world monetary crisis caused by the weakness of the \$US.
- 13 *February*. The United States of America devalued its currency by 10 per cent by raising the official price of gold from \$US38.00 to \$US42.22 per oz; Japan allowed the yen to float.
- 13 *February*. Commonwealth cash loan opened on same terms as cash loan of 14 November 1972. An amount of \$166 million was raised of which \$30 million was for the redemption of loans maturing on 15 February. A conversion offer was made on the same terms for \$176 million maturing on 15 February. An amount of \$117 million was converted.
- 13 *February*. An application by workers in the Electricity supply industry for a 35 hour week was rejected by the Industrial Commission of New South Wales.
- 13 *February*. The Australian Bank Officers Association gained an extra week's annual leave from January 1974.
- 14 *February*. The OECD's report on the Australian economy was issued.
- 19 *February* (and during March). Chemical workers in various States held stoppages in support of wage increases.
- 19 *February*. The Queensland basic wage was increased by \$1.30 to \$42.30 for adult males and by \$1.00 to \$32.85 for adult females. The minimum wage for adult males rose by \$1.30 to \$52.80 a week.
- 20 *February* (and during March). Zinc miners in Tasmania held a stoppage in support of wage increases.
- 21 *February*. It was announced that a National Pipeline Authority would be established to build a natural gas pipeline system across Australia.
- 21 *February*. A new Armed Services pay and allowances scheme was approved. It became effective from 8 February.

- 23 *February*. The Government amended the Customs (Prohibited Exports) Regulations to give it power to impose export controls on all minerals, either in raw or semi-processed form.
- 28 *February*. First session of the 28th Parliament opened.
- 8 *March*. Queensland Police were granted pay increases ranging from \$7.42 to \$29.38 a fortnight, operative from January 1973.
- 21 *March*. (and during April) Victorian and Queensland meat workers stopped work in support of wage claims.
- 30 *March*. The salaries of Federal parliamentarians were substantially increased.
- 1 *April*. Clothing trade employees in all states were awarded increases from \$1 to \$4 a week to operate as from the first full pay period commencing on or after 1 April 1973.
- 3 *April*. The Australian Government appointed a special task force headed by Dr H. C. Coombs to "apply a close scrutiny to continuing policies of the previous Government so that room may be found for our own higher priority programs".
- 9 *April*. Federal Government ordered the Reserve Bank to freeze \$100 million in trading bank funds through the SRD account by an increase in SRD ratio from 6.6 per cent to 7.6 per cent.
- 11 *April*. (and during May) Victorian brickmakers stopped work in support of higher wages.
- 18 *April*. Public Service Act 1973 granted Australian Government employees four weeks paid annual leave operative from 1 January 1973. Subsequently State government employees in Victoria, Queensland, Tasmania and Western Australia received similar benefits.
- 1 *May*. (and during June) New South Wales metal workers stopped work in support of wage claims.
- 7 *May*. The tax concession on calls, or other capital moneys paid by investors in mining and prospecting was withdrawn.
- 8 *May*. National Wage Case decision resulted in an increase in Commonwealth award wages of 2 per cent plus \$2.50 a week. The rates of minimum wage for adult males were increased by \$9 a week. These increases operated from the first pay period commencing on or after 29 May. Subsequently similar increases operated in State awards in all States (*see* page 1077) except Queensland and Western Australia (*see below*).
- 9 *May*. Special Bonds, Series "2A" issued at par with interest rates ranging from 5.8 to 6.3 per cent. An amount of \$17 million was raised of which \$10 million was for the redemption of Series "A" to "Z".
- 10 *May*. (and during June) Statewide stoppage by Queensland electricians in support of a claim for higher wages.
- 15 *May*. Commonwealth cash loan issued at par with interest at 5.6 per cent for 2 years 3 months, 6.2 per cent for 10 years 2 months, 6.5 per cent for 20 years 5 months and 30 years 2 months. An amount of \$81 million was raised. A conversion offer was made on the same terms as the cash loan for \$81 million maturing on 15 May. An amount of \$71 million was converted.
- 16 *May*. (and during June) New South Wales builders labourers stopped work in support of demands for permanency of employment.
- 18 *May*. (and during June) In Victoria, vehicle industry workers stopped work in support of increased wages. The dispute spread to other States.
- 23 *May*. The sale of 50,000 tons of sugar to the People's Republic of China on commercial terms was announced.
- 23 *May*. Nurses in Victoria will receive a 10 per cent pay increase from 1 July 1973 and a further 7 per cent from March 1974.
- 24 *May*. Australia and the People's Republic of China agreed to grant each other 'most-favoured-nation' treatment in trade agreements.
- 29 *May*. After negotiation Australia's iron ore producers won about \$80 million a year compensation from Japanese buyers over losses caused by the devaluation of the \$US.
- 29 *May*. Queensland Basic Wage rates were increased by \$1.90 a week for adult males and by \$2.05 a week for adult females. Margins in awards were increased by 2 per cent and the minimum wage for adult males was increased by \$7.70 a week.
- 1 *June*. The *Prices Justification Act* 1973 was assented to, it created a Prices Justification Tribunal which will review individual price increases by companies which have an annual turnover of more than \$20 million. The Act was operative from 1 August 1973.

- 3 June. One day Statewide stoppage by New South Wales electricity supply workers in support of claims for a 35 hour week. Sporadic stoppages followed throughout the month.
- 4 June. (and during July). Queensland meat workers held stoppages in support of various claims.
- 8 June. In Western Australia the basic wage for adult males was increased by \$3.55 a week and by \$3.60 a week for adult females. The minimum wage for adult males was increased by \$3.50 a week.
- 14 June. Legislation amending the Income Tax Assessment Act concerning deductions for life insurance premiums and superannuation contributions became effective.
- 17 June. An Annual Leave loading of  $17\frac{1}{2}$  per cent on award rates was awarded to employees covered by the Metal Trades Award 1952.
- 18 June. Maternity Leave Act granted women employees in the Australian Public Service twelve weeks maternity leave on full pay, with up to additional forty weeks leave without pay. Male employees became eligible for one weeks leave on full pay at the time of the birth of a child.
- 26 June. Government approval was given for a production run of 50 Nomad aircraft.
- 29 June. Commonwealth cash loan opened on same terms as the cash loan of 15 May. An amount of \$91 million was raised.

## APPENDIX

Some recent information which has come to hand since the various chapters were sent to press is given in summarised form in the following pages, but for later statistics on the subjects dealt with in chapters reference should in general be made to other publications issued by this Bureau, e.g. the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics*, the *Digest of Current Economic Statistics*, and the various mimeographed statements issued on particular subjects.

### CHAPTER 3. GENERAL GOVERNMENT

#### Parliamentary government

##### SECOND WHITLAM MINISTRY—30 NOVEMBER 1973

(The State in which each Minister's electorate is situated is shown in parenthesis. All Ministers are members of the Australian Labor Party and all are in the Cabinet.)

##### *Prime Minister—*

THE HON. E. G. WHITLAM, Q.C., M.P.  
(N.S.W.)

##### *Deputy Prime Minister and Minister for Defence—*

THE HON. L. H. BARNARD, M.P. (Tas.)

##### *Minister for Overseas Trade—*

THE HON. J. F. CAIRNS, M.P. (Vic.)

##### *Minister for Social Security—*

THE HON. W. G. HAYDEN, M.P. (Qld)

##### *Treasurer—*

THE HON. F. CREAN, M.P. (Vic.)

##### *Leader of the Government in the Senate, Attorney-General and Minister for Customs and Excise—*

SENATOR THE HON. L. K. MURPHY, Q.C.  
(N.S.W.)

##### *Minister for Foreign Affairs—*

SENATOR THE HON. D. R. WILLESEE (W.A.)

##### *Minister for the Media—*

SENATOR THE HON. D. MCCLELLAND (N.S.W.)

##### *Minister for Northern Development and Minister for the Northern Territory—*

THE HON. R. A. PATTERSON, M.P. (Qld)

##### *Minister for Repatriation and Minister Assisting the Minister for Defence—*

SENATOR THE HON. R. BISHOP (S.A.)

##### *Minister for Services and Property and Leader of the House—*

THE HON. F. M. DALY, M.P. (N.S.W.)

##### *Minister for Labour—*

THE HON. C. R. CAMERON, M.P. (S.A.)

##### *Minister for Urban and Regional Development—*

THE HON. T. UREN, M.P. (N.S.W.)

##### *Minister for Transport—*

THE HON. C. K. JONES, M.P. (N.S.W.)

##### *Minister for Education—*

THE HON. K. E. BEAZLEY, M.P. (W.A.)

##### *Minister for Tourism and Recreation, Vice-President of the Executive Council and Minister Assisting the Treasurer—*

THE HON. F. E. STEWART, M.P. (N.S.W.)

##### *Minister for Aboriginal Affairs—*

SENATOR THE HON. J. L. CAVANAGH (S.A.)

##### *Minister for Primary Industry—*

SENATOR THE HON. K. S. WRIEDT (Tas.)

##### *Minister for the Capital Territory—*

THE HON. G. M. BRYANT, E.D., M.P. (Vic.)

##### *Minister for Minerals and Energy—*

THE HON. R. F. X. CONNOR, M.P. (N.S.W.)

##### *Minister for Immigration—*

THE HON. A. J. GRASSBY, M.P. (N.S.W.)

##### *Minister for Housing and Construction—*

THE HON. L. R. JOHNSON, M.P. (N.S.W.)

##### *Minister for Secondary Industry and Minister for Supply—*

THE HON. K. E. ENDERBY, M.P. (A.C.T.)

##### *Postmaster-General, Special Minister of State and Minister Assisting the Prime Minister—*

THE HON. L. F. BOWEN, M.P. (N.S.W.)

##### *Minister for Health—*

THE HON. D. N. EVERINGHAM, M.P. (Qld)

##### *Minister for the Environment and Conservation—*

THE HON. M. H. CASS, M.P. (Vic.)

##### *Minister for Science and Minister Assisting the Minister for Foreign Affairs in matters relating to Papua New Guinea—*

THE HON. W. L. MORRISON, M.P. (N.S.W.)

## THE HOUSE OF REPRESENTATIVES, page 72

Consequent on the resignation of the Hon. N. H. Bowen, Q.C. (L.P.), Mr P. M. Ruddock (L.P.) was elected to fill the vacancy for the division of Parramatta in the House of Representatives.

## Commonwealth referendums, page 73

Two referendums on proposals for the amendment of the Constitution were submitted to the electors for approval on 8 December 1973. The first was to enable the Australian Parliament to control prices and the other was to enable the Australian Parliament to legislate with respect to incomes. Both proposals were rejected by the electors in all States. *See* page 73 for requirements for alteration of the Constitution.

A summary of the results of the voting on each proposal follows.

## CONSTITUTION ALTERATION REFERENDUMS, 8 DECEMBER 1973

State	Electors enrolled	Number of votes		Informal	Total
		In favour of the proposed law	Not in favour of the proposed law		
CONSTITUTION ALTERATION (PRICES) REFERENDUM					
New South Wales . . .	2,827,989	1,257,499	1,332,485	28,689	2,618,673
Victoria . . .	2,129,494	891,144	1,081,120	29,660	2,001,924

## Commonwealth Government Departments, pages 73-9

On 30 November 1973 the following changes in the structure of certain Departments were made:

abolition of the Departments of Air, the Army and the Navy and their amalgamation with the Department of Defence;

abolition of the Department of Civil Aviation and its amalgamation with the Department of Transport;

abolition of the Department of Housing and its amalgamation with the Department of Works to form the Department of Housing and Construction;

abolition of the Department of External Territories and the transfer of matters pertaining to aid, and to Papua New Guinea, to the Department of Foreign Affairs.

## CHAPTER 10. LABOUR, WAGES AND PRICES

### Determination of wage rates in Australia

On 8 May 1973, the Commonwealth Conciliation and Arbitration Commission, in its decision in the National Wage Case 1972-73, increased total wage rates for adult males and adult females in Commonwealth awards by 2 per cent plus \$2.50 a week and increased the rates of minimum wage for adult males by \$9.00 a week. These increases were operative from the beginning of the first pay-period commencing on or after 29 May 1973.

Subsequent to this decision, wage rates prescribed in State awards, etc., were increased as follows.

In New South Wales weekly rates of wages in State awards were increased by 2 per cent plus \$2.50 from the beginning of the first pay-period to commence on or after 29 May 1973. These increases incorporated basic wage increases of \$3.30 a week for adult males and \$3.10 a week for adult females to operate from 29 May 1973.

In Victoria total wages for adult males and for adult females in wages board determinations were increased by 2 per cent plus \$2.50 a week and the minimum wage for adult males by \$9.00 a week to operate from the beginning of the first pay-period commencing on or after 29 May 1973.

Queensland State basic wage rates were increased by \$1.90 a week for adult males and by \$2.05 a week for adult females, margins in awards were increased by 2 per cent and the minimum wage for adult males was increased by \$7.70 a week as from 29 May 1973.

In South Australia the living wage for adult males was increased by \$3.30 a week, the living wage for adult females by \$3.10 a week, marginal rates of pay were effectively increased by 2 per cent, and the minimum wage for adult males was increased by \$9.00 a week. These increases were operative from the beginning of the first pay-period commencing on or after 29 May 1973.

In Tasmania margins in State wages board determinations were increased by 2 per cent of the sum of the basic wage and margin; basic wages for both adult males and adult females were increased by \$2.50 a week; and the minimum wage for adult males was increased by \$9.00 a week. These increases operated from the beginning of the first pay-period commencing on or after 29 May 1973.

In Western Australia the basic wage for adult males was increased by \$3.55 a week, the basic wage for adult females by \$3.60 a week, and the minimum wage for adult males by \$3.50 a week. These increases were operative on and from 8 June 1973.

### Leave

The *Maternity Leave (Australian Government Employees) Act* 1973, assented to on 18 June 1973, granted women employees in the Australian Public Service 12 weeks maternity leave on full pay, with up to an additional 40 weeks leave without pay. Male employees became eligible for one week's leave on full pay at the time of the birth of a child; the Act operated retrospectively from 1 January 1973.

## CHAPTER 13. WELFARE SERVICES

### Age, invalid, widows' pensions, unemployment and sickness benefits

Legislation which received Assent on 6 March 1973 increased age, invalid and widows' pensions, unemployment and sickness benefits to the one common rate of \$21.50 (single) or \$37.50 (married) per week. This represented an increase of \$1.50 in the maximum weekly age, invalid and (formerly Class 'A') widows' pensions and unemployment and sickness benefits. Abolition of the division of widows into three categories of entitlement meant an increase of \$4.25 a week for former Class 'B' and Class 'C' widows. Unemployment and sickness benefits and invalid pensions for minors were also raised to the standard \$21.50 rate, an increase of \$8.50 in the maximum weekly payment. All pension increases were retrospective to 7 December 1972. Unemployment and sickness benefits increases applied from 1 March 1973.

The legislation also abolished the age limits of 16 years for full-time student dependants of unemployment and sickness beneficiaries, and 21 years for full-time student dependants of age, invalid and widow pensioners.

## CHAPTER 18. PUBLIC FINANCE

## Federal Budget 1973-74

(see page 1070 for particulars of the 1972-73 Budget)

A significant feature of 1973-74 budget of the Australian Government was its presentation in national accounts form, with outlays classified on a functional basis. A functional classification is intended to bring together outlays with similar objectives or purposes to reveal more fully the broad purposes of public sector spending, to indicate the share of total resources available to public authorities being devoted to particular avenues of expenditure, and to provide a framework for developing assessments of the effectiveness of outlays in meeting government policy objectives. Taken together with the presentation on a national accounts basis the functional classification also facilitates assessment of the economic impact of the identified programs of expenditure.

Given an economy that was operating at close to full capacity, with inflation already of some concern, the Treasurer was faced with the problem of framing a budget that transferred resources to the private sector to initiate major social programs, without adding to the pressures of demand. The budget provided for an estimated outlay of \$12,168 million (18.9 per cent higher than 1972-73) and estimated receipts of \$11,481 million (20.6 per cent higher than 1972-73). The overall budget deficit was estimated at \$687 million, compared with \$709 million in 1972-73. The estimated domestic deficit in 1973-74 was \$162 million compared with a deficit of \$215 million in 1972-73. Details of estimated budget outlay and receipts are shown in the accompanying table.

**Outlay**

On the outlay side, notable aspects were

The large increase in outlay on *Housing and community amenities* reflecting major new programs for urban and regional development, including assistance for new growth centres, sewerage, land commissions, and metropolitan area improvement programs. Provision was also made for low interest advances to the States for welfare housing purposes. Because of the proposal that mortgage interest should be tax deductible, it was decided that the Home Savings Grant Scheme should be discontinued.

The 92 per cent increase in outlay on *Education*, reflecting the Australian Government's assumption of full responsibility for tertiary education from 1974, and substantial increases in funds available for schools and pre-schools—flowing in large part from recommendations by the Interim Committee of the Australian Schools Commission.

An increase of \$1.50 per week in all social service pensions with a further increase of the same amount to be made in the autumn of 1974; and planned abolition of the means test on age pensions in the lifetime of the Parliament. Because of equity considerations it was proposed that age pensions should be taxable, but not to the detriment of those people wholly or largely dependent on the pension. Subsidy payment under the States Grants (Home Care) and Delivered Meals Subsidy Acts would be increased. Special rate repatriation benefits were to be increased by \$4.50 per week, and the general rate by \$3 per week. There were to be increases of the same amount in the autumn sitting, and at the same time the special compensation allowance was to be eliminated.

An increased outlay of 25 per cent on health, including new initiatives in health insurance, community health facilities, a program for additional hospital facilities in Sydney, Melbourne and Brisbane, a school dental scheme and a new emphasis on the health of Aborigines. The scheme providing free milk for school children was to be reduced so that it applied on a needs basis.

An increased outlay on *Economic Services*, including an increased advance to the Post Office of \$32 million, provision of \$32 million for urban transport, a net provision of \$97 million for the Gidgealpa pipeline and estimated direct assistance to industry of an additional \$72 million. At the same time butter and cheese bounty payments were to be reduced and finally phased out in 1974-75, an inspection charge was to be imposed on meat for export, the Government contribution to research undertaken by the Joint Coal Board was to be reduced and to cease by 30 June 1975, and the margin allowed under the petroleum products prices stabilisation scheme was to be increased from 3.3 cents to 5 cents per gallon.

**Receipts**

During 1973-74, the natural growth in tax revenue was expected to be about \$1,621 million (17 per cent). At the same time, discretionary measures were expected to raise an additional \$648 million. Some of the more important of these measures (in terms of their revenue effects) were:

An imposition of income tax on age pensions, reduction of concessional deductions available to life insurance companies, withdrawal of exemption of dividends paid from profits from sale of oil and natural gas and of 20 per cent of profits (and dividends paid from profits) from some mining activities, withdrawal of the allowance for investment in manufacturing plant and discontinuation of some investment and depreciation concessions to primary producers, a higher rate of tax applicable to private companies, and treatment of profits from the resale of property within one year of acquisition as assessable income.

Increased duties on tobacco products, potable spirits, motor spirit, diesel fuel and aviation fuel.

Increases in Australian Capital Territory drivers' licences and motor vehicle registration fees, increased pay-roll tax and stamp duty in the Australian Capital Territory and Northern Territory.

## LIST OF SPECIAL ARTICLES AND MISCELLANEOUS MATTER CONTAINED IN PREVIOUS ISSUES

This list refers to special articles and other more or less important miscellaneous matter which have appeared in previous issues of the Year Book but which are not included, or are included in abbreviated form only, in the present issue.

The figures below indicate, respectively, the number and page of the Year Book to which reference is made. In cases where matter was published in more than one previous issue, the volume and page for the last issue containing such matter are given. For possible revisions, however, issues immediately following the one referred to should also be consulted.

## GENERAL INDEX\*

This index is preceded by a list of the special articles, etc., which have appeared in previous issues of the Year Book. The illustrations contained in this issue are listed under the various chapters in the Contents (pages vii–xi). *Where more than one reference to a subject is given, the chief reference, wherever it has been possible to determine it, is indicated by italic type. Two references to a subject so indicated signify major, and approximately equal, importance.*

## PRINTED PUBLICATIONS

### *issued by the Central Office of the Australian Bureau of Statistics*

The publications listed below may be purchased *through the mail* from Mail Order Sales, Australian Government Publishing Service, P.O. Box 84, Canberra, A.C.T. 2600; *over the counter* from the Government Publications and Inquiry Centres in each State capital; and *through the mail or over the counter* from the Deputy Commonwealth Statistician in each State capital.

The price of each publication is shown after its title, followed by the price including postage. Air mail and overseas rates are available on application. Account, standing order or reminder service facilities may be arranged with Mail Order Sales, Australian Government Publishing Service.

In addition to printed publications, a number of mimeographed publications are available in limited numbers free of charge.

Publications dealing with *individual States only* are produced by the Deputy Commonwealth Statistician in each State.

A complete list of publications issued by the Bureau is given in *Publications of the Australian Bureau of Statistics* available free from the Commonwealth Statistician, Canberra, A.C.T. 2600.

Dates of publications are printed in *italics*. A blank space indicates the publication is to be issued shortly.

**1971 CENSUS OF POPULATION AND HOUSING—**

Bulletins. Final results of the 1971 Census of Population and Housing are being released in a series of 14 bulletins, seven of which consist of separate parts for States and Territories. For those issued to date the month of publication is shown.

**Bulletin 1. SUMMARY OF POPULATION. *July 1973. 25c each part (40c).***

- Part 1. New South Wales.
- Part 2. Victoria.
- Part 3. Queensland.
- Part 4. South Australia.
- Part 5. Western Australia.
- Part 6. Tasmania.
- Part 7. Northern Territory.
- Part 8. Australian Capital Territory.
- Part 9. Australia.

**Bulletin 2. SUMMARY OF DWELLINGS. *Sept. 1973 to Jan. 1974. 25c each part (40c).***

- Part 1. New South Wales.
- Part 2. Victoria.
- Part 3. Queensland.
- Part 4. South Australia.
- Part 5. Western Australia.
- Part 6. Tasmania.
- Part 7. Northern Territory.
- Part 8. Australian Capital Territory.
- Part 9. Australia.

**Bulletin 3. DEMOGRAPHIC CHARACTERISTICS. *Jan. 1974. 25c each part (40c).***

- Part 1. New South Wales.
- Part 2. Victoria.
- Part 3. Queensland.
- Part 4. South Australia.
- Part 5. Western Australia.
- Part 6. Tasmania.
- Part 7. Northern Territory.
- Part 8. Australian Capital Territory.
- Part 9. Australia.

**Bulletin 4. BIRTHPLACE. *Jan to Feb. 1974. 25c each part (40c).***

- Part 1. New South Wales.
- Part 2. Victoria.
- Part 3. Queensland.
- Part 4. South Australia.
- Part 5. Western Australia.
- Part 6. Tasmania.
- Part 7. Northern Territory.
- Part 8. Australian Capital Territory.
- Part 9. Australia.

**Bulletin 5. THE LABOUR FORCE. *March to April 1974. 25c each part (40c).***

- Part 1. New South Wales.
- Part 2. Victoria.
- Part 3. Queensland.
- Part 4. South Australia.
- Part 5. Western Australia.
- Part 6. Tasmania.
- Part 7. Northern Territory.
- Part 8. Australian Capital Territory.
- Part 9. Australia.

**Bulletin 6. POPULATION AND DWELLINGS IN LOCAL GOVERNMENT AREAS AND CENTRES.**

- Part 1. New South Wales, 35c (55c).
- Part 2. Victoria, 35c (55c).
- Part 3. Queensland, 35c (55c).
- Part 4. South Australia, 35c (55c).
- Part 5. Western Australia, 35c (55c).
- Part 6. Tasmania, 35c (55c).
- Part 7 and 8. Northern Territory and Australian Capital Territory, 35c (55c).
- Part 9. Australia, 50c (70c).

**Bulletin 7. CHARACTERISTICS OF THE POPULATION AND DWELLINGS—LOCAL GOVERNMENT AREAS. *Jan. to May 1974.***

- Part 1. New South Wales, \$8.00 (\$8.85).
- Part 2. Victoria, \$7.00 (\$7.85).
- Part 3. Queensland, \$6.00 (\$6.85).
- Part 4. South Australia, \$5.50 (\$6.35).
- Part 5. Western Australia, \$5.00 (\$5.85).
- Part 6. Tasmania, \$2.00 (\$2.85).
- Part 7. Northern Territory, 50c (70c).
- Part 8. Australian Capital Territory, \$2.00 (\$2.85).

**Bulletin 8. CHARACTERISTICS OF THE POPULATION AND DWELLINGS—COMMONWEALTH ELECTORAL DIVISIONS. *May 1974.* \$4.00 (\$4.85).**

**Bulletin 9. THE ABORIGINAL POPULATION. *Sept. 1973.* 40c (60c).**

**Bulletin 10. FAMILIES AND HOUSEHOLDS.**

**Bulletin 11. FERTILITY.**

**Bulletin 12. GEOGRAPHIC DISTRIBUTION.**

**Bulletin 13. MAPS. Individual maps and prices (excluding postage) are listed below. Postage and packing: 1 to 3 maps—53c; 4 to 12 maps—96c; 13 to 24—\$1.28. *Dec. 1973 to June 1974.***

- General Statistical Division map of Australia. 40c.
- General dot distribution map and rainfall belts of Australia. 40c.
- Statistical Division map for each State. 40c each.
- Capital City Statistical Division maps. 40c each (Hobart 20c).
- The Northern Territory and Urban Darwin. 20c.
